

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

TO

The Right Honourable SIR GEORGE GREY, Bart., G.C.B., Her Majesty's Principal Secretary of State for the Home Department, &c. &c. &c.

General Register Office,
Somerset House,

30th August 1856.

SIR,

I HAVE the honour to lay before you the detailed Abstracts of the Marriages, Births, and Deaths which have been registered in England and Wales during the year 1854.

The registers of that year contain the names of 319,454 persons who married, of 634,405 children born, and of 437,905 persons who died: 1,391,764 new names have thus been enrolled on the national registers. The marriages took place within the year; a few of the deaths, and a certain proportion of the births, occurred at the close of 1853; but as nearly the same numbers of the births and the deaths of 1854 are registered in the books of 1855, the births, deaths, and marriages registered in 1854 may be taken, for all ordinary purposes, to represent the numbers in that year.

The natural increase by the excess of births over deaths was 196,500, or probably still more, as through defects in the law all the births are not yet registered.

The number of immigrants into England is unknown; but the number of emigrants from the ports of the United Kingdom at which there are Government emigration agents amounted to 323,429: of whom 90,966 were ascertained to be of English origin, or, taking a due proportion of

TABLE I.—Estimated POPULATION, with the Number of MARRIAGES, BIRTHS, and DEATHS registered in England in each Year from 1838 to 1854.

| Years ended Dec. 31st. | Estimated POPULATION in England in the Middle of the Year.* | MARRIAGES. | PERSONS Married. | BIRTHS (exclusive of Still-born). | DEATHS. | Excess of Births over Deaths. |
|---------------------------|---|------------|---------------------|---|---------|-------------------------------------|

| 1848 | 17,340,492 | 138230 | 270460 | 563009 | 390633 | 168336 |
| 1849 | 17,552,020 | 141888 | 288706 | 576159 | 440639 | 137320 |
| 1850 | 17,766,129 | 153744 | 306488 | 508422 | 369665 | 224427 |
| 1851 | 17,982,249 | 154206 | 306412 | 615865 | 393396 | 220469 |
| 1852 | 18,206,627 | 158782 | 317564 | 624012 | 407135 | 216877 |
| 1853 | 18,408,213 | 164520 | 329040 | 612291 | 421097 | 191294 |
| 1854 | 18,618,700 | 159737 | 319454 | 634405 | 437905 | 196500 |

* The Population has been deduced on the assumption that the annual rate of increase was uniform; viz. 1'220 per cent. in each of the 10 years 1841-51, and 1'326 per cent. in each of the 3 years 1838-40. For 1832-54 the increase of Population has been obtained by taking the excess of births over deaths in the four quarters ending June 30th, in each year. The results, by the latter method, will probably be found now to be more correct than those deduced on the hypothesis that the population increased at the same rate in 1851-2-3-4, as it did in 1841-51.

18,678 emigrants whose nationality was not distinguished, about 96,541; of whom probably 42,160 were men, 31,565 women, 11,725 boys, and 11,091 girls.* 50,020 of the emigrants of English origin sailed for the Australian colonies and New Zealand; 6,436 for the British North American colonies; 39,951 for the United States; and 134 for all other places.

The rate of marriage was such, that to every *hundred* persons living 1·716 married, while to the same number of persons 3·407 children were born, and 2·352 persons of all ages died. The difference between the rate of birth and death was 1·055 per cent. The rates of marriage, birth, and death—which were, in round numbers *one* in 58, *one* in 29, and *one* in 43 of the population—exceeded the averages of 17 years.

MARRIAGES.

Of 159,727 marriages celebrated in the year, 134,109 were performed according to the rites of the Established Church, and 25,618 were otherwise performed; so of 100 marriages, 84 were celebrated in the churches of the Establishment, 16 in the Dissenters' chapels and elsewhere; or the proportions of the two classes were nearly 5 in churches, to 1 elsewhere. The proportions are nearly the same as the proportions in the previous year. Up to that year the marriages "not according to the rites of the Established Church" had increased from 8125 in 1841 to 26,478 in 1853; while the marriages "according to the rites of the Established Church" had increased from 114,371 to 138,042.

Of the marriages according to the rites of the Church of England, 15 were celebrated by special licence, 3811 on certificates of the superintendent registrars; 21,048 on common licences, and 105,050 after banns. The clergy in registering 4185 of the marriages did not state whether they were performed after banns, or by licence. It will be observed that the marriages after banns were as *five* to every *one* by licence. The proportion of marriages after banns to those by licence is less than it

TABLE II.—Proportion of MARRIAGES, BIRTHS, and DEATHS to the Population of England.

| Mean . . | ·816 | 1·683 | 3·270 | 2·245 | 123 | 61 | 31 | 45 |

NOTE.—The Table may be read thus:—In the year 1838 to every 100 persons living there were ·771 marriages or 1·542 persons married, 3·029 births, 2·238 deaths; the number of persons living to every marriage, person married, birth or death, was 180, 65, 33, and 45 respectively. By disregarding the decimal points the Table will show the proportion to every 100,000 persons living. A correction for increase of population has been made in calculating the above results.

* The ages of only 308,649 of the emigrants of the United Kingdom are distinguished in the returns of the Commissioners' Report (1855), for the year 1854, pp. 68–9. Of the 308,649, the *men* were 134,789, the *women* 100,918, the *boys* 32,199, the *girls* 30,170, besides 10,573 infants of undistinguished sex. Of 14,780 persons the ages and sexes were undistinguished.

has ever been in any year, except 1847, since 1841; and it is evident that the pressure of the high prices of provisions, and of other circumstances, depressed the poorer classes of society more than the classes who usually marry by licence. Upon comparing the proportional numbers of marriages by licence and after banns; it appears that when the price of wheat is low or moderate the proportion of marriages by banns preponderates to the greatest extent.

In the subjoined Table (a) it is assumed that the marriages by licence represent the marriages of the higher and middle classes of society, and that those after banns represent the marriages amongst artizans and labourers.

If the facts for the 14 years are arranged in the order of the prices of wheat, it is seen that the marriages among the higher classes were relatively rather more frequent in the five years when the prices were highest than in the five years when the prices were lowest; while the marriages were most frequent among the classes who marry by banns, when the prices of wheat were low; and as these classes are the most numerous, they regulate the general result.

There is less fluctuation in the marriages of the rich than in the marriages of the poor, and the rise has hitherto not been simultaneous in the two classes; so that the difference in the proportion of marriages by banns and marriages by licence is a very sensitive test of the condition of the lower classes. This will be evident on inspecting the Table (b), in which the facts are arranged in the order of the prices of wheat; and where it will be observed that, notwithstanding several irregularities, there is a general correspondence between the figures in the columns 3 and 6.

The cost of the marriage licence is on an average about 50s., while the usual fee for the publication of banns is *one* shilling; and the other marriage fees vary in the same direction, but not in the same proportion. If we exclude the persons married "not according to the rites of the Established Church,"—who are sufficiently well represented in respect of wealth by those who are married in the church by licence, and after banns—the population is thus voluntarily divided into two great classes, (1) those who are willing to pay 50s. for a licence, and (2) those who marry after banns; the numbers of the two classes on an average of 14 years being to each other as *one* to 5·35. In these Tables (a) and (b) the classes are designated by general terms for the sake of distinction;

TABLE (a).

| YEARS. | MARRIAGES. | | Estimated relative Number to 100 persons of all Classes living. | | Average Price of Wheat per Quarter. |
|--------|------------------------|--------------------------------------|---|--|-------------------------------------|
| | To 100 persons living. | By Banns to one Marriage by Licence. | Of Marriages in the higher and middle classes. | Of Marriages among artizans, labourers, and other classes. | |
| 1841 | ·769 | 4·940 | ·129 | ·640 | s. d. 64 4 |
| 1842 | ·737 | 5·072 | ·121 | ·616 | 57 3 |
| 1843 | ·759 | 5·490 | ·117 | ·642 | 50 1 |
| 1844 | ·801 | 5·705 | ·119 | ·682 | 51 3 |
| 1845 | ·860 | 5·799 | ·126 | ·734 | 50 10 |
| 1846 | ·861 | 5·427 | ·134 | ·727 | 54 8 |
| 1847 | ·793 | 4·977 | ·133 | ·660 | 69 9 |
| 1848 | ·797 | 5·121 | ·130 | ·667 | 50 6 |
| 1849 | ·808 | 5·429 | ·126 | ·682 | 44 3 |
| 1850 | ·860 | 5·666 | ·129 | ·731 | 40 3 |
| 1851 | ·858 | 5·591 | ·130 | ·728 | 38 6 |
| 1852 | ·872 | 5·472 | ·135 | ·737 | 40 9 |
| 1853 | ·894 | 5·293 | ·142 | ·752 | 53 3 |
| 1854 | ·858 | 4·991 | ·143 | ·715 | 72 5 |

and the facts afford some guide in estimating the relative numbers of two great classes of society, which are well marked, but are not divided by specific names. The licences cost about 54,000*l.*, the publications of banns not less than 5,400*l.* in the year.

Of the 25,618 marriages *not according* to the rites of the Established Church, 7813 were performed in the registered places of Roman Catholics, 9873 in the registered places of other Christian denominations, and 7593 in superintendent registrars' offices. 52 marriages were celebrated by Quakers, and 287 by Jews. The number of marriages in this class declined.

The Roman Catholic marriages increased from 2280 in 1844 to 8375 in 1853; and 1854 is the first year in which the rate has descended. If the marriage rate is 1 marriage to 117 of the Roman Catholic population, their numbers must be about 914,121 in England and Wales. The Roman Catholics are chiefly found in Lancashire (3096 marriages), in London (1281), in Staffordshire (530), Warwickshire (276), Cheshire (304), Yorkshire (697), Durham (336), Northumberland (193), Monmouthshire (125), and South Wales (221). South of the Thames there are few Roman Catholic marriages; and they are very thinly scattered over the North Midland, South Western, and the Eastern counties. The marriages in the registered places of other Christian denominations are more equally diffused over *England*. In *Wales*, to 6543 marriages according to the rites of the Established Church there are 3368 other marriages; of which 1985 were celebrated in the registered places of worship of Dissenters, and 1016 in superintendent registrars' offices.

Marriages of minors.—9210 men and 28,797 women, or 38,007 men and women, married under 21 years of age; so that the proportion of *minors* in 100 men who married was 5·77, in 100 women 18·03; in 100 consisting

of 50 men and 50 women in '90. The proportional number of *minors* has varied in the fourteen years 1841-1854, from 4·17 to 5·77 men, and from 13·16 to 18·03 women. During the five years 1841-45, the mean proportion of minors in 100 married varied from 8·67 to 9·00; during the five years 1850-54, the proportion varied from 10·01 to 11·90. The cause of this great increase of early marriages, whatever it may be, has come into operation chiefly since 1848; and its effects are every year increasing.

The number of young women who married under age in London, out of 100 of all ages was 11; while in the following *counties* the girls under age exceeded 20 per cent. of the whole number married: Herts 22, Bucks 23, Northampton 24, Huntingdon 26, Bedford 25, Cambridge 23, Essex 20, Cornwall 21, Stafford 29, Leicester 21, Notts 20, Lancashire 21, West Riding of York 25, Durham 24, Monmouth 22.

The number of young men who married under age, out of 100 of all ages in London was 3. In the following counties the proportions exceeded 7 young men under the age of 21: Bucks 9, Northampton 10, Huntingdon 9, Bedford 12, Cambridge 9, Stafford 10, Warwick 7, Leicester 9, Nottingham 8, Lancashire 8, West Riding of Yorkshire 8. Surrey, Kent, Hants, Middlesex, Devon, Salop, Hereford, the North Riding of Yorkshire, Northumberland, Cumberland, and Westmorland are remarkable for their deviation from the average in

the opposite direction; in none of these counties did the minors exceed 4 in 100 of the men married.

In Hereford the fewest men (2 in 100) marry under 21 years of age; in Bedford the most (12 in 100) marry under 21 years of age.

First marriages and re-marriages.—137,967 bachelors, 145,330 spinsters, 21,760 widowers, and 14,397 widows, married in the year; 6826 bachelors married widows, 14,189 widowers married spinsters, and 7571 widowers married widows. Of 100 men who married, 14 were widowers, 86 were bachelors; of 100 women, 9 were widows, 91 were spinsters. The proportional number of widows who re-married was greatest, (11) in Herefordshire, least (3) in Rutlandshire; in Hampshire, Staffordshire, Lancashire and Monmouthshire, also the widows exceed 10 in 100. The proportion of widowers who re-married was greatest in Wiltshire (16), least (10) in Middlesex.

Signatures of persons married.—47,843 husbands and 68,175 wives signed the married register with marks; 111,884 husbands and 91,552 wives wrote their names. The proportion of men who signed with marks was 30, of women 43, giving 36 in 100 as the average number of both sexes at the marriage age, who did not write.

The proportion of men who signed with marks fell from 32·7 in 1841, to 30·0 in 1854; so that the numbers of men left in this benighted state fell by 2·7 per cent. in 14 years. The women who made their marks were 48·8 per cent. of the whole number in 1841, and 42·7 per cent. in 1854. The decrease is 6·1; or 1 in every 8 of the original number. This shows that the education of the people made some progress in the years 1828–1841; but it is still deplorable to find that in the present day 30 in every 100 of the fathers, and 43 in every 100 of the mothers, of the next generation of Englishmen have been so imperfectly educated, that they do not write their names, but sign the marriage registers with marks; while many of those who write their names write very imperfectly.

One of the most acute thinkers that this country has ever produced, pointed out in 1745 the necessity of instituting a settled system of education in England. In ancient times all classes of the lay population were unable to write; but in the present age all the middle as well as the higher classes can write, and the poor children consequently who grow up deprived of this art are placed at much greater disadvantage re-

TABLE IV.—MARRIAGES. The Proportion per Cent. of *Minors* of each Sex, of Males and Females who signed the Register with Marks, and of Persons who were *Widowers* or *Widows*.

nature; for learning is the atmosphere in which the words of the wise reverberate over the souls of nations, drawing them from error and injustice to truth and righteousness.

The provision under the Poor Law against starvation is undoubtedly made at great cost to this nation; but it is a cost well incurred, for not only are many lives saved from death by accidental destitution, but the heart of the whole laboring population is sustained amidst the conflicts of life, and the property of the country enjoys a degree of security which is possessed by the property of no people where the destitute poor have no legal claim to relief.

TABLE VI.—NUMBER OF BUILDINGS REGISTERED in England and Wales for the SOLEMNIZATION OF MARRIAGES to 31st December 1854.

NOTE.—The above numbers are for the Counties proper, and not for the "Registration Counties."

By paying in the form of poor rate a portion of the profits of property, the property is enhanced in value, and the rest of the profit is enjoyed by its owners in security. That discovery was made in England some centuries ago; and it has been carried out more effectually during the present century.

The utility of a system of education, to secure the whole population against the dangers of ignorance, is as evident as the utility of a system of poor laws. This is ably argued in a discourse by the author of the "Analogy;" and no argument in his great work deserves more attention, for none is more conclusive. If the preservation of the lives of poor children is wisely provided for by a regulated legal provision, so ought also a certain provision to be similarly made for the cultivation of their intelligence: "*For the public is as much interested in the education of poor children as in the preservation of their lives.*"*

How many children have for a century, notwithstanding Butler's reasoning, been left out of the pale of education under the voluntary, or what may more appropriately be named the *casual system* is evident; and the wisdom of educating the whole of the rising generation, whether they live in Cornwall or in Northumberland, in Staffordshire or in Bedfordshire, in the most benighted county or in the county of greatest comparative light, is now self evident. But to carry out this vast purpose the casual system is unequal. It would require a century probably for the development of its resources, which even then would never reach large sections of the population; and in that time nearly every child and man now living would be dead. The voluntary system would not be superseded, but would be the necessary supplement to the established schools; as all our institutions that work most satisfactorily

* The following is the argument of Bishop Butler:—"Formerly, not only the education of poor children, but also their maintenance, with that of the other poor, was left to voluntary charities. But great changes of different sorts happening over the nation, and charity becoming more cold, or the poor more numerous, it was found necessary to make some legal provision for them. This might, much more properly than charity schools, be called a new scheme. For, without question, the education of poor children was all along taken care of by voluntary charities, more or less: but obliging us by law to maintain the poor was new in the reign of Queen Elizabeth; yet, because a change of circumstances made it necessary, its novelty was no reason against it. Now in that legal provision for the maintenance of the poor, poor children must doubtless have had a part in common with grown people. But this could never be sufficient for children, because their case always requires more than mere maintenance; it requires that they be educated in some proper manner. Wherever there are poor who want to be maintained by charity, there must be poor children who besides this want to be educated by charity. And whenever there began to be need of *legal* provision for the *maintenance* of the poor, there must immediately have been need also of some *particular* legal provision in behalf of poor children for their *education*; this not being included in what we call their maintenance. And many whose parents are able to maintain them, and do so, may yet be utterly neglected as to their education. But possibly it might not at first be attended to, that the case of poor children was thus a case by itself, which required its own particular provision. Certainly it would not appear to the generality so urgent an one as the want of food and raiment. And it might be necessary that a burden so entirely new as that of a poor-tax was at the time I am speaking of, should be as light as possible. Thus the legal provision for the poor was first settled, without any particular consideration of that additional want in the case of children; as it still remains, with scarce any alteration in this respect. In the meantime, as the poor still increased, or charity still lessened, many poor children were left exposed, not to perish for want of food, but to grow up in society, and learn everything that is evil and nothing that is good in it; and when they were grown up, greatly at a loss in what honest way to provide for themselves, if they could be supposed inclined to it. And larger numbers whose case was not so bad as this, yet were very far from having due care taken of their education. And the evil went on increasing until it was grown to such a degree as to be quite out of the compass of separate charities to remedy."—Bishop Butler's Sermon, preached at Christchurch, London, on 9th May 1745.

have a mixed character,—so the zeal of individuals and of classes in supporting their own private schools would stimulate the local parish boards of education.

If there is anything in which the holders of rated property are especially interested it is the education of the people; and to the national system, in which all are interested, all should contribute in the equitable proportion of their means.

In London 88 of every 100 husbands wrote their names, in Cumberland 84, Westmorland 82, Northumberland 80, Yorkshire (North Riding) 80. In the following counties the proportions who wrote their names were 70 and under 80 in 100: Kent, Sussex, Hampshire, Middlesex, Devon, Gloucester, Warwick, Leicester, Lincoln, Derby, Yorkshire (East Riding), Durham. In a shaded educational map these would be light counties.

In the following counties, which would be marked by dark shades, and which may be called benighted in comparison with their neighbours, less than 60 in 100 husbands wrote their names, and from 40 to 50 made their marks: Hertford, Huntingdon, Bedford, Cambridge, Essex, Suffolk, Norfolk, Salop, Stafford. In Stafford 54 husbands wrote their names, 46 made their marks; in Huntingdon 52 wrote their names, and 48 made their marks. These would be the darkest counties in an educational map of England.

The women in London are nearly as well able to write as the men; and 79 in 100 wives wrote their names. Where the women are able they write their names in due proportion to the men; and many who write very indifferently still write their names. The number who being able to write sign with a mark must be inconsiderable; and it will, at any rate, be a fair hypothesis to assume that timidity among women of the same degree of instruction operates as a constant quantity in every county; yet in some counties of England 78, in others only 40, in 100 wives wrote their names. There is no reason to believe that the women of Staffordshire or Lancashire, where 60 in 100 made their marks, are more troubled by maidenly timidity than the women of Westmorland, where 22 only in 100 made their marks in the registers.

The counties over which the darker shades fall in a map showing the educational condition of women, would be Hertford, Bucks, Northampton, Huntingdon, Cambridge, Suffolk, Norfolk, Cornwall, Salop, Worcester, Warwick, Leicester, Nottingham, Derby, and Durham; as in these counties from 40 to 50 in 100 wives made their marks: but the shade would be black over Bedford (55); Stafford (60); Chester (52); Lancaster (60); Yorkshire, West Riding (54); as in these five counties more than half of the wives made their marks in the registers instead of writing their names.

I have excluded the Welsh division from this comparison, as the proportional number of women able to write is less than in any English county; for 63 wives out of 100 in Monmouth, 64 in North Wales, and 67 in South Wales, made their marks, and only 37, 36, and 33 in 100 wrote their names. The education of the men is also very defective; in Monmouth 50, in South Wales 44, in North Wales 42 in 100 made their marks; 50, 56, and 58 wrote their names in the registers. It would not be fair to the Welsh people to refer this great defect to inferior aptitude, as it is partly the result of the great difficulties which many necessarily encounter in obtaining any literary education in the Welsh language, and to the embarrassments into which those of them fall who in their situation endeavour to acquire a practical knowledge of two languages.

It will be a happy circumstance when the men and women of England and Wales are educated, and can not only write their names and read

their Bible, but are familiar with the great works of the English classical writers, know something of common things, and are acquainted with many of the productions, the phenomena, and the laws of nature. It will be as a new revelation; for then, indeed, to them that sit in darkness light will come. Might not the produce of the intelligence which would burst forth from the people, who, down to the lowest classes, have in them the elements of all knowledge, as experience has shown, justify the expenditure? What more profitable investment

TABLE VII.—ENGLAND. BIRTHS, 1854.—NUMBER and PROPORTION of Male and Female Children born in and out of Wedlock.

| No. | REGISTRATION COUNTIES. | Male Children born. | Female Children born. | Born in Wedlock. | | Born out of Wedlock. | | Males born to every 100 Females born. | Males born in Wedlock to every 100 Females so born. | Males born out of Wedlock to every 100 Females so born. | Children born out of Wedlock to every 100 Births. |

can the nation make of a few farthings in the pound of its annual produce?

Registered buildings for the solemnization of marriages.—The number of such buildings on the register was 3560 at the end of the year 1854; and of this number 1265 belonged to the Independents, 815 to the Baptists, 594 to Wesleyan Methodists of various forms. (Table VI.)

TABLE VIII.—ENGLAND. BIRTHS 1854.—PROPORTIONAL Number of BIRTHS registered in each Registration County in the Year 1854, and in each Season of the Year, or the Number of Births in each Quarter to 1000 Births in the Average Quarter.

* In calculating the proportional number of births in the four quarters a correction has been made for the difference in the number of days in each quarter.

BIRTHS.

Births (exclusive of Still-born).—634,405 children were registered in the year; and the proportion to the population was 3·407 per cent., or nearly 1 in 29; the average of the last 17 years being 3·270, or 1 in 31. The birth-rate, therefore, exceeds the average.

Sex.—324,069 boys were born, to 310,336 girls; so to every 100 girls 104·4 boys were born. The proportion of boys is less than in the three previous years, but is greater than it was in 1850. The exact proportions from 1850 to 1854 inclusive, were 104·2; 104·7; 104·6; 105·1; 104·4.

The proportion of boys to 100 girls was in London 103; in West-morland 113 (highest); in Sussex 109; in Wilts 100; in Rutland 95. The numbers fluctuate from year to year in the same county; and by a well-established mathematical law, the fluctuations are greatest among the smallest numbers. (Table VII.)

Seasons.—160,785 births were registered in the first quarter of the year (January, February, March); 172,457 in the second quarter;

TABLE IX.—BIRTHS registered in each Quarter of the Years 1838 to 1854.

| Years. | Quarters ending the last day of | | | |

TABLE X.—ENGLAND. DEATHS.—ANNUAL RATE of MORTALITY of Males and of Females, 1838–54.

| YEARS. | DEATHS. | | Deaths of Males to 100 Deaths of Females. | Of equal Numbers living, the Number of Male Deaths to every 100 Deaths of Females. |
|------------------------------|----------------------|------------------------|---|--|
| | To 100 Males living. | To 100 Females living. | | |
| 1838 | 2·325 | 2·123 | 105 | 109 |
| 1839 | 2·275 | 2·020 | 104 | 109 |
| 1840 | 2·372 | 2·208 | 103 | 108 |
| 1841 | 2·223 | 2·083 | 108 | 107 |
| 1842 | 2·241 | 2·098 | 103 | 107 |
| 1843 | 2·203 | 2·047 | 103 | 108 |
| 1844 | 2·242 | 2·083 | 103 | 108 |
| 1845 | 2·170 | 2·012 | 103 | 108 |
| 1846 | 2·228 | 2·221 | 102 | 108 |
| 1847 | 2·246 | 2·280 | 103 | 107 |
| 1848 | 2·291 | 2·224 | 103 | 106 |
| 1849 | 2·281 | 2·445 | 101 | 106 |
| 1850 | 2·143 | 2·013 | 102 | 106 |
| 1851 | 2·276 | 2·124 | 103 | 107 |
| 1852 | 2·320 | 2·136 | 103 | 108 |
| 1853 | 2·279 | 2·201 | 104 | 106 |
| 1854 | 2·424 | 2·273 | 103 | 107 |
| Average of 17 years, 1838–54 | 2·236 | 2·164 | 103 | 106 |

The Table may be read thus:—In the year 1838 to every 100 males living there were 2·325 deaths of males; to every 100 females living there were 2·123 deaths of females; and to every 100 females who died there were 105 deaths of males. The last column shows the relative mortality of males and females; and that out of equal numbers living the deaths of males were 100 to every 100 deaths of females in 1838.

154,724 in the third quarter; and 146,439 in the fourth quarter. The proportional numbers in the four quarters of the year, if we take 1000 as the average, was 1026, 1090, 968, and 916. The proportions vary in different counties; in Dorset, Hereford, and Salop the excess that is thrown on the second quarter is the greatest. (Table VIII.)

TABLE XI.—ANNUAL RATE OF MORTALITY per Cent. in each County during the 13 Years 1842—1854.

Note.—In deducing the results given in this Table a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851, on the assumption that the increase was uniform in each year (1841—1851). Since the Census of 1851, as no satisfactory data exist for ascertaining the progress of the population, which has been much interfered with by emigration and other causes, the increase has been taken to be approximately represented by the excess of births over deaths registered in each respective year ending June 30th.

Children born out of wedlock.—40,741 children were born out of wedlock; and of that number 20,978 were boys, 19,763 were girls; so the proportion of boys was 106·1 to 100 girls, while the proportion of boys born in wedlock was 104·3 to 100 girls.

6·4 in 100 of the children born in 1854 were born out of wedlock. The proportions in the five years 1850–54, run 6·8; 6·8; 6·8; 6·5; 6·4; thus indicating a gratifying diminution in their numbers as compared with the numbers of children born in wedlock and fostered by the care of both father and mother. This may be the result of improved manners, or of the diminution of the number of young unmarried women by early marriages. The fact is in itself gratifying; and the cause of the altered proportions, whatever it might be, is in general operation all over the country.

Even Norfolk, Herefordshire, Shropshire, Nottinghamshire, Cumberland, and Westmorland, which have hitherto enjoyed an unhappy pre-eminence, show symptoms of improvement in the figures. In every 100 children born, Norfolk had 11·4 born out of wedlock in 1852, and

TABLE XII.—DENSITY OF POPULATION 1841–51, and the AVERAGE ANNUAL RATE OF MORTALITY per Cent. in each County during the 10 Years 1843–1853 (excluding 1849), arranged according to the Mortality; also the RATE OF MORTALITY per Cent. in each County in the Cholera Epidemic Years, 1849 and 1854.

* The Hectar is the unit of land measure in the Metrical system, and it is equal to a square of 100 Metres, = 109·3683 yards, to the side. It is equivalent to 2·471145 (nearly 2½) Statute Acres, or, expressed in other terms, a Statute Acre represents 4·04671 (rather more than 4-10ths) of a Hectar.

10·2 in 1854. Herefordshire in the same years returned the proportions of 10·6 and 10·3; Shropshire 9·6 and 9·4; Nottinghamshire 9·5 and 8·4; Cumberland 10·7 and 9·9; Westmorland 10·4 and 9·1.

The people of Surrey (5·8), Middlesex (5·9), Huntingdonshire (5·7), Devonshire (5·8), Cornwall (5·2), Gloucestershire (5·7), and Warwickshire (5·5), deserve especial mention, for in none of these counties were 6 in 100 children born illegitimate; and thus these counties maintain the favourable position which they have held from the commencement. (Table VII.)

The return must not, however, be considered an infallible test of the morality of the unmarried women of the several counties, for various reasons. This is measured more exactly by taking the proportion of children born out of wedlock to the number of unmarried women of the ages 15-55; as was done in my 14th annual Report (see p. xii.) Other disturbing causes interfere; and in London and in the large towns it is probable that many illegitimate children are either not registered, or are registered so as to be undistinguishable in the register from children born in wedlock.

DEATHS.

437,905 persons died in the year; and the annual rate of mortality was 2·352 per cent. In round numbers 24 in 1000, or 1 in 43, of the people

The Table may be read thus:—Of 100 Males living of the age of 35 and under 45, 1·202 died in 1845, 1·272 in 1846, and so on for other years, a correction for increase of Population having been made for each Age in each Year; and the deaths of persons whose ages were not returned have been distributed proportionally over each age. The data upon which this Table is constructed appear in this or have appeared in the previous Reports, and in the Census Report. See Census Report 1851; and the Annual Reports of the Reg. Gen., particularly the 8th and 9th.

died in the year. This is greatly in excess of the average rate, which in the last 17 years was 2·245; that is, nearly 22 in 1000, or 1 in 45, of the population. (Table X.)

The excess in the mortality was produced by an epidemic of cholera, which is described subsequently.

The mortality of males was at the rate of 2·434 per cent. on the male population, of females 2·273 per cent. on the female population; so the mortality rate of males was to that of females as 107 to 100. The fluctuation of this element in 17 years extends only from 106 to 109, the average being 108.

The *average* mortality rate of males is 2·326, of females 2·164; or for the 17 years 1 in 43 males, and 1 in 46 females. The mortality rate of each sex in 1854 was 1 in 1000 above the average. The deaths of males were to the deaths of females as 103 to 100; there being more females than males living in England.

The counties arranged in the order of their mortality rate stand as in Table XII.; in which the density of the population is also shown.

The mortality rate varies with age; it reaches a high point in early infancy, and declines till at the age of puberty, 10-15, it is at the minimum; it then rises gradually up to the age of 55; and after that age it increases rapidly, doubling every ten years.

TABLE XIV.—DEATHS registered in each Quarter of the Years 1838 to 1854.

| 1843 | 86611 | 1000 | 1096 | 1007 | 887 | 1010 |
| 1844 | 89238 | 1000 | 1183 | 966 | 896 | 1018 |
| 1845 | 87342 | 1000 | 1198 | 1021 | 837 | 994 |
| 1846 | 97379 | 1000 | 917 | 925 | 1042 | 1116 |
| 1847 | 106826 | 1000 | 1131 | 1008 | 933 | 978 |
| 1848 | 99658 | 1000 | 1201 | 996 | 877 | 925 |
| 1849 | 110310 | 1000 | 961 | 927 | 1227 | 885 |
| 1850 | 92349 | 1000 | 1067 | 1007 | 961 | 996 |
| 1851 | 98849 | 1000 | 1066 | 1006 | 926 | 1002 |
| 1852 | 101784 | 1000 | 1045 | 969 | 966 | 980 |
| 1853 | 106374 | 1000 | 1122 | 1022 | 876 | 980 |
| 1854 | 109476 | 1000 | 1036 | 940 | 1081 | 963 |

Generally the mortality under 10 years of age in 1854 exceeded the *average rate* at that age during *ten years*; at other ages the difference was not considerable; but this *average* embraces the two cholera epidemic years (1849 and 1854); and upon comparing the rates in 1854 at different ages with the rates in 1845 and 1850, it will be seen that the mortality ^{was} raised at nearly all ages by the epidemic.

The deaths in the four quarters of the year presented this unusual result in England: the numbers in July, August, September (113,843), exceeded the numbers in January, February, March (111,843). The proportions in the consecutive quarters of the year, after correcting for inequalities in the length of the months, were 1036, 940, 1031, and 993; 1000 being set down as the quarterly average.

The Reports which accompanied the returns published at the close of each quarter are reprinted in the Appendix.

The causes of death are discussed by Dr. Farr in a letter addressed to me, which is also printed in the Appendix.

I have the honour to be,

Sir,

Your faithful Servant,

GEORGE GRAHAM,

Registrar-General.

* The Districts are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts are arranged according to their local position under the Registration Counties.

| | | | | | | | | | | | | | | | | | | | | 75704 | Spinsters. |

* In the other cases the column of the Register headed "Age" is filled in by the Officiating Minister with the words "of full Age," "Minor," "Under Age," as the case may be; thus losing the additional means of identification afforded by a precise statement of the age of persons at the time of marriage.

Ages of 7580 WIDOWERS and 7580 SPINSTERS who intermarried in 1854.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

* The Districts are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 625 in number are arranged according to their local position under the Registration Counties.

† For a table of the Deaths in the principal Public Institutions situated in the Districts of London see page 85.

Note.—Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths were, in fact, less than the Deaths to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1854—DISTRICTS—continued.

NOTE.—The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose.

The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates that a Workhouse belonging to another District or Union is included.

Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated.

The Excess of Deaths over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

For the number of Deaths in the Hospitals, Workhouses, and other principal Public Institutions in London, see pp. 83-4.

I.—LONDON.—BIRTHS AND DEATHS, 1854—SUB-DISTRICTS—continued.

APPENDIX.

EXTRACTS

FROM THE

QUARTERLY RETURNS

OF

MARRIAGES, BIRTHS, AND DEATHS

Issued in the Year 1854.

NOTE.—*The numbers of Births and Deaths stated in the Quarterly Returns were furnished by the Registrars for immediate publication at the end of each Quarter, when they could not be subjected to revision at the General Register Office; they will be found, therefore, to differ, in some instances, from the more correct numbers now given in the preceding Abstracts.*

1854.]

QUARTERLY RETURN

[No. 1.]

OF

THE MARRIAGES, BIRTHS, AND DEATHS IN ENGLAND.

THIS Return comprises the BIRTHS and DEATHS registered by 2191 Registrars in all the districts of England during the winter quarter ending March 31st, 1854; and the MARRIAGES in 12039 churches or chapels, about 3479 registered places of worship unconnected with the Established Church, and 625 Superintendent Registrars' offices, in the quarter that ended December 31st, 1853.

The Return of Marriages is not complete; but the defects are inconsiderable, and approximative numbers have been supplied from the records of previous years.

The general aspect of the returns is favourable. The marriages in the last quarter of 1853 not only greatly exceeded the mean proportion, but the maximum of the previous years. In the quarter that ended on March 31st, 1854 the births exceeded the average; and the public health of the country was such that the mortality was considerably below the average of the last ten years. The improvement is chiefly in the country districts, as in the towns the deaths rather increased in proportion to the population, and are still, out of the *same population*, *one-third* part more numerous than the deaths in the surrounding country.

MARRIAGES.

The number of marriages continues to exceed the average: 97772 persons were married in the quarter ending December 31st 1853,—a greater number than has

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1842-54 and in the Quarters of those Years.

* The numbers up to 1851 have appeared in the Annual Reports.

been recorded in any corresponding period since the Registration Act came into force in 1837, and 3356 in excess of the 94416 persons who were married in the same period of 1852. On an average of December quarters of the ten years 1844-53, the proportion of marriages to every 100000 persons living was 999; in the same quarter of 1853 the proportion was 1075. In the following counties the increase in the number of marriages is most perceptible:—Sussex, Hampshire, Bedfordshire, Essex, Suffolk, Norfolk, Wiltshire, Cornwall, Gloucestershire, Shropshire, Staffordshire—where the marriages in the December quarter of the last five years have been 1743, 1770, 1782, 1892, and 2208, respectively—Worcestershire, Lincolnshire, Derbyshire, the three Ridings of Yorkshire, Durham, Northumberland, Westmorland, Monmouthshire, and South Wales. An increase is apparent in most of the large towns in the coal and iron districts of the Midland and Northern Counties, but many of the chief seats of textile manufactures exhibit a decrease: marriages fell off in Nottingham, Stockport, Great Boughton (Chester), Wigan, Bolton, Bury, Manchester, Burnley, Preston,—in which town the marriages declined from 333 to 258—and in Halifax.

BIRTHS.

160892 births were registered in the first quarter of the year 1854, being a decrease of 706 as compared with the 161598 births registered in the corresponding period of 1853. In addition to London the only counties in which an increase in the number of births appears are Surrey, Gloucestershire, Shropshire, Staffordshire, Worcestershire, Warwickshire, Leicestershire, Nottinghamshire, Cheshire, Lancashire, Durham, and South Wales.

INCREASE OF POPULATION.

The births that were registered in the quarter amounted to 160892, the deaths to 111970, leaving in the population an excess of 48,922 persons, which is increased

* The Table may be read thus, without reference to the decimal points:—In the year 1848, to 100000 of the population of England there were 798 marriages, 3249 births, 2307 deaths registered.—The annual rates of marriage in each of the 4 quarters were 661, 806, 755, and 961 per cent.; the rates of death 2794, 2313, 2006, and 2108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the 2 last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

on the one hand by the immigration of the Irish or Scotch, and diminished by the emigration of the English. The number of emigrants from the ports of England at which there are Government Emigration Officers was 46619 in the same time; and the emigrants from all the ports of the United Kingdom were 48565.

Hitherto the number of emigrants from the United Kingdom has been published in such a manner that it has been impossible to say how many were natives of England. In consequence of an instruction from the Secretary of State for the Colonies, the Duke of Newcastle, the information that has been registered for some time, in conformity with the Act of Parliament, has been abstracted, and the Registrar General is thus enabled to publish the information that he has for several years been endeavouring to obtain; for the Emigration Commissioners have supplied him with the subjoined interesting Table, showing that in 1853 the emigrants from the United Kingdom amounted to 329937; of whom it was ascertained that 128787 were adult males, 109145 were adult females, 67634 were children of 1 and under 14 years of age, and 10192 were infants. In 14179 instances no information was obtained.

In 20349 instances the native country was not stated; of the 309588 persons remaining, 192609 were natives of Ireland, 22605 of Scotland, and 62915 were natives of England,—so that of a hundred 21 (nearly) of the emigrants were English, 7 Scotch, 62 Irish, and 10 foreigners; or, of 100 emigrants natives of the United Kingdom, 23 were English, 8 Scotch, and 69 Irish.

The births in England and Wales in the year 1853 were 612341, the deaths 421775, leaving an excess of 190566 in the population which is reduced to 127651 by the subtraction of the emigrants. As a set-off against the emigrants there is a number of Irish and Scotch immigrants into England, which the Census returns show amount to many thousands annually. The population of England is therefore still increasing, but at a less rapid rate than it increased formerly.

Health of the Country.

Prices of Provisions.

The rise in the prices of the chief articles of food which was noticed in the summer and autumn quarters of 1853 has continued during the first three months of the year 1854. The average price of wheat in England and Wales was 45s. 7d. per quarter in the three first months of 1853; in the same period of the present year the price has averaged 79s. 6d. per quarter, being an increase of 75 per cent. The average *weekly* quantity sold in the cities and towns which make returns was 95115 quarters, representing an expenditure of about 216,767*l.* weekly in the quarter ending March 31st, 1853, while in the same period of the present year 60022 quarters have been sold for about 238,587*l.* Meat has been somewhat dearer; and potatoes, which averaged 127s. 6d. per ton at Waterside Market, Southwark, in the quarter ending March 31st, 1853, rose to 140s. in the same period of the present year, being an increase of 10 per cent. Meanwhile the country has been in a prosperous state, and, notwithstanding that "strikes" have prevailed in some places, the working class on the whole have been apparently well employed, at good wages.

The AVERAGE PRICES of Consols, of Wheat, Meat, and Potatoes; also the AVERAGE QUANTITY of Wheat sold and imported weekly, in each of the Nine Quarters ending March 31st, 1854.

* Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending March 31st, 1852, was 1,241,921; for the 13 weeks ending June 30th, 1,143,339; for the 13 weeks ending Sept. 30th, 1,023,251; for the 13 weeks ending Dec. 31st, 1,445,906; for the 13 weeks ending March 31st, 1853, 1,236,493; for the 13 weeks ending June 30th, 1853, 1,099,261; for the 13 weeks ending Sept. 30th, 1853, 1,119,128; for the 14 weeks ending Dec. 31st, 1853, 1,106,027; and for the 13 weeks ending March 31st, 1854, 780,282. The total number of quarters entered for Home Consumption was respectively 358,024; 710,780; 882,850; 947,310; 825,886; 1,074,095; 1,560,255; 1,191,149 (13 weeks); and 1,345,743.

STATE OF THE PUBLIC HEALTH.

The returns from all England and Wales, for the first quarter of this year, record the deaths of 111970 persons. The general result is, that while on an average of ten winter quarters 2'492 persons died annually out of 100 living, in the last

quarter the proportion was 2·481. The people were subject to rather less than the ordinary rate of mortality, and although many suffered fatally from severe weather near the commencement of the quarter, and sudden changes during its course, the class of diseases that prevail among children appears to have been more subdued.

In LONDON (I.) 16534 deaths were registered, a greater number than in any of four corresponding quarters (1850-53). The increase arises chiefly from the zymotic class of diseases, which destroyed 3254 persons. Hooping-cough was far more fatal than any other in this class, the number of deaths referred to it being 941, while to typhus, which was fatal in the next degree, the number is 582. Scarlatina is third in the order of mortality, and numbers 417; measles 344; diarrhœa 308, a number which proves that this complaint was considerably more rife than is usual in winter. Diarrhœa in the five winters produced successively 207, 223, 225, 221, and, as has been stated, 308. There were only 7 deaths from cholera in the three months. Bronchitis and pneumonia were both extensively fatal. Cancer numbered 213, 236, 231, 243, and 281 deaths in the five quarters; carbuncle 2, 3, 17, 20, 25, showing a constant increase. The deaths referred to intemperance last quarter are 29, besides 34 to delirium tremens; those to privation 12; besides 76 to want of breast-milk.

The SOUTH EASTERN DIVISION (II.) enjoyed an average amount of health. The deaths entered on its registers were 8446, which is about a thousand less than the deaths in the first quarter of 1853. Parts of Kent suffered from scarlatina, and in Maidstone and Sandgate, where it prevailed, the deaths have been above the average. The season appears to have been fatal in Tunbridge. Places on the south-east coast, about Deal and Dover, were healthy. In Hampshire, small-pox prevailed at Kingston and Southampton, especially the latter town, where it was fatal to 26 persons, many of whom were beyond the years of childhood; but the county generally was not unhealthy, and at the Isle of Wight the Registrar of Newport states that the dryness of the season had been beneficial. Scarlatina visited parts of Berkshire; it was reported at Wallingford; and also at Windsor, in January.

The SOUTH MIDLAND DIVISION (III.), in which 6547 deaths were recorded, was healthy in comparison with former periods, and of the counties of which it is constituted Buckingham and Huntingdon enjoyed unusual exemption from fatal disease, though High Wycombe was visited by small-pox and Great Marlow by measles. Scarlatina attacked Peterborough; in Shitlington, Bedfordshire, the deaths were 25, and nearly a third was from small-pox; and at Ampthill, in the same county, hooping-cough was prevalent and fatal. There was typhus in Weston and Carlton, Cambridgeshire; Ely, in this county, was healthy, which the Registrar of Haddenham ascribed to the dryness of the weather, for in the wet corresponding quarter of 1853 he registered 43 deaths, and now he returned only 20. Four deaths occurred from cholera at Ely, one on each of the following days, 3d, 4th, 5th, and 8th of January. Newmarket also makes a very favourable report.

In the EASTERN DIVISION (IV.) 6104 persons died: the return differs little from the returns of the winter quarters. This division consists of Essex, Suffolk, and Norfolk. In the first of these counties the mortality was considerably *higher* than in any of the four corresponding quarters, not excepting the unhealthy winter of last year; in the two others it was reduced *below* that of any of the same quarters. The diseases which placed Essex in this unfavourable position were typhus, measles, hooping-cough, and influenza. Finchingfield had suffered for some months from typhus, which was fatal in 8 cases. The Registrar considers that reduced means of subsistence, in consequence of the high price of provisions, had favoured the progress of the disease amongst the poor. It had prevailed also in the parish of Littlebury (Saffron Walden) and Hedingham. Small-pox attacked Henstead in Norfolk, and continued to prevail in the city of Norwich, in one of the sub-districts of which (East Wymer) 18 deaths, and in another (Conisford) 9 deaths, are referred to it.

The return for the SOUTH WESTERN DIVISION (V.) is favourable, and, as in all the preceding divisions except the first, exhibits an improvement on the winter quarter of last year. The deaths number 9907. The mortality was high at Highworth in Wilts, partly from typhus, which has prevailed. In Devonshire the Registrar of Heavitree (St. Thomas) states that small-pox and hooping-cough were

very prevalent all over the sub-district; and adds, "sanatory arrangements are not carried out." Small-pox was fatal at Newton Abbot, having caused 12 out of the 74 deaths. Cholera destroyed 32 persons in Plymouth in the quarter; 22 of this number occurred in the district of St. Peter, where cholera first appeared in 1849. The ground is marshy, and the marsh has been almost entirely built over, and covered with a dense population, who live in the most filthy and wretched condition. The annual mortality in St. Peter, which is usually excessive, was raised by cholera last quarter to 66 out of a thousand living, whilst in some parts of the same sub-district it was only 23. A case of cholera occurred in Redruth. Typhus, which arose at Martock in Somersetshire from an open ditch behind some cottages, had been raging for several weeks, but was confined to one street. At Yeovil, out of 60 deaths, 44 were of children under two years, who had been carried off by hooping-cough and complaints of the respiratory organs.

The WEST MIDLAND DIVISION (VI.) furnishes the second instance, and in the whole series there are only two in which the deaths in a division, last quarter, outnumber those of the same quarter of last year. In 1853, 14832 were recorded; last quarter they rose to 14993. The three counties of Stafford, Worcester, and Warwick produced this result; the other three, Gloucester, Hereford, and Shropshire, which complete the division, were healthy. In Staffordshire 5330 persons died, or 575 more than in the three winter months of 1853. The ravages of scarlatina in this county were described in the last Report: it continued to exert its power, but with less violence. In Sedgley (Dudley) it was fatal in 149 cases in the autumn quarter; it fell to 23 in the winter quarter. The Registrar of Fenton (Stoke-upon-Trent) again reports the disease, and repeats his complaint of the bad sanatory condition of the place. In Wolverhampton East, scarlatina still existed in its epidemic character, and in the quarter proved fatal in 29 cases. Measles, which was also common throughout Staffordshire, was severe at Bilston, and carried off 71 children there. The weather, which was cold, and subject to sudden changes, raised the mortality in some parts. A case of cholera occurred at Sedgley. Small-pox was increasing at Droitwich. In Birmingham the deaths rose by 400.

In the NORTH MIDLAND DIVISION (VII.) 7227 deaths are recorded,—a number which is rather high. Scarlatina was frequent in the counties of Lincoln, Nottingham, and Derby. The city of Lincoln has lost many lives from it, and in one of its sub-districts more than half of the deaths were from the fever; Grantham and Horncastle continued to suffer. Worksop and Nottingham have been unhealthy: the former had scarlatina, the latter measles. In Bakewell and Chesterfield, in Derbyshire, fever much prevailed.

The mortality has been considerable in the NORTH-WESTERN DIVISION (VIII.), where the deaths number 18506. At Marple in Cheshire scarlatina and typhus were fatal; there were 14 deaths from small-pox in Congleton. In St. Thomas, Liverpool, 3 deaths from cholera occurred in January. Low fever was prevalent at Lower Crumpsall (Manchester), where "the drainage is very bad." Cholera was fatal in one case at Oldham. Measles and scarlatina prevailed there, and the latter disease infested Ulverstone, where the foul state of a stream that intersects the town constitutes a serious grievance. The deaths are fewer in Preston, in consequence of a decrease of the population, caused by the closing of mills; 16 cases of small-pox were fatal there.

The YORK DIVISION (IX.) and the NORTHERN (X.) exhibit an average condition of health. In the former the deaths were 11194, in the latter 5568. Deaths from cholera are reported as follows:—2 in the quarter at Hunslet, 21 in Leeds, with diarrhoea prevailing. Cholera and choleraic diarrhoea have been fatal also at Castleford (Pontefract). Sheffield, Rotherham, Doncaster, York, and Malton have lost children from scarlatina. The mortality rose at Whitehaven from scarlatina, pneumonia, and bronchitis, amongst young and old.

The WELSH DIVISION (XI.) returns 7995. The mortality was high in the district of Abergavenny. Scarlatina visited that quarter; typhus, Bridgend and Denbigh. 7 fatal cases of "sporadic cholera" occurred between the 17th and 25th March at Cardiff.

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. At the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located; the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

On the Meteorology of England and Scotland, during the Quarter ending March 31st, 1854. By JAMES GLAISHER, ESQ., F.R.S., Sec. of the British Meteorological Society.

The weather during the past quarter has been very remarkable in many respects. The cold which set in on November 9th continued with great severity till January 6th, and a heavier fall of snow occurred on January 3d over the greater part of England than has taken place for many years. On December 29th the reading of the barometer began to decrease rapidly, and continued so till January 1, but not in an equal degree at all places. The diminution was much greater in Jersey, Guernsey, the Isle of Wight, Cornwall, and Devonshire than elsewhere. From the 2d to the 3d the readings still decreased at the above places, extending to the extreme south-coast of England, and increased at all places north of the latitude of 51° . From the 3d to the 4th the readings decreased, but to a greater extent at southern than at northern stations. After this time the readings turned to increase in the south, whilst they decreased in the north. It is of rare occurrence for the atmospheric pressure to vary so greatly in its distribution over places so little separated. The reading was very low at all places, and the length of time during which these low readings prevailed was very remarkable.

Respecting the variations of temperature during those days, it is worthy of remark that those stations where the reading of the barometer continuously fell, were subjected to very little variation of temperature, whilst those where it increased and decreased were subjected to great changes and to low temperatures. Although the weather was cold it was not eminently so till beyond some distance from the south coast of England, and the extreme severity of the 3d was not at all felt south of the parallel of Uckfield, with perhaps the exception of Brighton. On the night of the 2d the temperature between the parallels of 51° and 54° decreased to a very low point, but did not do so beyond those parallels either north or south. About London and its vicinity it fell early in the morning of the 3d to 13° , 12° , 11° , and 10° . It had reached these low points at 1 o'clock in the morning, and did not rise above them till after 8 o'clock. It was most severely felt in the Midland counties, where the reading was as low as zero, and it was noted by Mr. Lowe at -4° . This was the lowest reading recorded by any one with trustworthy instruments. At Manchester it was as low as 3° , as noted by Mr. Vernon; but at places situated very near each other the points differed very considerably. It was at about the time of these low temperatures that the heavy fall of snow took place. The wind was from east at most places. A gale was blowing over Jersey and Guernsey; it was very squally and stormy all day at the Isle of Wight, and over Cornwall and Devonshire. At the same time a fog hung over the Midland counties. The air was calm in the north in the morning, and a fresh wind rose in the afternoon. The fall of snow was greatest over those parallels of latitude which had been remarkable for prevalence of fog in November and of frequency of falls of snow in December. In parts of Cornwall there was little or no snow, and but comparatively little on the south coast, west of the Isle of Wight. In London and its vicinity it averaged on the level about 12 inches. On the Norfolk coast it fell to the depth of 18 inches. At Whitehaven scarcely an inch fell, whilst at Liverpool and other places in the same parallels the falls were from 6 to 10 and 14 inches. Towards the north the falls were less heavy; and at Allenheads, situated among the mountainous district of Northumberland, there was none. Heavy falls of snow had occurred previously, and at the time of the great and general fall it lay on the ground to the depth of several feet. The drifts averaged from 3 to 10, 12, and 15 feet, and were deepest at Derby, Grantham, and on the Norfolk coast. At the Isle of Man were drifts to the depth of 10 feet.

On January 1st and 2d the average daily temperature was 10° below their averages, on the 3d it was as much as 14° below, and till the 6th the average daily defect was 7° . On the 7th a period of warm weather set in, and continued till February 9th; the average daily excess of temperature was $4^{\circ} \cdot 8$. From February 10th to the 19th the weather was cold; the average daily defect was $3^{\circ} \cdot 1$; and from February 20th to the end of the quarter the average daily excess of mean temperature was $2^{\circ} \cdot 7$.

The reading of the barometer has been remarkable during a great part of the quarter. On 1st January, at the level of the sea, it was 29.54 in.; it decreased by the 5th, when the lowest reading during the quarter took place, viz. 29.00 in. It continued low for some days; was 30.34 in. on the 21st; decreased to 29.63 in. by the 24th; increased quickly to 30.63 in. by the 26th; decreased to 29.83 in. by the 29th; increased to 30.40 in. by 3d February; decreased to 29.91 in. by the 5th; increased to 30.73 in. by the 14th; decreased to 29.48 in. by the 17th; attained a reading on 4th March higher than any since January 1835, viz. 30.85 in.; decreased to 29.98 in. by the 13th; increased to 30.52 in. by the 17th; decreased to 30.04 in. by the 18th; increased to 30.59 in. by the 22d; decreased to 29.96 in. by the 26th; and increased to 30.47 in. by the end of the quarter.

The mean reading for January was low; it was high in February and March. In a register from 1771 there is no instance of so high a reading in March; the nearest approach was in 1834, and there is no instance of so high a mean reading for the months of February and March in the period from 1771.

The fall of rain was about its average in January, and fell short of the average in February and March. The general deficiency for the quarter is 2 inches. The fall from November to the end of March was about $5\frac{1}{4}$ inches, and is less than the fall in the same five months than any in the present century. The general direction of the wind till 28th January was S.E.; from then till

9th February it was S.W.; from 9th February to the 19th, N.W.; and mostly S.W. from 20th February to the end of the quarter.

The mean temperature of the air at Greenwich for the quarter ending February, constituting the three winter months, was $37^{\circ} \cdot 5$, being $0^{\circ} \cdot 1$ below the average of 80 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred, or thunder was heard and lightning seen, on the 20th January at Falmouth, Truro, and Exeter; on the 21st at Whitehaven; and on the 26th at Nottingham and Wakefield. On the 17th February at Manchester; and on the 18th at Clifton.

Thunder was heard, but lightning was not seen, on the 16th January at North Shields; and on the 20th at Clifton. On the 8th February at Grantham.

Lightning was seen, but thunder was not heard, on the 3d January at Nottingham; on the 6th at Helston and Falmouth; on the 7th at Falmouth and Truro; on the 25th at Whitehaven; and on the 28th at Norwich. On the 7th February at the Isle of Man.

Hail fell on the 1st January at Helston; on the 2d at Guernsey; on the 4th at Dunino and Arbroath; on the 5th at North Shields, Dunino, and Arbroath; on the 6th at Helston, North Shields, Dunino, and Arbroath; on the 7th and 8th at Guernsey; on the 9th at Guernsey, North Shields, Dunino, and Arbroath; on the 10th at Dunino and Arbroath; on the 15th at North Shields; on the 20th at Helston, Rose Hill, Oxford, Linslade, and Hawarden; on the 26th at Grantham and Nottingham; and on the 28th at Stone, Hartwell House, Hartwell Rectory, Linslade, Grantham, and Hawarden. On the 4th February at Warrington; on the 6th at Hawarden; on the 7th at Linslade, Wakefield, Stonyhurst, Isle of Man, and Durham; on the 8th at Guernsey and Bedford; on the 9th at Stone, Hartwell House, Hartwell Rectory, Bedford, Hawarden, Gainsborough, Durham, and North Shields; on the 10th and 11th at Norwich; on the 15th at Guernsey; on the 17th at Guernsey, Exeter, Rose Hill, Bicester, Oxford, Linslade, Bedford, Grantham, Hawarden, Liverpool, Manchester, Wakefield, Stonyhurst, Isle of Man, and Durham; on the 18th at Jersey, Guernsey, Helston, Truro, Torquay, Exeter, and Isle of Man; and on the 19th at North Shields. On the 15th March at Stonyhurst; on the 16th at Hawarden; on the 18th at Linslade, Bedford, Hawarden, and North Shields; on the 19th at Truro, Lewisham, Greenwich, Oxford, Stone, and Hartwell Rectory; on the 26th at Linslade and Stonyhurst; and on the 30th at Hawarden and Dunino.

Snow fell on 26 days in January, 16 in February, and on 3 in March.

Fog was prevalent on 21 days in January, 12 days in February, and 15 days in March.

Aurora were seen on 7 days in January, 12 days in February, and on 15 days in March. The magnets were disturbed on all these days.

Zodiacal Light was seen on the 18th February at Nottingham; on the 23d at Hartwell House; on the 25th at Stone; on the 26th at Stone and Hartwell House; and on the 28th at Hartwell House. On the 1st March at Nottingham.

Solar Halos were seen on 19 days during the quarter.

Lunar Halos were seen on 31 days during the quarter.

The highest readings of the thermometer in air were 67° 0 at Bicester and Hartwell House, 63° 7 at High-street, Exeter, 65° 2 at Lewisham and Paddington, 61° 5 at Manchester, 64° 3 at Nottingham, 64° 2 at Greenwich, 64° 0 at Bedford, and 65° 9 at Royston. The lowest were -45° 0 at Nottingham, -39° 0 at York, and -29° 1 at Grantham. The least daily ranges of temperature took place at Whitehaven, Jersey Guernsey, Liverpool, Worthing, Isle of Man, Torquay, and Ventnor; and the greatest at Nottingham, Bicester, Lewisham, St. John's Wood, Manchester, and Wakfield.

Rain fell on the least number of days at York, Bedford, Lewisham, Hawarden, and Cardington; and on the greatest number at Whitehaven, Truro, Wakefield, Falmouth, and North Shields. The least falls took place at Norwich, Paddington, Greenwich, Stone, Lewisham, Enfield, and York; and the mean amount at these places is 8° inches. The largest falls occurred at Stonyhurst, Whitehaven, Truro, Falmouth, Helston, and North Shields, and their mean is 8° 8 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

| PARALLELS OF LATITUDE, &c. | WIND. | | | | | | | | | | RAIN. | | | | | | | | | |

NOTE.—The first 13 weeks of 1854, constituting the March quarter in the Weekly Tables of Mortality, ended April 1st, in which 16394 deaths were registered. In the quarter ending March 31st (p. 7), 16383 deaths were registered.

* Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the coroner in vague terms, such as "found dead," "natural causes," &c. &c.

1854.]

QUARTERLY RETURN

[No. 2.]

OF

THE MARRIAGES, BIRTHS, AND DEATHS IN ENGLAND.

THIS Return comprises the BIRTHS and DEATHS registered by 2191 Registrars in all the districts of England during the spring quarter ending June 30th, 1854; and the MARRIAGES in 12039 churches or chapels, about 3504 registered places of worship unconnected with the Established Church, and 625 Superintendent Registrars' offices, in the quarter that ended March 31st, 1854.

All the returns present a favourable view of the state of the country. The marriages in the first quarter of the year exceed the average proportion. In the quarter ending June 30th, the number of births that have been registered greatly exceeds the numbers returned in any previous quarter; and the mortality has been below the average. Cholera has not prevailed to any extent, but the mortality of the town districts has slightly exceeded the average, and the diminution in the mortality is found to be chiefly in the country districts.

MARRIAGES.

33144 marriages were celebrated in the quarter ending March 31st, and in proportion to the population, this number exceeds the average of the ten corre-

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1842-54 and in the Quarters of those Years.

* The numbers up to 1851 have appeared in the Annual Reports.

sponding quarters, but it is less by 1870 than the marriages in the winter of 1853. The pressure of the high price of provisions has had some effect in depressing the marriages. On comparing the numbers in the corresponding quarters of 1853 and 1854, the decrease is found to be greatest in London, in Devonshire, in Shropshire, in Lancashire, in the West Riding of Yorkshire, and in Westmorland. In Staffordshire, Warwickshire, Durham, and Northumberland, where the iron and coal districts abound, the marriages exhibit no sensible decrease.

BIRTHS.

172420 births were registered in the quarter ending June 30th, or 13702 births in excess of the births in the spring quarter of 1853. On an average the births were at the *annual rate* of 3.45 per cent. on the population in the ten spring quarters, 1844-53; in the spring quarter of 1854 the rate was 3.72 per cent. The increase is observable in every division of the country.

INCREASE OF POPULATION.

The number of children born last quarter was 172420, and in the same period 102666 men, women, and children died; therefore the registers discover a clear gain to the population of 69754. But the increase or decrease of a people is not dependent entirely on the facts recorded in its registers; immigration and emigration materially modify the result. The number of emigrants who left English ports, where emigration officers are stationed, as furnished by the Commissioners, was 99545. They are not distinguished in this return as regards the parts of the United Kingdom from which they came; but a large proportion were Irish, and many Scotch, who came hither only for embarkation. Of 116861 persons who left the ports of the United Kingdom, the United States was the place of destination for 67668; British North America for 26600; the Australian colonies for 21998;

* The Table may be read thus, without reference to the decimal points:—In the year 1848, to 100000 of the population of England there were 798 marriages, 3249 births, 2307 deaths registered.—The annual rates of marriage in each of the 4 quarters were .661, .808, .755, and .961 per cent.; the rates of death 2.794, 2.313, 2.005, and 2.108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the 2 last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

and 595 set out for other places.* In the preceding three winter months the number who left did not greatly exceed a third part of the above number.

Prices of Provisions.

In the last quarter consumers were not more fortunate as regards the price of the chief articles of food than they were in the preceding three months. Beef by the carcase rose from 5½*d.* to 5¾*d.*; the mean price of mutton remained at 5¾*d.*, that of potatoes rose from 140*s.* to 155*s.* per ton. The average price of wheat slightly declined, having been in the previous three months 79*s.* 6*d.*, in the last three months 78*s.* 4*d.* per quarter, while the quantity sold in the English and Welsh towns that make returns was less in the latter period by 4180 quarters weekly, and the amount of wheat and wheat flour imported for home consumption remained nearly the same. Wheat was 33*s.* 10*d.* per quarter dearer than in the corresponding period of 1853. Beef and mutton in Leadenhall and Newgate, which were then 4½*d.* and 5½*d.*, averaged 5¾*d.* and 5¾*d.*, while potatoes are dearer by more than 20 per cent. The working classes have suffered from the necessity of increased expenditure, which has been aggravated in some parts by slackness of trade, but generally sufficient employment and good wages have enabled them to live in circumstances of comfort.

STATE OF THE PUBLIC HEALTH.

The Spring of 1854 was a season of more health to the people of England than the Spring of 1853. In the quarter to which the present returns refer 102666 deaths were registered; fewer by 5195 than in the same period of the previous year. In large town populations, however, the public health was by no means good during last quarter; the rate of mortality was higher than the average, for 25 died out of every thousand persons, whilst 24 represents the average annual proportion. In the freer country regions and small towns, the spring months were propitious, the average annual rate of mortality for the same season being 22 out of a thousand, and the actual mortality last quarter having been only 20 out of a thousand.

* From a Return with which the Registrar General has been favoured by the Emigration Commissioners.

In the LONDON DIVISION (I.) the deaths rose to 15114, a number which is in excess even of those in the unhealthy spring of 1853. The epidemic class of diseases was very fatal, having destroyed 3686 lives, the numbers in the four corresponding quarters of 1850-3 having been 2032, 2652, 2828, and 2979. Hooping-cough and scarlatina were the principal agents in producing this result; they number respectively 779 and 747. Croup rose from its usual proportion of about 80 to 114. Typhus also exhibits an increase throughout the five spring quarters, in which the deaths run thus: 426, 428, 483, 678, and (last quarter) 697. Small-pox, after subsiding in 1853, has become more fatal within the last six months, but without accelerating its progress during this period; in the March quarter it was fatal to 123 persons, in the next to 122. Measles carried off 476 children, an increase on previous quarters. Diarrhoea has also been more fatal than usual, 315 deaths being referred to it; in the spring quarters of 1850-3, the following were its numbers: 200, 191, 163, 292. Cholera, including the "cholera infantum," &c. is returned in only 11 cases, purpura in 20, rheumatic fever in 23; erysipelas in 115, a considerable increase. Under syphilis 58 deaths are enumerated, also a great increase; and 2 persons died in the quarter from hydrophobia. 102 women died after childbirth. 262 persons died from cancer, 25 from carbuncle. Six quarters have intervened between 1852 and the present

* Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending June 30th, 1852, 1,143,339; for the 13 weeks ending Sept. 30th, 1,023,251; for the 13 weeks ending Dec. 31st, 1,445,906; for the 13 weeks ending March 31st, 1853, 1,236,493; for the 13 weeks ending June 30th, 1853, 1,099,261; for the 13 weeks ending Sept. 30th, 1853, 1,119,128; for the 14 weeks ending Dec. 31st, 1853, 1,106,027; for the 13 weeks ending March 31st, 1854, 780,282; and for the 13 weeks ending June 30th, 1854, 725,946. The total number of quarters entered for Home Consumption was respectively 710,780; 882,850; 947,310; 825,886; 1,074,095; 1,560,255; 1,191,149 (13 weeks); 1,345,743; and 1,343,305.

time, and in these the deaths from carbuncle have been as follows: 20, 15, 17, 18, 25, and 25. Twenty-four persons died last quarter from disease created by indulgence in intoxicating liquors.

In the **SOUTH EASTERN DIVISION (II.)** the health of the people was various. Amongst its five counties Hampshire was rather unfortunate, its deaths rising to 2190, which, though not remarkably in excess, is more than in any of the four corresponding quarters. Southampton, which had been fatally visited by small-pox in the early part of the year, continued to suffer from this distemper, which recently, however, has abated. At Kingston, in the same county, and Landport the disease showed no abatement in the last quarter; while scarlatina and typhus prevailed in the former place, and low fever was common at Newport in the Isle of Wight. Kent and Berkshire enjoyed more than usual exemption from fatal disease. The number of deaths in the second division was 7984; a great reduction on the unhealthy spring of 1853; but the return is not very satisfactory as compared with those of ordinary years.

The **SOUTH MIDLAND DIVISION (III.)**, lost 6236 lives, the number of deaths in the same quarter of the previous year having been 6795. The mortality was low in the county of Hertford and parts of Cambridge; rather high in Northamptonshire and Bedfordshire. Typhus had broken out in the parishes of Westbury and Finnerie in Northampton, and had drawn attention to the necessity of cleansing operations. At Crowland, in the same county, small-pox was prevalent, "owing to the neglect of vaccination." This disease attacked also Luton and various other points in Bedford, and not without much severity. Intermittent fever was very general in the Sutton sub-district of Ely, in Cambridgeshire. Speaking of Whittlesey, the Registrar says:—"For a fen district this may be considered healthy. Some years ago the parishioners filled up all the muddy ditches in the town, repaved all the streets, gravelled all the roads, and made brick drains and cess-pools where most required."

The **EASTERN DIVISION (IV.)** exhibits a satisfactory result, the deaths having declined from about 6000 to 5364. Suffolk and Norfolk experienced a reduced rate of mortality, though small-pox was present at Norwich and other parts of the latter county. Orsett in Essex was decidedly unhealthy, for there scarlatina, bilious fever, ague, and dysentery were all prevalent. Malaria, which infests the district from the undrained Thames Marshes, was unusually virulent.

The spring quarter was favourable to health in **DIVISION (V.)**, the **SOUTH WESTERN**; and the deaths fell from between nine and ten thousand to 8616. The mortality was low in all the five counties which constitute this division; viz. Wilts, Dorset, Devon, Cornwall, and Somerset. But some exceptional localities are mentioned, such as St. Ives and Marazion, where measles and scarlatina were fatal to children, and at Stogumber small-pox was very prevalent, though not fatal. The Registrar of Ilchester (Yeovil) presents an unfavourable account of the condition of labourers in his district: wages low, in some instances only 6s. per week, the average for able-bodied men being 8s. or 9s.; provisions dear, and house accommodation bad, while many of the poor live on horse-beans and barley-meal of an inferior kind. Much discontent had arisen in consequence.

In the **WEST MIDLAND DIVISION (VI.)** a bad state of health continued to prevail, not universally, but in three of its counties. It was remarked in the Report for the winter quarter that the First Division (London) and the Sixth furnished the only two instances in which the deaths in that quarter outnumbered those of the same quarter in 1853, and it is worthy of notice that the same observation is strictly applicable to the present returns. Staffordshire and Warwickshire are the two counties which produce this unfortunate distinction. Staffordshire, in which the deaths rose from 4115 in the spring quarter of 1853 to 4728 in last quarter, still suffered much from scarlatina and measles. One of the Registrars of the Wolverhampton district reports 68 deaths from measles, or nearly a fifth part of the total number registered; whilst another reports 56, or

nearly a third of the whole number. It was fatal also at Walsall and Sedgley in the same county; and a Registrar in West Bromwich mentions that the mortality was much increased by "a very malignant kind of measles." Many children in Birmingham were carried off by the same disease, and typhus and measles were very prevalent and fatal in the parish of Bulkington (Nuneaton). The Registrar of Nuneaton deplors the condition of the parish last-mentioned, which he says is almost constantly unhealthy. He believes that so much sickness arises from the extreme destitution of its poor population in consequence of the depression of the ribbon manufacture, low wages, and dear provisions. Taking the two corresponding quarters, the deaths in the West Midland Division rose from 12681 in 1853 to 12994 in the current year.

The deaths enumerated in the NORTH MIDLAND DIVISION (VII.) are 6899. Lincolnshire suffered an increase of mortality, which was caused by scarlatina prevailing over the county. The Lincoln, Horncastle, Spalding, and Grantham districts were ravaged by the epidemic, which is described as of a very malignant character at Denton. It is reported in various parts of the three counties of Leicester, Nottingham, and Derby.

The NORTH-WESTERN DIVISION (VIII.), which comprehends Cheshire and Lancashire, appears to have enjoyed an average condition of health. Here 16273 deaths were registered, a number less by upwards of a thousand than were returned in the same quarter of last year. In Liverpool the mortality was high, owing to the extensive prevalence of measles. Cholera was present, but chiefly amongst Irish or other visitors. There was much typhus and diarrhoea at Wigan. Out of 236 deaths in the Regent-road sub-district of Salford, 42 were caused by measles. Scarlatina and diarrhoea visited Ashton-under-Lyne, and were fatal principally in streets without pavement or sewers. There were 2 cases of cholera at Dukinfield, but without fatal consequences. The mortality was low in Bolton, Bury, and great part of the Manchester district. The Registrar of Market-street, Manchester, observes, that the inmates of the workhouse had much increased because necessaries had become dearer, while there was less activity in various branches of trade. Great improvement in health was manifested both at Bolton and Bury, a result which in both places is confidently attributed to the progress of sanatory measures. More children than usual were born at Chorley, partly on account of a temporary accession to the population made by Irish labourers, who were already on the spot waiting for harvest.

The deaths in the YORK DIVISION (IX.) were 10905. Leeds suffered severely from measles, and the total deaths in that district were 935, which is about 250 more than usual. The Registrar of the south-east sub-district recorded 16 cases of cholera. Scarlatina prevailed much at Kimberworth (Rotherham), Thorne, Selby, and East Stamford Bridge, and swelled their respective returns. This disease was also rife in the North Riding, and generally throughout this division the mortality appears to have been considerable, and chiefly amongst young persons.

NORTHERN DIVISION (X.): The deaths were 5316, a mortality differing not much from the average rate. There was abundance of employment at the collieries of Easington in the county of Durham, and population and births had consequently increased. The town of Kendal suffered from small-pox.

The Welsh population (DIVISION XI.) lost 6965 lives, rather more than the usual number. Scarlatina prevailed at Blaenavon (Abergavenny). The ironworks in this place were prosperous, and these having attracted population, the births had increased. The same circumstance is observed at Llanelly (Crickhowell). Out of 262 deaths at Cardiff 68 were from measles. Scarlatina prevailed fatally at St. David's, and also at Hope (Wrexham); typhus at Llanrwst but not fatally. The Registrar of Wrexham complains of bad sanitary condition,—want of water and want of drains.

MARRIAGES Registered in the Quarters ending March 31st, 1850-54; BIRTHS and DEATHS Registered in the Quarters ending June 30th, 1850-54

* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of this Registration Counties differ more or less from the boundaries of the Counties proper.

On the Meteorology of England and Scotland, during the Quarter ending June 30th, 1854. By JAMES GLAISHER, ESQ., F.R.S., Sec. of the British Meteorological Society.

The period of warm weather which set in on February, so continued till April 21st; the mean excess of daily temperature within this period was $3\cdot8^{\circ}$. On April 22d a cold period began, and continued till the end of the quarter; the mean daily defect of temperature from April 22d to June 30th was 3° . The marked change in the weather which took place on April 22d, caused very great injury to vegetation generally, and many even hardy plants were killed. The fall of rain in June amounted to one inch only, and the defect on the quarter exceeds two inches.

The mean temperature of the air at Greenwich for the quarter ending May, constituting the three spring months, was $47^{\circ}\cdot7$, being $1^{\circ}\cdot3$ above the average of 80 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred or thunder was heard and lightning seen, the 9th April at Royston; on the 15th at Guernsey; on the 18th at Hartwell House; on the 19th at Liverpool and Isle of Man; on the 21st at Rose Hill, Bicester, Oxford, Stone, Hartwell House, Hartwell Rectory, and Linslade; and on the 27th at Royston and Nottingham. On 1st May at Hartwell Rectory; on the 2d at Rose Hill, Bicester, Oxford, Stone, Hartwell House, Linslade, Cardington, Bedford, Nottingham, Gainsborough, Wakefield, and Dunino; on the 3d at Warrington; on the 4th at Clifton, Hartwell House, Nottingham, Warrington, and North Shields; on the 5th at Exeter, Stone, Hartwell House, Hartwell Rectory, Linslade, Cardington, Bedford, Grantham, Gainsborough, Liverpool, Wakefield, North Shields, and Dunino; on the 7th at Grantham, North Shields, and Dunino; on the 8th at Clifton, St. John's Wood, Rose Hill, Bicester, Cardington, Bedford, and Gainsborough; on the 9th at Midhurst, Lewisham, Greenwich, St. John's Wood, Rose Hill, Oxford, Hartwell House, Cardington, Bedford, Nottingham, Gainsborough, Wakefield, Stonyhurst, and Dunino; on the 23d at Bicester, Nottingham, Liverpool, Wakefield, and North Shields; on the 24th at Truro, Clifton, Bicester, Hartwell House, North Shields, and Dunino; on the 26th at Helston, Truro, Stone, Hartwell House, Hartwell Rectory, Norwich, Nottingham, Wakefield, and Stonyhurst; on the 27th at Rose Hill, Stone, Hartwell House, Hartwell Rectory, and Norwich; on the 28th at Exeter, Clifton, Lewisham, Greenwich, Stone, Hartwell House, Hartwell Rectory, Linslade, Cardington, Bedford, Norwich, Nottingham, and Wakefield; and on the 30th at Midhurst, Paddington, Norwich, Grantham, and Nottingham. On 1st June at Helston, Falmouth, and Truro; on the 13th at Lewisham and Greenwich; on the 17th at Oxford, Stone, Hartwell Rectory, Linslade, and Wakefield; on the 27th at Gainsborough, Warrington, Wakefield, and Stonyhurst; on the 28th at Cardington, Bedford, Warrington, Liverpool, and Stonyhurst; on the 29th at Midhurst, Cardington, and Bedford; and on the 30th at Midhurst, Lewisham, Greenwich, Paddington, St. John's Wood, Rose Hill, Oxford, and Bedford.

Thunder was heard but lightning was not seen on the 15th April at Jersey; on the 18th at Isle of Man; on the 19th at Warrington; on the 21st at Nottingham; on the 22d at Lewisham; and

on the 27th at Cardington, Grantham, Nottingham, and Wakefield. On the 2d May at Grantham, Holkham, Nottingham, and Stonyhurst; on the 3d at Exeter and Stonyhurst; on the 4th at Stonyhurst; on the 5th at Exeter, Rose Hill, Bicester, and Nottingham; on the 6th at Guernsey; on the 7th at Hartwell Rectory and Nottingham; on the 8th at Oxford, Stone, Hartwell Rectory, and Holkham; on the 9th at Clifton, Stone, and Hartwell Rectory; on the 10th at Arbroath; on the 21st at Cardington and Holkham; on the 22d at Clifton and Bedford; on the 23d at Exeter and Cardington; on the 24th at St. John's Wood, Rose Hill, Nottingham, and Liverpool; on the 26th at Truro, Cardington, Holkham, Gainsborough, Warrington, Liverpool, and Manchester; on the 27th at Exeter, St. John's Wood, Bicester, Oxford, Manchester, and North Shields; on the 28th at Exeter, Cardiff, Rose Hill, Oxford, Gainsborough, and Manchester; on the 29th at Stone, Hartwell Rectory, Nottingham, and Gainsborough; on the 30th at Midhurst, Lewisham, Cardington, Nottingham, Warrington, Liverpool, and Wakefield; and on the 31st at Stonyhurst. On the 1st June at Jersey; on the 14th at Truro and Exeter; on the 15th at Bedford; on the 17th at Bicester, Oxford, Cardington, Gainsborough, Manchester, and North Shields; on the 18th at Liverpool; on the 19th at Manchester; on the 26th at North Shields; on the 27th at Nottingham and Warrington; on the 28th at Cardiff, Clifton, Bicester, Stone, Hartwell House, Hartwell Rectory, Royston, Nottingham, and Manchester; on the 29th at Clifton, Bicester, Stone, Hartwell House, Hartwell Rectory, and Linslade; and on the 30th at Lewisham, Greenwich, Oxford, Stone, Hartwell Rectory, Linslade, and Nottingham.

Lightning was seen, but thunder was not heard, on the 14th April at Jersey and Exeter; on the 15th at Jersey, Rose Hill, Hartwell House, Hartwell Rectory, and Cardington; on the 16th at Jersey and Lewisham; on the 18th at Truro, Exeter, Cardiff, Clifton, Rose Hill, Oxford, Hartwell Rectory, Royston, Nottingham, Liverpool, Manchester, Wakefield, and Stonyhurst; on the 19th at Warrington; and on the 21st at Guernsey. On the 22d May at Helston; on the 23d at Rose Hill; and on the 28th at Helston. On the 8th June at Nottingham; on the 28th at Isle of Man; and on the 29th at Royston.

Hail fell on 6 days in April, on 19 days in May, and on 4 days in June, at the different stations during the quarter.

Snow fell on the 4th April at Bicester; on the 11th at Royston; on the 23d at Royston, Cardington, Bedford, Gainsborough, Leeds, Stonyhurst, York, Durham, and North Shields; and on the 24th at Lewisham, Greenwich, Oxford, Stone, Hartwell Rectory, Linslade, Royston, Cardington, and Holkham.

Solar Halos were seen on 13 days in April, on 5 days in May, and on 6 days in June.

Lunar Halos were seen on 10 days in April, on 6 days in May, and on 2 days in June.

Fog was prevalent on the 1st April at Exeter; on the 2d at Clifton, Stone, Hartwell Rectory, and Stonyhurst; on the 4th at Exeter; on the 5th at Linslade; on the 6th at Bicester, Stone, and Hartwell Rectory; on the 7th at Exeter, Clifton, and Grantham; on the 8th at Clifton; on the 11th at Grantham; on the 20th at North Shields and Arbroath. On the 6th May at Bicester; on the 12th at Lewisham; on the 17th at Hartwell House; on the 22d at North Shields, and on the 29th and 30th at Dunino. On the 20th June at Midhurst and Bicester; on the 22d and 23d at Isle of Man; on the 26th at Arbroath; and on the 29th and 30th at Bicester.

Aurora were seen on the 10th April at Clifton and Warrington; on the 11th at Clifton; on the 14th at Lewisham, Greenwich, Hartwell Rectory, Grantham, Nottingham, and North Shields; on the 15th at Nottingham; on the 18th at Grantham and Nottingham; on the 19th at Clifton, Grantham, and Arbroath; on the 20th at Grantham and Arbroath; and on the 24th, 25th, and 27th at Arbroath. On the 2d May at Oxford; on the 15th at Hartwell House and Hartwell Rectory; on the 16th at Rose Hill, Stone, Hartwell House and Hartwell Rectory; on the 17th at Stone, Hartwell House, and Hartwell Rectory; on the 19th at Oxford; and on the 23d at Stone and Hartwell Rectory. On the 10th June at Oxford; and on the 19th at Grantham.

Lilac in flower on the 8th April at Bicester; on the 10th at Helston; on the 11th at Jersey; on the 17th at Warrington; on the 19th at Oxford; on the 20th at Gainsborough; on the 22d at Rose Hill; on the 23d at Linslade; on the 29th at North Shields; and on the 30th at York. On the 5th May at Nottingham; and on the 6th at Wakefield. On the 1st June at Dunino.

Wheat in ear on the 29th May at Worthing. On the 5th June at Jersey and Holkham; on the 6th at Helston and Newport; on the 9th at Gainsborough; on the 11th at Linslade; on the 18th at Isle of Man; on the 20th at North Shields; and on the 22d at Rose Hill and Nottingham.

Wheat in flower on the 14th June at Helston; on the 15th at Jersey; on the 18th at Holkham; on the 24th at Nottingham; on the 25th at Linslade; and on the 26th at Gainsborough.

Cuckoo first heard on the 16th April at Jersey; on the 20th at Stone, Hartwell House, and Hartwell Rectory; on the 21st at Clifton; on the 22d at Grantham and Gainsborough; on the 26th at Bicester; and on the 27th at Wakefield.

Swallows first seen on the 2d April at Hartwell Rectory; on the 3d at Stone; on the 7th at Bicester; on the 13th at Hartwell House and Grantham; on the 14th at Gainsborough; on the 15th at York; on the 16th at Jersey; on the 17th at Dunino; and on the 20th at Clifton. On the 2d May at Wakefield; and on the 12th at North Shields.

| NAMES OF STATIONS. | Mean Pressure of dry Air reduced to the level of the Sea. | Mean Temperature of the Air. | Highest Reading of the Thermometer. | Lowest Reading of the Thermometer. | Mean Daily Range of Temperature. | Mean Monthly Range of Temperature. | Range of Temperature in the Quarter. | Mean Temperature of the Quarter. | Mean Temperature of the Month. | Mean Unimpaired Strength. | WIND. General Direction. | Mean Amount of Cloud. | Number of Days on which it fell. | RAIN. Amount of Rain in which it fell. | Mean Weight of Vapour in a cubic foot of Air, as calculated from the weight required to saturate a cubic foot of Air. | Mean degree of Humidity. | Mean whole Amount of Water in a vertical column of Air. | Mean Weight of a cubic foot of Air. | Height of Column of the Barometer above the level of the Sea. |

The highest readings of the thermometer in air were 84°·5 at Bicester, 89°·5 at Bedford, 89°·4 at Holkham, and 81° at Cardington and Gainsborough. The lowest were 29°·8 at Midhurst, 23° at Linslade, 24° at Stone and Hartwell House, and 23° at Arbroath. The least daily ranges of temperature took place at Guernsey, Ventnor, Jersey, Worthing, Torquay, Liverpool, North Shields, and Durham; and the greatest at Bicester, Midhurst, Nottingham, Linslade, Hartwell House, and Hartwell Rectory. Rain fell on the least number of days at Ryde, Worthing, Liverpool, Durham, Jersey, Norwich, and Gainsborough; and on the greatest number at Royston, Warrington, Wakefield, North Shields, and Cardiff. The least falls took place at Stone, Bicester, Nottingham, Grantham, and Hartwell Rectory; and the mean amount at these places is 3·7 inches; the largest falls occurred at Falmouth, Helston, North Shields, Southampton, and Guernsey; and their mean is 7·9 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

| PARALLELS OF LATITUDE, &c. | Mean Pressure of dry Air reduced to the level of the Sea. | Mean Elastic Force of Vapour. | Mean Temperature of the Air. | Mean of Highest Readings of the Thermometer. | Mean of Lowest Readings of the Thermometer. | Average Daily Range of Temperature. | Average Monthly Range of Temperature. | Average Quarterly Range of Temperature. | Range of Temperature of Evaporation. | Mean Temperature of the Month. | Mean Amount of Cloud. | RAIN. | | Mean Weight of Vapour in a cubic foot of Air. | Mean additional Weight required to saturate a cubic foot of Air. | Mean degree of Humidity. | Mean whole Amount of Water in a vertical column of Atmosphere. | Mean Weight of a cubic foot of Air. | Mean Height of Barometer above the Sea level. | |

The Observations have been reduced to Mean values, and the Hygrometrical results have been deduced — from Glaisher's Tables.

Exner.—All the readings of the barometer have been reduced by 0.1 inch for index error. **Yamrose.**—Rain in April fell on 1 day and 2 nights, in May on 10 days and 11 nights, and in June on 6 days and 8 nights.

Exeter:—All the readings of the barometer have been reduced by 0·1 inch for index error. Ventnor:—Rain in April fell on 1 day and 1 night, in May on 10 days and 11 nights, and in June on 6 days and 6 nights. The mean readings of all the elements are deduced from the observations of 21 days only.

NOTE.—The 18 weeks of 1854, constituting the June quarter in the Weekly Tables of Mortality, ended July 1st, in which 16,114 deaths were registered. In the quarter ending June 30th (p. 20), 16,114 deaths were registered.

Under the head of sudden deaths are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the coroner in vague terms, such as "found dead," "natural causes," &c. &c.

1854.]

QUARTERLY RETURN

[No. 3.]

OF

THE MARRIAGES, BIRTHS, AND DEATHS IN ENGLAND.

THIS Return comprises the BIRTHS and DEATHS registered by 2196 Registrars in all the districts of England during the summer quarter ending September 30th, 1854; and the MARRIAGES in 12066 churches or chapels, about 3539 registered places of worship unconnected with the Established Church, and 627 Superintendent Registrars' offices, in the quarter that ended June 30th, 1854.

The general result of the returns is of a mixed character. The *marriages* in the spring quarter exceeded the average proportion. The *births* were also more than usually numerous in the summer quarter ending September 30th. And in the summer quarter also the mortality was high in consequence of the prevalence of the epidemic of cholera, chiefly in dense, ill-drained towns, supplied with impure waters.

MARRIAGES.

40389 marriages were celebrated in the quarter ending June 30th. The number only exceeds by 54 the marriages in the corresponding quarter of 1853; still after

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1842-54 and in the Quarters of those Years.

* The numbers up to 1851 have appeared in the Annual Reports.

allowing for increase of population the marriages have exceeded the average of the ten previous years. The marriages decreased in some of the South Midland counties, and increased in Essex, Suffolk, Norfolk, Wilts, Cornwall, Staffordshire, Worcestershire, in the North Riding of York, in Durham, and in Northumberland.

BIRTHS.

154735 births were registered in the quarter ending September 30th. This number, which exceeds by 7154 the number of births in the summer quarter of 1853, is the largest number ever registered in the summer quarter; and allowing for increase of population the rate of births, 3·294 per cent. per annum, exceeds the average (3·179). The chief increase of births has been in the counties of Essex, Suffolk, Norfolk, Wilts, Somerset, Stafford, Worcester, Lincoln, Durham, Northumberland, Monmouthshire, and South Wales.

INCREASE OF POPULATION.

As 154735 children were born, and 113939 persons died in the summer quarter, the natural increase of population in the quarter was 40796. The increase is below the average. 91900 emigrants sailed, in the quarter, from the ports of the United Kingdom at which there are Government Emigration Agents; 12504 sailed from the port of London, 6201 from Plymouth, 4134 from Southampton, and 58227 from Liverpool, making 81066 from England; 3538 sailed from Scotland, 7296

* The Table may be read thus, without reference to the decimal points:—In the year 1848, to 100000 of the population of England there were 798 marriages, 3249 births, 2307 deaths registered.—The annual rates of marriage in each of the 4 quarters were ·651, ·806, ·755, and ·961 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; each of the 2 last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

from Ireland.* A large proportion of the emigrants that sail from English ports are from Ireland; others are from Germany.

The Prices of Provisions and the Weather.

The price of some of the chief articles of food was higher, of others lower, than it was in the quarter ending September 30th, 1853. Thus wheat, which sold at

† Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending Sept. 30th, 1852, 1,023,251; for the 13 weeks ending Dec. 31st, 1854, 1,445,906; for the 13 weeks ending March 31st, 1853, 1,236,493; for the 13 weeks ending June 30th, 1853, 1,099,261; for the 13 weeks ending Sept. 30th, 1853, 1,119,128; for the 14 weeks ending Dec. 31st, 1853, 1,106,027; for the 13 weeks ending March 31st, 1854, 780,282; for the 13 weeks ending June 30th, 1854, 725,946; and for the 13 weeks ending September 30th, 1854, 733,059. The total number of quarters entered for Home Consumption was respectively 882,850; 947,310; 825,886; 1,074,095; 1,560,255; 1,191,149; 1,345,743; 1,343,305; and 625,755.

Columns 2, 3, and 4 are compiled from the official returns published in the London Gazette; columns 1, 5, 6, and 7 are derived from the London market returns published in the Economist.

* From a Return with which the Registrar General has been favoured by the Emigration Commissioners.

51s. 10d. in the summer quarter of 1853, was 63s. 10d. in the last summer quarter; in the same quarters beef was 5½d. and 5¾d. a pound; and mutton was 6¼d. and 6d. a pound. Potatoes are fortunately cheaper than they were last year. The meteorological observers state that the hay harvest has been late, and generally a poor crop; that the grain crops are good every where, and well got in; that potatoes are abundant; apples and pears scarce, turnips small. There has been a deficiency of rain, which, during the nine months of the year, amounts only to two thirds of the average; the air has been less in motion and is less humid than usual; it has been of the average temperature. Mr. Glaisher has ably described all the meteorological phenomena observed. (See pp. 42-3.)

STATE OF THE PUBLIC HEALTH.

113939 deaths have been registered during the summer quarter, or 21607 more deaths than were registered in the summer quarter of the preceding year. The mortality in the last quarter was at the rate of 2·425 per cent. annually, or 285 more than the average 2·140. The rate of mortality was raised from 2·553 to 3·121, or nearly one fourth part, in the districts comprizing the chief towns; from 1·848 to 1·927, or nearly one twentieth part, in the small towns and in the country. The fatal epidemic cholera is chargeable with this excess in the rate of mortality. Thus when epidemics prevail, as well as in ordinary times, the towns in their present defective sanitary condition are the chief sufferers. During the summer quarter, in the same population, to every *three* deaths in the country there were *four* deaths in the towns.

In LONDON the deaths in the 13 weeks ending September 30th amounted to 24870, or to 11952 more than the deaths (12918) in the summer quarter of 1853. This excess exceeds slightly the deaths from epidemic cholera (9708), and diarrhoea (2069), which make 11777 in the aggregate. In the summer quarter of 1849 the deaths from cholera were 12847, from diarrhoea 2457, or from both causes 15304; and the deaths from all causes were 27100. Small-pox and

erysipelas prevailed to some extent. Scarlatina was epidemic, and was fatal to 978 persons, typhus or fever to 678, ague to 11. In childbirth 96 mothers died; 38 in metria or childbirth fever, and 58 in other ways. Hydrophobia, which had been fatal in London before to only *four* persons in eight years, was in three months the cause of death in *four* instances. It is not known whether the dryness of the season had any influence in producing this result. Epilepsy was fatal in an unusual number of cases (97). 609 deaths were referred to pneumonia, 538 to bronchitis, 1664 to consumption. The deaths of 18 persons were directly referred to intemperance, 8 to privation, 45 to *delirium tremens*, 13 to poison; burns and scalds were less fatal (23) than usual; 104 persons were drowned, 177 were killed by fractures and contusions of various kinds; 28 by wounds.

In every county of the SOUTH EASTERN DIVISION the deaths exceeded the average: cholera was fatal on the Thames and round the coast. The deaths in Gravesend were 206, of which 81 were caused by cholera, and 43 came from vessels on the river. In nearly all the Kentish Districts the mortality was high, and cholera was in many localities fatal. Sussex and Hampshire, with the exception of Portsea Island and Southampton, scarcely exhibited an increase.

Brentford, Edmonton, and other districts near London in the SOUTH MIDLAND COUNTIES suffered severely from cholera. The sanitary arrangements are generally faulty. Up the valley of the Thames the mortality rose from the same causes; the deaths from all causes in the districts of Oxford and Headington rose from 159 to 283. In Wisbeach at the bottom of the Nene Valley, where malarious disease still prevails, the deaths rose from the average of 187 to 331. Cholera was exceedingly fatal. The Registrar of Terrington St. Clement says:—"The want of water is very severely felt. There is scarcely any in many parts of the sub-district, and most of that is unwholesome."

In the EASTERN COUNTIES, West Ham, Romford, and the marshy districts of Essex on the north bank of the Thames, experienced a high mortality, chiefly from cholera; so did Ipswich, which was the only district of Suffolk that suffered considerably. The mortality was high in Yarmouth on the sea coast of Norfolk, and the deaths in Norwich were 370 and 643 in the quarters ending September 1853 and 1854.

In the SOUTH WESTERN COUNTIES the mortality was near the average. Salisbury, Shaftesbury, Dorchester, Exeter, Plymouth, Liskeard, Bodmin, St. Austell, Redruth, and Penzance experienced some increase of the deaths.

In the WEST MIDLAND DIVISION the mortality was below, or about the average, in the counties of Gloucester, Hereford, and Salop; in Cheadle, Wolverhampton, Walsall, West Bromwich, Dudley, and Stourbridge, or on the Wolverhampton cholera field, as it was called in the Report, the mortality was about one third part higher than usual; but cholera was much less fatal than it was in 1849. The deaths in Birmingham rose from 1087 to 1464, from the prevalence of diarrhoea.

In the NORTH MIDLAND DIVISION the counties of Leicester, Rutland, Nottingham, and Derby exhibited a mortality below the average; in the low districts of Lincolnshire the mortality exceeded the average, so that the deaths in the county rose from 1581 to 2092. At Cleethorpes, about 3 miles from Grimsby, 40 deaths from cholera, 8 from diarrhoea, and 6 from other causes occurred. "Ten deaths," the Registrar says, "from cholera have occurred at Grimsby; 4 of them to persons who fled from Cleethorpes, 3 on board ship, and the other 3 indigenous. The proximate causes at Cleethorpes for this outbreak must be over-crowded population, bad drainage, bad water, and utter neglect of sanitary regulations."

Cheshire, except in Runcorn and Wirrall, experienced less than the average mortality. In Lancashire, the deaths in Liverpool and West Derby, in the three summer quarters of 1852, 1853, 1854, were 3537, 2701, and 4563; and the increase is referable to the epidemic cholera. The deaths from all causes in the summer quarter of 1849, when cholera was epidemic, were 8021 in the two districts. The population of Liverpool and West Derby in 1851 was 411515. The deaths in Manchester and Salford during the last quarter were 2789; the population was 315956 in 1851. Diarrhoea has been the prevailing form of disease in Manchester, and the mortality has not been considerable.

In YORKSHIRE the mortality is not above the average. Sheffield has suffered to a certain extent from the epidemic; the deaths from all causes were 1044.

In the NORTHERN COUNTIES, Stockton, Auckland, Durham, Sunderland, Cocker-mouth, and Whitehaven exhibit a high mortality, referable chiefly to cholera. The deaths in Newcastle were 587; in the summer quarter of 1853, when the cholera epidemic broke out, 2085 of the 89156 inhabitants died.

Monmouth, Newport, Pontypool in Monmouthshire, Cardiff and Merthyr Tydfil in Wales, exhibit an increase in the mortality, and the returns show that cholera has been and is there still prevailing.

The Registrars complain generally of the working of the Vaccination Act as it affects the medical profession, the Registrars themselves, and the public. The following are extracts from their Reports:—

BRIGHTON; *St. Peters*.—Vaccination seems very little cared for or attended to, although notices are delivered by me to every parent, agreeably to the recent Act of Parliament. The Act is imperfect, and is negligently carried out by the parent and some medical practitioners.

HENLEY; *Henley*.—Vaccination is not sufficiently attended to by parents of children born since the passing of the compulsory Vaccination Act; some are negligent, and others are prejudiced against vaccination, and some of the medical practitioners are irregular in giving certificates of successful vaccination.

IPSWICH; *St. Margarets*.—The Act for compulsory vaccination has not at present the desired effect; among the labouring classes it is very unpopular, owing to the mistaken notion that other diseases are produced by vaccination. Some are very violent when served with the notice requiring them to have their children vaccinated.

MITFORD; *East Dereham*.—I am sorry to state that the new Vaccination Act appears to be a total failure in my district, for although I have registered 224 births within the last 13 months, only 81 children appear to have been vaccinated.

WELLS; *Glastonbury*.—The Vaccination Act works very badly, few successful cases being returned in proportion to the number of children registered, say one in five. The lower orders are prejudiced against it in many instances, and the profession careless in their certificates.

BASFORD; *Ilkeston*.—Much greater regard has been paid to vaccination, and consequently small-pox has not appeared anywhere in the sub-district.

BARNLEY; *Barnley*.—Vaccination is now well attended to. I have had occasion to proceed against several defaulters, but the great amount of prejudice existing on the introduction of the compulsory act is fast dying away. I have not registered a case of small-pox for nearly 2 years.

WREXHAM; *Wrexham*.—Respecting the Vaccination Act, the people in general approve of it much. I have given to parents since October 1853, 550 notice papers, and have only received from the public vaccinators and other medical men 115 certificates of successful vaccination. Though the people speak well of the Act, it appears there is a lock in the working of it. Having made inquiry last week among a few to whom I had given the notice papers whether their children had been vaccinated, in several instances I found the children had been successfully vaccinated, and the parents had received from the vaccinator a certificate to that effect. Duplicate certificates for these children I have not received from the vaccinator; and I am of opinion that the Register Vaccination Book will be but of little use to the public if the medical men neglect to send the duplicate to the registrar.

MARRIAGES Registered in the Quarters ending June 30th, 1850-54; BIRTHS and DEATHS Registered in the Quarters ending September 30th, 1850-54, in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND.

* The Registration Offices consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union within the limits of one County, and as the limits of the Registration Districts are, in general, identical with the Poor Law Unions, the limits of the Registration Districts differ more or less from the boundaries of the Counties proper.

On the Meteorology of England and Scotland, during the Quarter ending September 30th, 1854. By JAMES GLAISHER, Esq., F.R.S., Sec. of the British Meteorological Society.

The cold period which set in on April 22d continued till July 19th; the mean daily defect of temperature from July 1st to July 19th exceeded 4° , and from April 22d to July 19th averaged 3.4° . At the beginning of July the weather was bleak and variable, and the temperature was low; on some days the deficiency exceeded 6° or 7° , and on one the defect amounted to 10° . From July 20th to the end of the month the temperature was in excess, on the 25th to the amount of 12° , and for the period it averaged 4° daily. From August 1st to 18th the variations of temperature were considerable and frequent; a few warm days being succeeded by a few cold days, and followed by a few warm days again. On August 19th a generally fine and warm period set in, and continued till the end of the quarter, the mean daily excess of temperature for this period was 2.6° .

The temperature of the air for the quarter differs but little from the average. The range of temperature day by day has been unusually large, particularly in September. The temperature of the dew point has been low throughout the quarter, and therefore there has been less than the usual amount of water mixed with the air, and the atmosphere has consequently been less humid than usual, particularly in August and September.

The mean temperature of the air at Greenwich for the quarter ending August, constituting the three summer months, was $58^{\circ}.0$, being $1^{\circ}.9$ below the average of 80 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

The deficiency of rain which has prevailed from the beginning of the year has continued during the quarter. The fall up to the end of September is only two thirds of the average for the first 9 months of the year.

The wind has been mostly from the south-west, more steadily in the northern than in the southern parts of the country. Everywhere it has been light, and the air has been in less motion than usual.

The electricity of the atmosphere has been for the most part very weak, and almost always positive.

Thunderstorms have been less frequent than usual, and there were none of marked character. Scarcely any hail has fallen. Fogs began to be prevalent at the end of August. There has been a marked absence of cumuli and cirrostratus clouds, and at times the atmosphere has been peculiarly transparent.

The hay harvest was very late, and the crop a poor one generally. In the northern parts of the country hay was standing in the fields when the corn was ready to cart off.

Wheat was in flower about the 2d of July, and was cut in Cornwall and Devonshire about the 9th of August; in latitude 52° about the 10th; in latitude 53° the 13th and 14th; in 54° the 15th; from 54° to 55° , between 16th and 21st; and in the neighbourhood of Dunino, whose latitude is $56^{\circ} 34'$, on the 26th.

The grain crops are good everywhere, and well got in. Apples and pears are scarce. Turnips are small from the drought. Potatoes are abundant. The blight in fruit showed itself in Scotland about the 16th July, and the loss there from disease has been great. In many places no loss has been sustained this year from the potato disease.

Thunderstorms occurred, or thunder heard and lightning seen, on the 5th and 7th July at Hartwell Rectory; on the 8th at Truro, Helston, and Clifton; on the 9th at Lewisham; on the 14th and 16th at Liverpool; on the 24th at Falmouth, Truro, Clifton, and Stone; on the 25th at Teignmouth, Exeter, Oxford, Stone, and Cardington; on the 26th at Jersey, Teignmouth, Newport, Ryde, and Clifton; on the 27th at Guernsey and Exeter; on the 30th at Paddington, St. John's Wood, Cardington, Holkham, Nottingham, and North Shields; on the 31st at Jersey, Cardington, and Nottingham. On the 3d August at Paddington, St. John's Wood, and Bicester; on the 10th at Jersey; on the 15th at Hartwell House, Grantham, Gainsborough, Warrington, Stonyhurst, North Shields, Dunino, and Arbroath; on the 16th at Ryde, Cardington, Grantham, Holkham, Nottingham, York, Dunino, and Arbroath; on the 17th at Ryde, Hartwell House, Cardington, Nottingham, and Wakefield; and on the 22d at Norwich and Grantham. On the 13th September at Royston; on the 21st at Bicester and Norwich; and on the 24th at Grantham.

Hail fell on the 8th July at Helston; on the 25th at Exeter; on the 26th at Teignmouth; and on the 31st at Cardington. On the 15th August at Holkham, Hawarden, and Whitehaven. On the 20th September at Stonyhurst and Dunino; and on the 21st at Holkham.

Thunder was heard but lightning was not seen on the 2d July at Holkham; on the 4th at St. John's Wood; on the 6th at Stonyhurst; on the 7th at Oxford and Stone; on the 8th at Falmouth, Exeter, and Holkham; on the 9th at St. John's Wood and Cardington; on the 10th at Teignmouth and Lewisham; on the 12th at Hawarden; on the 14th at Liverpool; on the 18th at Stonyhurst; on the 22d at Ryde; on the 24th at Teignmouth, Oxford, and Hartwell Rectory; on the 30th at Lewisham, Norwich, Manchester, Wakefield, and York; and on the 31st at Clifton, Lewisham, Paddington, Oxford, Stone, Hartwell Rectory, Norwich, Grantham, Holkham, Nottingham, and Gainsborough. On the 1st August at Nottingham; on the 2d at Lewisham, St. Thomas' Hospital, and Nottingham; on the 3d at Lewisham; on the 10th at Holkham; on the 13th at Norwich and Grantham; on the 14th at Clifton and Holkham; on the 15th at Rose Hill, Norwich, Holkham, Nottingham, Hawarden, and Liverpool; on the 16th at Rose Hill, Oxford, and Wakefield; on the 17th at St. John's Wood; on the 18th at Stonyhurst; on the 19th at Jersey and St. John's Wood; on the 20th at Jersey; on the 22d at Holkham, Nottingham, and Warrington; and on the 23d at Warrington. On the 13th September at Royston; on the 21st at Hartwell House, Hartwell Rectory, Nottingham, and Wakefield; and on the 26th at Oxford.

Lightning was seen but thunder was not heard on the 7th July at Oxford; on the 18th at Nottingham; on the 24th at Jersey, Helston, Exeter, Paddington, Oxford, Cardington, and Nottingham; on the 25th at Jersey, Helston, Falmouth, Truro, Clifton, Lewisham, Paddington, Rose Hill, and Cardington; on the 26th at Helston and Truro; and on the 30th at Rose Hill, Oxford, Nottingham, and Wakefield. On the 1st and 14th August at Grantham; on the 16th at Oxford; on the 17th at Bicester; on the 20th at Cardington; on the 21st at Hawarden; on the 22d at Bicester and Oxford; and on the 28th at St. Thomas' Hospital and Cardington. On the 13th at Helston; on the 16th at Royston; on the 21st at Rose Hill, Oxford, Royston, Cardington, and Nottingham; and on the 26th at Grantham.

Solar Halos were seen on the 2d July at Grantham; on the 8th at Stonyhurst; on the 9th at Nottingham; on the 24th at Dunino; on the 29th at North Shields and Dunino; and on the 30th at Nottingham. On the 8th August at Nottingham; on the 13th at Hartwell Rectory; on the 17th at Grantham and Nottingham; and on the 19th at Grantham. On the 2d and 13th September at Nottingham; on the 14th at Stonyhurst; on the 15th at Hartwell Rectory and Whitehaven; on the 17th at Hartwell Rectory; on the 18th at Nottingham; on the 22d at Stonyhurst; on the 23d at Isle of Man; on the 28th at Whitehaven; and on the 29th and 30th at North Shields.

Lunar Halos were seen on the 1st September at Nottingham, and on the 30th at Hartwell Rectory.

Aurora were seen on the 19th and 20th August at Arbroath. On the 3d September at Stonyhurst; on the 17th at Dunino; on the 18th and 21st at Arbroath; on the 26th at Oxford, Dunino, and Arbroath; and on the 27th at Clifton.

Fog was prevalent on the 2d July at Helston; on the 11th at Jersey; on the 15th at Dunino; on the 16th at St. John's Wood; on the 22d at Helston; on the 23d at Clifton; and on the 26th, 27th, and 28th at Jersey. On the 3d August at Exeter; on the 6th at Bicester and Dunino; on the 8th and 11th at Teignmouth; on the 17th at Jersey; on the 18th at Exeter and Gainsborough; on the 29th at Clifton; and on the 31st at Exeter. On the 3d September at Exeter, Lewisham, Hartwell House, Hartwell Rectory, Cardington, and Holkham; on the 4th at Hartwell House; on the 5th at Bicester; on the 6th at Clifton, Rose Hill, Bicester, and Hartwell House; on the 7th at Clifton, Rose Hill, Bicester, Hartwell House, Hartwell Rectory, and Cardington; on the 8th at Hartwell House; on the 11th at Clifton, Lewisham, Rose Hill, Bicester, and Hartwell Rectory; on the 15th and 16th at Helston and Teignmouth; on the 19th at Teignmouth; on the 26th at Clifton and Bicester; on the 27th at Clifton, Lewisham, and Stonyhurst; on the 28th at Clifton and Stonyhurst; on the 29th at Exeter, Clifton, Lewisham, Rose Hill, Holkham, and Stonyhurst; and on the 30th at Truro, Teignmouth, Exeter, Clifton, Lewisham, Rose Hill, Bicester, Hartwell House, Cardington, and Holkham.

The highest readings of the thermometer in air were 92°·3 at Paddington, 91°·3 at Newport, 89° at Lewisham, 88°·7 at Greenwich, and 88° at Helston, High-street Exeter, and Ryde. The lowest were 28° at York, 34° at Nottingham, 35°·7 at Wakefield, and 34° at Stonyhurst. The least daily ranges of temperature took place at Guernsey, Ventnor, Jersey, Liverpool, Worthing, and North Shields; and the greatest at Newport, Greenwich, Lewisham, Rose Hill, Nottingham, and Wakefield.

Rain fell on the least number of days at Guernsey, Jersey, Worthing, Hawarden, Gainsborough, Dunino, Helston, and Ventnor; and on the greatest number at Royston, North Shields, Wakefield, Nottingham, Warrington, and Stonyhurst. The least falls occurred at Toignmouth, Ventnor, Hartwell Rectory, Jersey, and Stone; and the mean amount for these places is 2·9 inches; the largest falls took place at Stonyhurst, Whitehaven, North Shields, Holkham, and Norwich; and their mean is 9·3 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

| PARALLELS OF LATITUDE, &c. | WIND. | | | | | | | | | | | RAIN. | | HUMIDITY. | | | | |
|--|---|-------------------------------|------------------------------|--|---|-------------------------------------|---------------------------------------|---|----------------------------------|------------------------------------|-----------------------|-------------------------|---------------|---|--|--------------------------|--|-------------------------------------|
| | Mean Pressure of dry Air reduced to the level of the Sea. | Mean Elastic Force of Vapour. | Mean Temperature of the Air. | Mean of Highest Readings of the Thermometer. | Mean of Lowest Readings of the Thermometer. | Average Daily Range of Temperature. | Average Monthly Range of Temperature. | Average Quarterly Range of Temperature. | Mean Temperature of Evaporation. | Mean Temperature of the Dew Point. | Mean Amount of Cloud. | Average Number of Days. | Average fall. | Mean Weight of Vapour in a cubic foot of Air. | Mean additional Weight required to saturate a cubic foot of Air. | Mean degree of Humidity. | Mean whole Amount of Water in a vertical column of Atmosphere. | Mean Weight of a cubic foot of Air. |
| In the Counties of Cornwall and Devonshire | 29.682 | 42.70 | 0.33 | 7.42 | 1.16 | 8.36 | 9.41 | 6.56 | 5.53 | 9.4 | 34 | 3.9 | 4.7 | 1.3 | 0.791 | 5.8 | 528 | 100 |

| Dunino and Arbroath | 29.655 | 37.578 | 0.76 | 0.36 | 5.16 | 3.84 | 0.89 | 5.53 | 5.50 | 2.5 | 30 | 3.9 | 4.8 | 1.1 | 0.797 | 5.2 | 520 | 180 |

In the formation of this Table the results from Jersey and Guernsey have not been combined, on account of the difference between the ranges of temperature of the two places. The results from Ventnor are not combined, on account of the much higher temperature, and less range of temperature than those at the other stations in the Isle of Wight.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30th, 1854.

The Observations have been reduced to Mean values, and the Hygrometrical results have been deduced — from Glaisher's Tables.

| Year 1854. | Months. | NAME OF STATIONS and OBSERVERS. | Mean Pressure of | | Temperature of the Air. | | | | Mean Temperature of | | Wind. | Mean Amount of | | Rain. | | Mean Weight of Vapour in a cubic foot of Air. | Mean additional Weight required to saturate a cubic foot of Air. | Mean Humidity. | Mean Whole Amount of Water in a vertical column of Atmosphere. | Mean Weight of a cubic foot of Air. |

Truro.—The mean reading of the barometer in July and September seems to be wrong; July should be about 29.92 in., and September 30.12 in.; no further use has been made of these readings. Exeter.—All the readings of the barometer have been reduced by 0.1 inch for index error. Ventnor.—Rain in July fell on 6 days and 4 nights, in August on 6 days and 2 nights, in September on 6 days and 2 nights.

NOTE.—In the 13 weeks of 1854, which began July 2d and ended September 30th, and which constitute the September quarter in the Weekly Tables of Mortality, 24,370 deaths were registered. In 92 days, viz. the quarter ending September 30th (p. 7), 24,360 deaths were registered.

* Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the coroner in vague terms, such as "found dead," "natural causes," &c. &c.

1854.]

QUARTERLY RETURN

[No. 4.]

OF

THE MARRIAGES, BIRTHS, AND DEATHS IN ENGLAND.

THIS Return comprises the BIRTHS and DEATHS registered by 2196 Registrars in all the districts of England during the autumn quarter that ended on December 31st, 1854; and the MARRIAGES in 12093 churches or chapels, about 3569 registered places of worship unconnected with the Established Church, and 627 Superintendent Registrars' offices, in the quarter that ended on September 30th, 1854.

The general aspect of the returns is unfavourable. The marriages, though above the average, were proportionally fewer than the numbers in the corresponding seasons of the four previous years. The births are below, the deaths above the average. Cholera, which prevailed epidemically in the summer, when it subsided left the population unhealthy; and while the country suffered, the towns have experienced an unusually high rate of mortality.

MARRIAGES.

38150 marriages were celebrated in the three months that ended on September 30th 1854; or 76300 persons were married; which is at the annual rate of 812

MARRIAGES, BIRTHS, and DEATHS, returned in the Years 1842-54 and in the Quarters of those Years.

* The numbers up to 1851 have appeared in the Annual Reports.

marriages to every 100000 persons in the population. The average of the quarter for the preceding ten years was 804. The marriages declined in every division except the Northern, and in Wales and Monmouthshire: in Lancashire and the West Riding of Yorkshire the decrease was considerable.

BIRTHS.

146459 births were registered in the quarter that ended on December 31st; and the number slightly exceeds the numbers in the corresponding quarter of 1853; but the rate is less than the average in the proportion of 3·111 to 3·143 births per cent. per annum on the population.

The *births* that were registered during the year 1854 amount to 634506, and exceed by 22165 the births during the year 1853. The rate of births was 3·408 per cent.; which exceeds the average by 0·095, but is less than the rate of 1851 and 1852.

INCREASE OF POPULATION.

The births in the quarter exceed the deaths, and leave a balance of 36795 in the population; but, after subtracting 20762* English emigrants, 15988 remain in excess, to which, however, a certain proportion of Irish and Scottish immigrants into England must be added. 52576 emigrants left the ports of the United Kingdom at which there are Government Emigration officers; including 17309 English, 3502 Scotch, 21090 Irish, 1930 foreigners, 8745 not distinguished. Of the number returned as English, 13568 were bound for Australia, 67 for the North American Colonies, 3674 for the United States.†

* The Table may be read thus, without reference to the decimal points:—In the year 1848, to 100000 of the population of England there were 797 marriages, 3247 births, 2306 deaths registered.—The annual rates of marriage in each of the 4 quarters were ·661, ·808, ·755, and ·961 per cent.; the rates of death 2·794, 2·313, 2·005, and 2·108 per cent. In reading the population on the first line add 3 ciphers (000). The 3 months January, February, March, contain 90, in leap year 91 days; the 3 months April, May, June, 91 days; and each of the 2 last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

* This number includes 3453 of the 8745 whose birth-places were not distinguished.

† From a Return with which the Registrar General has been favoured by the Emigration Commissioners.

The Prices of Provisions, and the Weather.

The cost of living affects the births, deaths, and marriages; and how this has varied in the two last years is indicated in the annexed Table. The average price of wheat during the quarter that ended on December 31st 1854 has been 68*s.*, while in the corresponding quarters it was 40*s.* 5*d.* in 1852 and 69*s.* 10*d.* in 1853. The price of wheat in two years rose 68 per cent., beef 44 per cent., mutton 14 per cent. Potatoes are fortunately cheaper than they were in 1852, and only two thirds of the price that ruled at the end of 1853. The weather is ably described by Mr. Glaisher, p. 58.

STATE OF THE PUBLIC HEALTH.

The deaths in the three months October, November, and December amounted to 109664; and the annual rate of mortality in the quarter was 2·330 per cent., which is ·137 above the average. The deaths in the year were 438239; and the annual rate of mortality was 2·354 per cent., or ·088 above the average.

The AVERAGE PRICES of Consols, of Wheat, Meat, and Potatoes; also the AVERAGE QUANTITY of Wheat sold and imported weekly, in each of the Nine Quarters ending December 31st, 1854.

† Note.—The total number of quarters of wheat sold in England and Wales for the 13 weeks ending Dec. 31st, 1852, 1,445,906; for the 13 weeks ending March 31st, 1853, 1,236,493; for the 13 weeks ending June 30th, 1853, 1,099,261; for the 13 weeks ending Sept. 30th, 1853, 1,119,128; for the 14 weeks ending Dec. 31st, 1853, 1,106,027; for the 13 weeks ending March 31st, 1854, 780,282; for the 13 weeks ending June 30th, 1854, 725,946; for the 13 weeks ending September 30th, 1854, 733,059; and for the 13 weeks ending Dec. 31st, 1854, 1,674,173. The total number of quarters entered for Home Consumption was respectively 947,310; 825,886; 1,074,095; 1,560,255; 1,191,149; 1,345,743; 1,343,305; 625,755; and 253,669.

Columns 2, 3, and 4 are compiled from the official returns published in the London Gazette; columns 1, 5, 6, and 7 are derived from the London market returns published in the Economist.

The mortality in the country districts during the year was 1·888 per cent. in 1850, and 2·026 in 1854. The mortality of the town districts, which was 2·288 in 1850, regularly increased, and was 2·816 in 1854. The epidemic cholera was much more fatal in the towns in July, August, and September 1849 than in the same months of 1854; but, upon the other hand, the towns, in October, November, and December 1854, experienced a higher mortality than that of the corresponding months in 1849. Never, therefore, was the demand for real sanatory measures more urgent; as eight millions of the population of the country are living in towns of some magnitude; and the health and vigour of the children and parents must undergo constant deterioration, from the want of pure water, drainage, cleanliness, house accommodation, and a well-considered medical and sanatory organization.

Under the Registration Act the deaths of all classes of the population in England are registered, and the deaths that escape are quite insignificant in number, so that virtually the families of all the people at home have the advantages of registration. A provision also is made for the registration of all deaths at sea, of which information can be formally supplied by the captains and commanders; but the sea returns have not hitherto come in with any degree of regularity. For the year 1854 the returns of the deaths of only 193 persons at sea have been received, including 123 seamen in the Royal Navy, belonging chiefly to the Baltic fleet. No returns of the deaths of seamen in the Black Sea have yet arrived.

The Act has made no provision for the registration of the officers and soldiers of the army who die out of England; so that while the name, age, rank or profession, place, time, and cause of the death of every man, woman, or child that dies at home are preserved in the registers, the names of the men who uphold in arms the cause and the fame of their country abroad find no place in these records. Otherwise every family that has sent forth its sons, and has lost them in the war, would have the satisfaction of knowing that their names were inscribed in a perpetual record, whether they died at Varna, perished in Scutari, sank under the waves of the inhospitable sea, or slumber at Alma, Balaklava, and Inkermann, under the earth of the Crimea, consecrated only by their bravery.

It would be useful in other respects to have authentic official returns of the deaths and the causes of death in the army as well as in the civil population; for it would at the same time dissipate the exaggeration that always attends great losses, and enable the public to see precisely, by the diseases and the mortality, the sanatory condition of the army under different circumstances.

DEATHS in the Autumn Quarters.

| In 117 Districts, comprising the chief towns - - - - - | 6,612,958 | 7,896,473 | 486,898 | 2·548 | 2·777 |
| In 508 Districts, comprising chiefly small towns and country pa- rishes - - - - - | 9,301,190 | 10,041,136 | 481,239 | 1·943 | 2·020 |
| All England - - - - - | 15,914,148 | 17,927,609 | 968,137 | 2·193 | 2·230 |

The army at the census of 1851* consisted of 142870 officers and men, of whom 66424 were stationed in the United Kingdom, 2948 on passage out or home, and 73498 abroad in the colonies and in the East Indies. The annual mortality of men in civil life at home of the corresponding ages is at the rate of 9 in 1000, but the mortality of the troops at home probably exceeds 15 per 1000; and the mortality of the troops abroad, and chiefly in the tropical climates, is such that the mortality of the whole army is said to be at the rate of 30 in 1000 in time of peace. At these rates, 3290 officers and soldiers die abroad annually, of whom about 2193 belong to England, whose names, whatever their connection with property may be, never appear on the English registers. In the time of war the deaths in the army abroad are raised in two ways; by the augmentation of the forces, and the increased rate of mortality from wounds and from the diseases that have hitherto been incidental to warfare in the field. Thus the mean strength of the British force, *officers and men*, in the Peninsula, was 66372; the deaths during the 41 months that ended May 25th, 1814, were 35525, of which only 9948 happened in battle or as the consequences of wounds. 225 per 1000 of the 61511 *men* were, on an average, upon the sick list, and their annual mortality was at the rate of 161 per 1000.*

To the ordinary deaths of officers and soldiers abroad in 1854 must be added the excess of deaths in the war, which have been caused partly by the extension of the same epidemic of cholera that has prevailed in England, and partly by diarrhœa, dysentery, and other diseases that, like cholera, are made fatal by lying on the ground, by the use of impure water, by dirt and damp, by privation, and by the substitution of salt pork, rum, and biscuits, for the fresh meat, vegetables, bread, fruit, ale, stout, or wine that officers and men, like the rest of the people, live on at home.

61000 of the deaths in England during the year 1854 are referable to the imperfect operation of the sanatory organization of our towns.† And the same cause, exaggerated certainly, with the absence of the comforts and necessities that are supplied at home, has led to the deplorable destruction of life in the Crimea.

The deaths in an average year among 54000 men in the town and country population of England at the same ages as the men in the army is 486, or nearly 41 monthly; and about 972 are constantly sick. All the deaths and sickness in excess of these numbers, except the deaths and wounds from battle, are, like the excess of deaths and sickness in our towns, referable to conditions that, in the present state of engineering, chemical, and medical science, may be removed to a considerable extent in ordinary climates, even in the field and in the presence of an enemy; for the art of preserving life has, since the Peninsular campaigns, made as much progress as the manufacture of arms, and if skilfully applied our army will never again endure the mortality from disease that so much impaired its efficiency once in the Peninsula, and again, after the lapse of more than forty years, in the Crimea.

In LONDON the epidemic of cholera subsided, after having been fatal in 13 weeks to 982 persons. Diarrhœa was the cause of 543 deaths. The cholera was fatal to 728 persons and diarrhœa to 565 persons in the corresponding week of 1853, when the epidemic had recently commenced its ravages. Small-pox was fatal in 289 instances, measles in 369, hooping-cough in 419, typhus in 712; but scarlatina has been extraordinarily fatal, and carried off 1297 children chiefly or young people; bronchitis and pneumonia have been very fatal. The deaths by violence are less numerous than is usual, but some are probably entered under erysipelas, which was fatal in 128 cases. One person died of hydrophobia. 5139 persons died of zymotic diseases in the 13 weeks; 17291 of all causes in the quarter that ended on December 31st. The mortality greatly exceeded the average.

*Census, 1851. Part 2. Vol. 1. p. cccxlv. Maculloch's Stat. British Empire. Vol. 2. pp. 554-64.

†The total deaths in England and Wales were 438,239. The deaths, if the mortality of the towns had been the same (2.026 per cent.) as the mortality in the country (where the mortality is also much higher than it should be), would have been 377,180; the difference is 61059.

The EASTERN COUNTIES, the SOUTH MIDLAND COUNTIES, Wales and Monmouthshire, suffered severely; in the counties of the other Divisions, except in Hampshire, Gloucestershire, Staffordshire, Lincolnshire, and Durham, the mortality was not unusually high. Cholera prevailed in some districts during the quarter.

Scarlatina has prevailed, and has been exceedingly fatal in many districts.

Small-pox has also prevailed epidemically, and has attacked some of the militia corps, who should therefore all be vaccinated without delay, as no disease causes more inefficiency in an unvaccinated army.

Many Registrars in their notes call attention to the inefficiency and imperfections of the Vaccination Act.

The following are extracts from their Reports :—

ST. MARTIN-IN-THE-FIELDS; *Charing Cross*.—The Vaccination Extension Act is almost inoperative, very few medical men in my district sending duplicate certificates, and my successful Vaccination Register in more than two fifths consists of blanks.

ST. GILES-IN-THE-FIELDS; *North*.—As regards the Vaccination Act, it is utterly impossible to work it in its present form. I speak from experience, being surgeon to the largest vaccine station (a Government one, the Surrey Vaccine), at which I annually vaccinate 3000 persons. The Government should throw it open to all qualified medical practitioners, and allow them, as was proposed, 1s. for giving certificates to the Registrars. The Registrar's fees ought to be at least double. A pure supply of lymph ought also to be secured to the public, and vaccination should be taught in our various medical schools.

LAMBETH; *Lambeth Church, 2d Part*.—Upwards of 1500 births have been registered in my district since 1st August 1853, but only 228 certificates of successful vaccination have been received.

CAMBRIDGE; *Great St. Andrew*.—Small-pox has been very prevalent and fatal. Vaccination is much neglected, and some surgeons refuse to send certificates, on the ground that they receive no remuneration, and that the Act does not render their service compulsory. Something ought to be done to prevent the spread of this dreadful disease.

ISWICH; *St. Margaret*.—The Act for compulsory vaccination does not appear to produce the desired effect. Many persons are strongly opposed to it, while others are negligent. I have made 485 entries in the register book, but only 111 returns have been received by me from the vaccinators of successful vaccination. If some one were appointed to enforce the penalties the provisions of the Act would be more strictly attended to.

ERPINGHAM; *Cromer*.—There are a great number of children not yet vaccinated. Many of the parents have a great dislike to have the operation performed on their children, and some are determined it shall not be done. It appears that the Act cannot be fully carried out in its present form.

MITFORD; *East Dereham*.—There is still an aversion to the compulsory Vaccination Act; and I think people endeavour to avoid having the births of their children registered, to prevent their receiving the notice requiring vaccination, and this is common in other districts besides mine.

DOCKING; *Docking*.—In part of my district the Vaccination Act is not attended to; in the Union workhouse 11 births have occurred during the past year, yet not a single vaccination has been registered.

ST. THOMAS; *Heavitree*.—Vaccination is not attended to; and the certificates of the cause of death are neglected.

REDRUTH; *Cumborne*.—I feel bound to call attention to the great neglect of the Vaccination Act, which is almost a dead letter. I have delivered 539 notices to the parents of children born, and have only received about 140 certificates of successful vaccination. The only remedy I see for the evil is to throw vaccination (with liberal remuneration) open to the whole medical profession, and thus enlist the support of all its members.

PENKIRIDGE; *Brewood*.—The Vaccination Act is almost a dead letter, as of all the children registered I do not receive certificates of the successful vaccination of more than one in six.

HORNCASTLE; *Horncastle*.—The working of the Vaccination Act is very unsatisfactory. I do not obtain more than one third of the certificates of cases actually registered; private practitioners refuse giving them altogether; and although I have registered 400 births since August 1, 1853, the fees for registering vaccination cases have only amounted to 30s.—about one penny per case of the number registered. Other registrars have the same complaint, and call for some amendment of the Act. The fine of 20s. on parents for noncompliance is never enforced, and a considerable number of children are not vaccinated at all.

LIVERPOOL; *Howard Street*.—Of 288 notices for vaccination given out, I have only received 22 certificates of successful vaccination.

BRADFORD; *Horton*.—With respect to the Vaccination Act, few of the private medical men take the trouble to forward the certificates of successful vaccination, so we have no means of ascertaining whether vaccination is more or less attended to, except in so far as regards those who go to the public vaccinator.

* T. Registration Counties consist of groups of entire Registration Districts, which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which contains more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

On the Meteorology of England and Scotland, during the Quarter ending December 31st, 1854. By JAMES GLAISHER, ESQ., F.R.S., Sec. of the British Meteorological Society.

The warm period which set in on August 19th continued till October 11th; the mean daily excess of temperature from October 1st to October 11th was $2^{\circ}5$; from October 12th to October 28th the temperature was in defect to the amount of $3^{\circ}2$ daily; from October 29th to November 2d it was $5^{\circ}6$ in excess; on October 31st it amounted to $11^{\circ}2$. On November 2d a cold period set in, and continued, with the exception of a few days at the beginning of December, till December 12th; the average daily defect of temperature within this period was $2^{\circ}5$; from December 13th the temperature was for a few days together in great excess, then for a few days in defect, and then in great excess again, and so with rapid alternations till the end of the quarter; the average daily departure from December 13th to the end of the year was $2^{\circ}8$ in excess; the excess on the 14th, 15th, 22d, and 25th exceeded 11° on each day.

The temperature of the air for the quarter differed but little from the average. The range of temperature day by day has been large. The temperature of the dew point was low, except in December.

The rain has been deficient in each month of this quarter. The fall for the year about London amounts to 18.6 inches, being about three fourths of the yearly average. The observer at Jersey remarks that the quarter has been remarkable for excessive rain, violent gusts of wind, and extreme oscillations of the barometer; he also records that on the 26th of October a man was killed in a thunderstorm, and the iron nails of his shoes were all drawn out.

The wind has been mostly from the south-west.

The electricity of the atmosphere has been for the most part positive, at times strong. It has been negative occasionally, chiefly during the fall of rain.

Ozone was small in amount in October, was more abundant in November, and still more so in December, particularly near the sea coast.

The mean temperature of the air at Greenwich for the quarter ending November, constituting the three autumn months, was $49^{\circ}3$, being the same as the average of 83 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunderstorms occurred, or thunder was heard and lightning seen, on the 8th October at Guernsey, Truro, Torquay, and Exeter; on the 9th at Helston; on the 10th at Bicester; on the 23d at Grantham and Worcester; on the 25th at Jersey; and on the 26th at Jersey, Teignmouth, and Liverpool. On the 9th November at North Shields. On the 12th December at Hawarden; on the 27th at Hawarden and Warrington; and on the 31st at Exeter.

Thunder was heard, but lightning was not seen, on the 23d October at Torquay, Greenwich, and Nottingham; on the 26th at Knebworth; and on the 28th and 31st at Nottingham. On the 16th November at Exeter.

Lightning was seen, but thunder was not heard, on 9 days in October, 6 days in November, and on 3 days in December.

Hail fell on 11th October at Hartwell Rectory, Hawarden, Warrington, and Stonyhurst; on the 17th at Falmouth, North Shields, and Arbroath; on the 18th at North Shields and Dunino; on the

19th at Falmouth; on the 20th at Oxford and North Shields; on the 23d at Guernsey, Helston, Truro, Exeter, Clifton, Lewisham, Worcester, Nottingham, Hawarden, Stonyhurst, and Isle of Man; on the 24th at Liverpool, Stonyhurst, and Isle of Man; on the 25th at Jersey, Truro, Clifton, Hawarden, and Liverpool; and on the 26th at Jersey and Liverpool. On the 3d November at Hawarden; on the 8th at Guernsey; on the 9th at Knebworth, Hawarden, and North Shields; on the 14th at Jersey and Guernsey; on the 15th at Guernsey, Helston, and Exeter; on the 19th and 20th at Guernsey; on the 21st at Guernsey, Grantham, Hawarden, Liverpool, and Isle of Man; on the 22d at Jersey, Guernsey, Falmouth, Stone, Hartwell Rectory, and Liverpool; on the 23d at Jersey, North Shields, and Arbroath; on the 24th at Jersey, Guernsey, Oxford, Norwich, Holkham, North Shields, and Arbroath; on the 25th at Guernsey and North Shields; on the 28th at Nottingham; and on the 29th at Teignmouth, Rose Hill, Oxford, Hawarden, Liverpool, and Manchester. On the 1st December at Guernsey and North Shields; on the 4th at Guernsey; on the 5th at Jersey; on the 6th at Jersey, Helston, Falmouth, and Stonyhurst; on the 7th at Hawarden and North Shields; on the 9th at Guernsey, Helston, Falmouth, Truro, Teignmouth, Berkhamstead, Warrington, Isle of Man, and Anstruther; on the 10th at Jersey and Truro; on the 12th at Hawarden and Stonyhurst; on the 15th at Falmouth; on the 16th at Falmouth, Teignmouth, Grantham, Hawarden, and Liverpool; on the 17th at Guernsey; on the 18th at Falmouth, Teignmouth, Holkham, Hawarden, and North Shields; on the 22d at Anstruther; on the 25th at Hawarden; on the 26th at Truro, Manchester, Wakefield, Leeds, and Stonyhurst; on the 27th at Guernsey, Teignmouth, Hawarden, Warrington, Liverpool, and Manchester; and on the 31st at Grantham.

Fog was prevalent on the 1st October at Helston, Truro, Teignmouth, Exeter, Clifton, Lewisham, Greenwich, St. Thomas' Hospital, Paddington, Rose Hill, Bicester, Oxford, Stone, Hartwell House, Hartwell Rectory, Knebworth, Royston, Holkham, and Nottingham; on the 2d at Teignmouth, Exeter, Clifton, Lewisham, Greenwich, St. Thomas' Hospital, Paddington, Rose Hill, Bicester, Oxford, Hartwell House, Hartwell Rectory, Knebworth, Royston, Holkham, and Nottingham; on the 4th at Teignmouth and Stonyhurst; on the 6th at Stonyhurst; on the 9th at Truro; on the 10th at Clifton, Greenwich, St. Thomas' Hospital, Paddington, Rose Hill, Stone, Hartwell House, Hartwell Rectory, and Stonyhurst; on the 12th at Truro, Exeter, Hartwell House, and North Shields; on the 13th at Exeter, Clifton, Lewisham, St. Thomas' Hospital, Paddington, Rose Hill, Hartwell House, Wakefield, and Stonyhurst; on the 14th at Greenwich, Paddington, and Hartwell House; on the 15th at Paddington, Knebworth, and Royston; on the 16th at Bicester and Stonyhurst; on the 17th at Wakefield; on the 19th at Dunino; on the 25th at Paddington, Hartwell Rectory, Knebworth, Gainsborough, Warrington, and North Shields; on the 26th at Stonyhurst; on the 27th at Truro, Clifton, St. Thomas' Hospital, Paddington, Rose Hill, Oxford, Wakefield, and North Shields; on the 29th at Truro; on the 30th at Hartwell Rectory, Knebworth, Royston, and Wakefield; and on the 31st at Truro, Bicester, and Stone. On the 1st November at Clifton, St. Thomas' Hospital, St. John's Wood, Rose Hill, Bicester, Oxford, Knebworth, Norwich, and Wakefield; on the 2d at Helston, Teignmouth, Bexley Heath, Clifton, Berkhamstead, Hartwell House, Knebworth, Royston, Gainsborough, and Stonyhurst; on the 4th at Greenwich; on the 5th at St. John's Wood; on the 6th at Clifton, Greenwich, Bicester, Oxford, Warrington, Manchester, and Stonyhurst; on the 7th at Truro, Clifton, Greenwich, Lewisham, Stone, Hartwell Rectory, Knebworth, Norwich, and Bowdon; on the 8th at Hartwell House, Gainsborough, and North Shields; on the 12th at Teignmouth, Exeter, Bexley Heath, and Stonyhurst; on the 13th at Exeter, Oxford, Knebworth, Leeds, and Stonyhurst; on the 14th at Oxford; on the 15th at Exeter and North Shields; on the 16th at Teignmouth, Exeter, Greenwich, Berkhamstead, Rose Hill, Stone, Hartwell Rectory, Bowdon, and Gainsborough; on the 17th at Torquay, Exeter, Bexley Heath, Clifton, Lewisham, Berkhamstead, Rose Hill, Oxford, Stone, Hartwell Rectory, Knebworth, Royston, Hawarden, Cardington, Liverpool, and Stonyhurst; on the 18th at Exeter; on the 19th at Wakefield; on the 21st at Exeter; on the 22d at Greenwich, Cardington, and Bowdon; on the 23d at Exeter, Clifton, and Greenwich; on the 26th at Exeter, Clifton, Knebworth, and Stonyhurst; on the 27th at Teignmouth, Exeter, Clifton, Lewisham, Greenwich, St. Thomas' Hospital, St. John's Wood, Berkhamstead, Rose Hill, Bicester, Oxford, Wakefield, and Stonyhurst; on the 28th at Exeter and Wakefield; on the 30th at Teignmouth and Exeter. On the 7th December at Truro, Gainsborough, and Stonyhurst; on the 8th at Stonyhurst; on the 11th at Truro, Exeter, and Stonyhurst; on the 12th at Truro, Exeter, and Clifton; on the 13th at Exeter, Paddington, and Rose Hill; on the 18th at Paddington; on the 19th at Warrington and Stonyhurst; on the 20th at Norwich; on the 21st at Exeter, Paddington, and Wakefield; on the 24th at Paddington; and on the 29th at Exeter and Paddington.

Aurora were seen on the 2d October at Oxford; on the 8th at Dunino and Arbroath; on the 24th at Dunino; on the 25th at Stonyhurst, Dunino, and Arbroath; on the 26th at Dunino; and on the 28th at Clifton. On the 9th November at Oxford. On the 5th December at Arbroath; on the 10th at Bowdon; and on the 12th at Arbroath.

Solar Halos were seen on 18 days during the quarter.

Lunar Halos were seen on 33 nights during the quarter.

Snow first fell on the 9th November at York and North Shields; and on 21 other days at different parts of the country north of Latitude 51° , but mostly in small quantities.

Mushrooms were abundant up to November 12th. The young wheat looks very healthy everywhere.

Swallows departed from Clifton, Bristol, October 1st; from Nottingham, October 14th; and from Helston and Guernsey on October 27th.

Forest trees were generally divested of leaves, in the Midland Counties between November 20th and 26th; in Hertfordshire between October 26th and 31st; at Teignmouth in Devonshire on December 2d; and at Helston in Cornwall between November 8th and 15th.

| NAMES OF STATIONS. | WIND. | | | | | | | | | | RAIN. | | | | | | | | | |

The highest readings of the thermometer in air were 75° at Bicester, 73° at Newport, 73° at Helston, Truro, and St. Mary's Hospital, 72° at Greenwich, and 72° at High-street, Exeter; at Bicester, 73° at Newport, 73° at Helston, Truro, and St. Mary's Hospital, 72° at Greenwich, and 72° at High-street, Exeter; at Worcester, 70° at Hartwell Rectory, Knebworth, Derby, and Manchester. The greatest daily ranges took place at Hartwell House, Bicester, Worcester, Nottingham, Lewisham, Ryde, Manchester, and High Street, Exeter; and the least at Jersey, Guernsey, Liverpool, North Shields, Torquay, Hawarden, Ventnor, and Isle of Man.

Rain fell on the greatest number of days at Royston, Manchester, Bowdon, Stonyhurst, Truro, and Warrington; and on the least number at St. Thomas' Hospital, Ryde, Enfield, Dunino, Greenwich, and Cardington. The greatest falls occurred at Jersey, Stonyhurst, Guernsey, Manchester, Falmouth, Truro, and North Shields; and the mean amount for these places is 18.6 inches; the least falls took place at Cardington, Derby, Hartwell Rectory, Rose Hill, Worcester, Gainsborough, Enfield, Stone, and Hartwell House; and their mean is 4.5 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

| PARALLELS OF LATITUDE, &c. | | | | | | | | | | | RAIN. | | | | | | | | | |
|--|---|-------------------------------|------------------------------|--|---|-------------------------------------|---------------------------------------|---|----------------------------------|------------------------------------|-----------------------|-------------------------|---------------|---|--|--------------------------|--|-------------------------------------|---|--|

* Under the head of *sudden deaths* are classed not only deaths described as sudden, of which the cause has not been ascertained or stated; but also all deaths returned by the coroner in vague terms, such as "found dead," "natural causes," &c. &c.

† The Weekly Returns of Births and Deaths in London for 1853 extend over a period of 53 weeks. The last 14 weeks, ending December 31st, constitute the December quarter in the above Table. An additional week was inserted in 1853 for the adjustment of the dates.

‡ In the 13 weeks, or 91 days, that ended December 30th (1854), 17338 deaths were registered in London; in the quarter ended December 31st, consisting of 92 days, the deaths registered were 17391. (See page 55.)

LETTER to the REGISTRAR GENERAL on the CAUSES of DEATH in ENGLAND,
by WILLIAM FARR, Esq., M.D., F.R.S.

SIR,

THE population of England suffered in 1854 from epidemic cholera, which broke out in the previous year (1853); and in 1854 destroyed 20,097 lives. Diarrhœa also prevailed with unusual intensity, and became evidently a part of the cholera epidemic. The other zymotic diseases underwent little variation; and the sporadic diseases exhibited that regularity which usually characterizes their course. In the violent deaths a progressive increase is observable, which deserves attention.

The public health in 1854 was then chiefly disturbed by the cholera epidemic: and in addition to the deaths abroad in war, the violent deaths at home exhibited a large increase.

The mean temperature of the air at Greenwich was $49^{\circ} 0'$; or $0^{\circ} 7'$ above the average of 80 years, but $0^{\circ} 4'$ below the average of the 13 preceding years, as determined by Mr. Glaisher. The winter quarter (January, February, March) was much milder, the spring quarter was colder, than the averages of those seasons; the summer and autumn were warmer than the averages of 80, and colder than the averages of 13, years. The weight of a cubic foot of air was 539 grains, including 3.5 grains of water. A cubic foot of air weighed 537 grains, on an average of 13 years, when it contained a little more watery vapour. The mean height of the barometer was 29.848 inches, which is .082 inch above the average. The rainfall was 18.7 inches, which is 7.3 inches below the average (26 inches) of 39 years, and the deficiency was very equally distributed over the first three quarters of the year. The mean weekly horizontal movement of the air was 687 miles.

It is worthy of remark that the wind at Greenwich moved with much less velocity (100 miles daily) after 1849, than it did in the five previous years (127 miles daily).

The temperature of the preceding year (1853) was low ($47^{\circ} 8'$); and the prices of provisions, which rose rapidly after the harvest of that year,

TABLE (1.).—METEOROLOGY at GREENWICH in the Six Years 1849–54.

| YEARS. | Mean Weekly Movement of the Air in Miles. | Fall of Rain in Inches. | Mean Dryness of Atmosphere. | Mean Temperature of the Air. | Mean Temperature of the Air in the Quarters ending the last day of | | | |
|--------|---|-------------------------------|-----------------------------------|------------------------------------|---|-------|------------|-----------|
| | | | | | March. | June. | September. | December. |
| 1849 | 735 | 23.7 | 6.7 | 49.9 | 41.9 | 51.7 | 61.0 | 44.8 |
| 1850 | 761 | 19.6 | 6.4 | 49.3 | 39.4 | 53.5 | 59.6 | 44.7 |
| 1851 | 684 | 20.5 | 6.6 | 49.2 | 41.9 | 51.5 | 59.8 | 43.7 |
| 1852 | 724 | 34.4 | 7.3 | 50.6 | 41.4 | 51.2 | 61.8 | 48.1 |
| 1853 | 596 | 26.0 | 6.0 | 47.7 | 38.1 | 51.8 | 58.5 | 42.3 |
| 1854 | 687 | 18.7 | 5.7 | 49.0 | 40.8 | 51.7 | 59.8 | 43.7 |

continued high during the whole of the year 1854. The pressure was heaviest in the winter and spring quarters. But labour was in demand, and wages appear to have generally risen.

I. CAUSES OF DEATH.

The causes of 5663 deaths were left unspecified; and of 3993 deaths it is only known that they were sudden, and that inquests were held on the bodies without satisfactorily determining the causes of death. The number of cases in which the cause of death is not specified has gradually diminished from 17,786 in 1838, and 14,343 in 1847, to 5663 in 1854; and the proportional numbers indicate a still greater improvement, as 5·2 per cent. were unspecified in 1838, and 1·3 per cent. in 1854. The general character of the returns has improved in a more rapid ratio; and this is referable partly to the progress of medical science, and partly to the greater interest medical practitioners evince in ascertaining and recording the diseases of which their patients die.

There is reason, however, to believe, that, although the present inquiry into the cause of every death exercises a very salutary effect, it is less useful than it might be made; and the coroner's court is less effective than it might become in deterring evil doers from the commission of dreadful crimes.

I will now briefly pass in review the deaths from different causes under five principal heads.

(1.) Zymotic Diseases:—Zymotici.

113,576 persons died of zymotic diseases; or 26 in every 100 deaths were the results of these causes; which were fatal to 62 in every 10,000 of the population. In the order of their fatality the diseases stand in the following order: deaths in 10,000 living; cholera (11), diarrhœa

TABLE (2).—PRICE OF MEAT, POTATOES, and WHEAT in the Years 1852, 1853, and 1854.

| (Prices in Shillings, Pence, and Vulgar Fractions.) | | | | | | | | | |
|---|---|---------|--|--|---------------------------------|-------|-------|-------|-------|
| YEARS. | Average Prices of | | | Average Price of WHEAT per Quarter in the Market Towns of England. | | | | | |
| | Meat per lb. at Loadenhall and Newgate Markets. | | Potatoes (York Regents) per Ton at Waterside Market Southwark. | Year. | Quarters ending the last day of | | | | |
| | Beef. | Mutton. | | | March. | June. | Sept. | Dec. | |
| 1852 - - | d. | d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. | s. d. |
| 1853 - - | 4½ | 4½ | 90 8 | 40 10 | 40 10 | 40 10 | 41 2 | 40 5 | |
| 1854 - - | 4½ | 4½ | 180 8 | 52 11 | 45 7 | 44 6 | 51 10 | 69 10 | |
| | 5½ | 5½ | 118 9 | 72 5 | 79 6 | 78 4 | 68 10 | 68 0 | |

(Prices in Mills and Florins on the Decimal System.)

| | Mills. | Mills. | Florins. | Florins. | Florins. | Florins. | Florins. | Florins. |
|--------------------------------------|--------|--------|----------|----------|----------|----------|----------|----------|
| 1852 - - | 17 | 20 | 45·83 | 20·42 | 20·42 | 20·42 | 20·68 | 20·21 |
| 1853 - - | 20 | 24 | 65·83 | 26·46 | 22·79 | 22·25 | 25·92 | 34·62 |
| 1854 - - | 23 | 24 | 59·87 | 36·21 | 39·75 | 39·17 | 31·92 | 34·00 |
| Increase per Cent. from 1852 to 1854 | 35 | 20 | 31 | 77 | 95 | 92 | 55 | 68 |

A mil is the thousandth part of £1; its value is 1-25th part of a farthing less than the value of a farthing; for 25 mills or 24 farthings are equal to 6d. 100 mills make a florin; and 10 florins make £1.

Thus beef was at the price of 17 mills the lb. in 1852, and 23 mills in 1854; hence the price rose in the proportion of 17 to 23, or of 100 to 135; that is 35 per cent. By moving the decimal point the price is expressed by the above figures in mills, decs (florins), cents, or, pounds: units, of which the values vary in the same proportions as 1, 10, 100, 1000.

(11), scarlatina (10), typhus (10), whooping-cough (5), measles (5), croup (2), small-pox (15), dysentery (1), erysipelas (1). The other diseases of the class were less fatal. Small-pox and influenza were less prevalent than in previous years; measles was fatal in nearly twice as many cases as in the two previous years. Rheumatic fever and rheumatism were held to be the causes of 1811 deaths. Many cases of heart disease have their origin in attacks of rheumatism.

To syphilis 964 deaths were referred; and this number is above the average of previous years. 16 persons died of hydrophobia.

TABLE (3)—CAUSES OF DEATH registered in ENGLAND in each of the Years 1851, 1852, 1853, and 1854.

| CAUSES OF DEATH. | 1851 | 1852 | 1853 | 1854 | CAUSES OF DEATH. | 1851 | 1852 | 1853 | 1854 |

(2.) *Constitutional Diseases:—Cachectici.*

This class, consisting of the diseases of variable or uncertain seat, and the various forms of tubercular diseases, was the cause of 86,936 deaths; or 20 in every 100 of the total number of deaths.

Under the first order (diathetic diseases) stand 19,791 deaths; namely, 9396 by dropsy, 5826 by cancer, 1330 by hæmorrhage, 1274 by abscess, and 1244 by mortification, and a small residue by ulcer, fistula, gout.

TABLE (4)—ENGLAND. CAUSES OF DEATH. To 1,000,000 PERSONS LIVING, the DEATHS from each Class of Causes, and from each Cause, in the Years 1852, 1853, and 1854.

The Table may be read thus: In 1853 to every 1,000,000 Persons living there were 22,882 deaths from All Causes (nearly 23 in 1000); 174 deaths from small-pox; 270 from measles; 867 from scarlatina, and so on.

In the *tubercular class* phthisis predominates; 51,284 deaths were referred to that disease, which is twice as fatal as any other disease in England. There is no ground for the belief that "consumption" is more fatal in England than it is on the continent; or that it can be at all characterized as peculiarly an English disease; still it is a disease which deserves to be carefully studied in England, with a view both to its prevention and cure. Within the last eight years the disease appears to have declined to

TABLE (5)—ENGLAND. CAUSES OF DEATH. To every 1,000,000 Deaths from All Causes, the proportional Numbers from each Class of Causes, and from each Cause, in the Years 1852, 1853, and 1854.

The Table may be read thus:—To 1,000,000 deaths from All Causes in 1853 there were 7,007 deaths from small-pox; 11,818 from measles; 37,902 from scarlatina, and so on. By placing a decimal point before the three figures on the right hand, the proportion will be shown to 1,000 deaths; thus, there were 7'007 deaths from small-pox to every 1,000 deaths from All Causes.

some extent; for the deaths by phthisis were 53,317 in 1847, and 51,284 in 1854. Some may be inclined to see in this evidence of the efficacy of the modern methods of treatment; but it will be well to wait before coming to a definite conclusion, for more observations. And the increase of deaths by bronchitis from 16,499 to 20,062 in the same period, with the gradual diffusion of diagnostic skill, must also be taken into account.

(3.) Local Diseases:—*Monorganici.*

Inflammations and the other *local affections* of the eight great systems of organs of which the human body is made up were fatal to 152,048 persons during the year. They occasioned 35 in every 100 or rather more than 1 in 3 deaths. Eight in 1000, or 83 in 10,000 of the population, died of monorganic diseases.

The deaths by diseases of the *nervous system* were 52,036; apoplexy and paralysis were nearly equally fatal, and together were the causes of 16,719 deaths; 3752 deaths were referred to cephalitis (inflammation of the brain); 2052 to epilepsy, 24,579 to convulsions, and 3614 to diseases of the brain which were not distinguished, or are not classed in the general list. An unusual number of deaths by tetanus happened (180). The tetanus would occur in almost all cases after injuries; and the 180 deaths may consequently be referred to violence. 551 deaths by delirium tremens must also have been the indirect results of intemperate indulgences in spirits and other intoxicating drinks, as it is in the great majority of cases one of the various forms of alcoholism. The 541 deaths from insanity do not indicate the number of the deaths of persons in a state of insanity; as all maniacs who die of phthisis and other diseases are referred to those heads.

308 deaths were caused by aneurism, 594 by pericarditis, and 12,586 by other diseases of the heart. To the heart as their primary seat many of the 9396 deaths by dropsy might also be properly referred, as cases of idiopathic dropsy are of rare occurrence.

The diseases of the *respiratory organs*, exclusive of consumption, killed 52,484 persons, or very nearly the same number as the diseases of the nervous system; for 28 in 10,000 living died in the year of each of these two classes of diseases. Laryngitis and pleurisy were the causes of 1145 and 955 deaths; asthma of 4271 deaths; but bronchitis and pneumonia are the principal forms of lung disease, and they proved fatal to 43,585 persons in the year. The two forms of disease in children are not always distinguished, and often run into each other, as the inflammation extends from the air-cells to the air-tubes, or from the air-tubes to the air-cells. 20,062 deaths were referred to bronchitis; 23,523 to pneumonia. In 1847 and 1848 an epidemic catarrh (influenza) prevailed extensively, and subsequently to that date the deaths from bronchitis, which ranged from 1663 to 2627 in 1839–1842, have greatly increased; the numbers in the eight years 1847 to 1854 run thus: 16,499, 14,472, 14,826, 14,611, 17,294, 17,073, 22,391, and 20,062.

How many of these deaths are the consequences of influenza, of cold, of the dirty atmosphere of the streets, or of the dust in manufactures, it is not an easy matter to determine; but the whole question deserves the serious study of British pathologists.* Dust is, undoubtedly, the exciting

* See an important paper by M. Desayvre, entitled "*Etudes sur les maladies des ouvriers de la manufacture de Châtelleraut, 1855–6.*" "On voit," says M. Desayvre, "quelle difference et quelle analogie 'la maladie des aigiseurs'" (grinders' rot) "offre avec la *phthisie pulmonaire tuberculeuse*. Ce qui en fait la difference essentielle, c'est l'absence de diathèse; dans la première et la deuxième période nous trouvons une grande dissemblance entre ces deux affections, mais à la troisième les symptômes offrent la plus grande similitude; et pour un médecin non habitué à observer les aigiseurs, il y aurait très facilement matière à confusion." He proposes to call the disease *phthisie pulmonaire calculeuse*, which in English may be expressed by "sand or dust consumption."

cause of many diseases, which are not distinguished in practice from pure bronchitis or phthisis.

To diseases of the *digestive organs* in the aggregate 23,599 deaths were ascribed, that is, about 55 in 1000 deaths from all causes; or 13 persons in 10,000 living in 1854 died of these diseases in that year. The mortality under this head is rather less than it was in the two previous years. 4369 deaths were referred to teething, 755 to gastritis, 3614 to enteritis, 1432 to peritonitis, 748 to ascites. The deaths from hernia were 828; a number larger than had been recorded in the six previous years. By ileus, including constipation, 1224 persons died. 13 deaths were held to be caused by diseases of the pancreas, 71 by diseases of the spleen, and 6756 by diseases of the liver, including 1264 deaths by jaundice.

The diseases of the remaining four systems were comparatively less fatal than those preceding. The constant action of all the parts of which they are composed is not indispensable to the continuance of life.

The diseases of the *urinary organs* were fatal in 4026 cases; which are in 1776 instances registered generally as *disease* of the various parts of the system. Nephria, which is often described as Bright's disease, because it was discovered by the distinguished physician of that name, is now more frequently detected than it was in former years. 400 deaths from nephria were returned in 1849, and 776 in 1854. Diabetes prevails with great constancy from year to year; it is increasing slowly, if we can rely upon the returns of this disease in the earlier years of registration.

Childbirth and the *diseases of the organs of generation* caused 3139 deaths, or, including the deaths by *metria* (puerperal fever), 4093 deaths; that is, .9 in 100 deaths from all causes, 2.2 deaths to 10,000 persons living.

The deaths by rheumatism and rheumatic fever were 1811, and together differ little from the average number. 101 persons died of arthritis or inflammation of the joints, and 1399 persons died of other diseases of the joints.

Skin diseases are not often fatal in England. The deaths of 300 persons were caused by carbuncle and boil, 239 by phlegmon, and 258 by other diseases of the integumentary system.

(4.) *Developmental diseases:—Metamorphici.*

Malformations caused 944 deaths; cyanosis and spina bifida were of most common occurrence.

18,680 deaths were consequent upon premature birth and debility; 14,412 were traced to no cause but atrophy, and 26,466 to old age.

Childbirth and teething properly belong to this class.

(5.) *Violent deaths:—Thanatici.*

15,187 deaths were referred to external causes, 318 to intemperance, 87 to privation of food, 742 to the want of breastmilk, 33 to neglect, and 107 to the action of cold. Indirectly, intemperance and the other agents cause a great number of the deaths which are returned under other heads.

The annual deaths by poison ranged from 444 to 467 in the 4 years 1848-51; while in the three following years the numbers were 370, 409, and 398, and there is reason to believe that the decrease is to a certain extent the effect of legislation. The sale of poisons requires to be placed under rigid restriction, for the safety of the community.

2702 persons died of burns and scalds in the year 1848, and 2755 in 1854; 945 of hanging and suffocation in the year 1848, and 1349 in the year 1854; 2670 of drowning in the year 1848, and 2528 in the year 1854.

The deaths by fractures and contusions have increased rapidly from 4228 in 1848 to 5777 in 1854; and if the deaths under the head "other violence" be added the increase will be from 5254 to 6274.

Of cuts and wounds, 590 and 596 persons died in the two years 1848 and 1854.

To 10,000 persons living, 8·26 died during the year by violent or external causes, or 3·5 in 100 deaths by all causes arose from violence.

Having now brought this brief commentary on the causes of death to a close, I propose to notice, at some greater length, the mortality of women from childbearing, and to describe the epidemic of cholera.

II.—MORTALITY OF WOMEN IN CHILDBEARING.

The word "births" in these reports is used to express the number of children born alive; and as some children are still-born, while others are born two, three, or four in succession, at one childbearing, the "births" do not express exactly the number of childbearings or *accouchements*.

The exact danger of childbirth to the mother is found by dividing the number of mothers who die by the number of childbearings. Now, excluding the still-born, the number of childbearings is obtained by reducing the births in nearly the proportion of 1 to '9902; but taking the still-born into account the proportion of live-born children must be nearly as 100 to every 102·531 mothers bearing children in the year.*

The subjoined Table shows that in the year 1848 *sixty-one mothers* died to every 10,000 children born alive, and that since that year the mortality has progressively declined to *forty-seven* in 10,000. This is a gratifying result, and there can be no doubt that by further care and skill the annual deaths (3009) in childbirth may be largely reduced.

TABLE (6).—DEATHS OF WOMEN IN CHILDBIRTH in the Eight Years 1847-54.

| YEARS. | Number of Deaths from | | | Deaths of Mothers to 10,000 Children born alive. |
|--------------------|------------------------|---------|--------------------------|--|
| | Metris and Childbirth. | Metris. | Accidents of Childbirth. | |
| 1847 - - | 3298 | 784 | 2443 | 60 |
| 1848 - - | 3445 | 1265 | 2080 | 61 |
| 1849 - - | 3330 | 1165 | 2174 | 38 |
| 1850 - - | 3233 | 1113 | 2120 | 35 |
| 1851 - - | 3280 | 1009 | 2281 | 33 |
| 1852 - - | 3347 | 973 | 2375 | 33 |
| 1853 - - | 3090 | 793 | 2298 | 30 |
| 1854 - - | 3009 | 954 | 2055 | 47 |
| 8 Years, 1847-54 - | 23688 | 8154 | 17714 | 34 |

| | | Children born alive. | Estimated Number stillborn. | Born alive or dead. |
|--|---------------------|----------------------|-----------------------------|---------------------|
| 1852 { | Births - - - | 624,012 | 22,122 | 646,134 |
| | Childbearings - - - | 617,902 | 21,906 | 639,808 |
| | | Aggregate. | | Average annually. |
| The total live-born children in 8 years (1847-54) were | | 4,761,278 | - | 595,160 |
| " " 7 years (1848-54) " | | 4,221,313 | - | 603,045 |

* In 1852 the single births were 611,829; the twins were 12,072, representing 6036 childbearings; the triplets were 111, representing 37 childbearings; thus representing 617,902 childbearings in the aggregate. Consequently, to 100 births there were 99 childbearings, or at 100 childbearings 101 children were born. This is exclusive of the *still-born*. In France the births were 1,925,624, or, including the *still-born* and those dying before the registration of birth ("morts nés et morts avant la déclaration de naissance, c'est à dire, dans les trois jours de la naissance"), 1,993,891. To every 100 live-born there are 3·545 *still-born* or dying before registration; for the above numbers are in the ratio of 1 to 1·03545. But $9902 \times 1 \cdot 03545 = 1 \cdot 02531$; and if we apply these ratios to the above facts it will follow that every 100 children born alive imply that 102·531 mothers have been delivered of one or more *live-born* or *still-born* children. But a further correction is required for the children born alive who die before registration: the still-born will probably not exceed 3 to 100 live-born.

On an average of 8 years to every 10,000 children born alive 54 mothers died; so about 53 in every 10,000, or nearly 1 in 189, accouchements were fatal.

What is the mortality in England of *women at different ages* by childbirth? This is shown in the subjoined Table, from the observations of seven years, 1848-54.

What is the danger of death by childbirth among women of different ages *who bear children during the year*? This is a different question; which is of practical importance, both in medical science and in the business of life insurance. The defect in the English schedule, which as yet contains no column for the ages of the parents of the children registered, renders it impossible to answer this question with precision. It will, however, be useful to obtain an approximate answer; and this we have been able to give, by determining the probable proportion of women who bear children at each age from the Swedish returns; and by applying the fraction expressive of this proportion to the English women living in 1851 at the corresponding age, the probable number of them who become mothers every year is determined. The total number thus determined for the year 1851 is 609,845; while the actual average number of the births in the seven years by the returns was 603,045. It is thus evident that the estimate differs to no great extent from the facts; and it may be assumed that the births, corrected for twins, triplets, and still-born children, in England, would represent nearly 609,845 child-bearings.

It will be observed that in seven years 3,232 mothers died annually of childbirth; 1,052 by metria, and 2,180, or twice that number, by other causes. Nearly the whole of the deaths occur among women of the ages 15-45; a few also die of childbirth at more advanced ages.

On comparing the numbers in columns 12 and 15, it will be seen that among women of the age 15-25 the annual rate of mortality per cent. by all causes is .861, of which the 1-21st part (or .041) is by childbirth; at the age 25-35, and 35-45, the annual rates of mortality per cent. by all

| 15-55 | 5,018,778 | 609,845 | 22628 | 7363 | 15265 | 3232 | 1062 | 2180 | *530 | *172 | *858 | *064 | *021 | *043 | 1*135 |
| No. of cols. | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |

By disregarding the decimal points, the Table will show the proportion of deaths to every 100,000; thus,—to every 100,000 Childbearings at the age 15-25, 668 women died by metria and other accidents in childbirth; 277 by metria alone; and 391 by other accidents of childbirth; to every 100,000 Women living at the same age, 15-25, the proportional number of deaths were 41; namely, 17 from metria, and 24 from other causes. The mortality from Childbirth and from all other Causes at that age to every 100,000 females living, was 861.

* The mortality from all causes in the 7 years 1848-54 is increased in consequence of the two cholera epidemic years 1849 and 1854 being included in this average.

causes were 1·090 and 1·296; of which ·098 and again ·098 were wrought by childbirth. Thus at the age 25-35 *one* in 11 deaths from all causes is by childbirth; at the age 35-45 *one* in 13 deaths by all causes is by childbirth. At the age 45-55, when child-bearing is rare, the general rate of mortality is 1·622, and the proportion by childbirth is ·009, or one in 180 deaths from all causes.

These numbers are affected not only by the changing rates of mortality in childbirth and in other diseases, but by the various numbers of women at different ages bearing children; thus at the age of 15-25 only one woman in 16 bears a child in the year, and at 45 and upwards the proportion is inconsiderable; while at the age 25-35 *one* in every 4 women bears in the year, and at 35-45 the proportion by the Swedish returns is about *one* in 6. (*See Table, page 108.*)

It will be seen by column 9 that the mortality among 100 women in childbirth at the four periods of age is ·668; ·425; ·633; and ·883. Thus the danger of dying in childbirth is greater (·668) at the age 15-25 than it is (·425) at 25-35. It is in this early age that a large number of the *first children* are borne by their mothers; and these first births are for various reasons attended with peculiar hazards. The pregnancy of young women, consequently, in the present state of midwifery, involves the risk of dying expressed by ·668 in 100 cases, while the risk of dying in a year from all other causes at the same age (15-25) is ·820 = ·861 - ·041. Now if the woman remain as amenable to other diseases as other women, the mortality rate in her case becomes ·820 + ·668 = 1·488; or is increased in the ratio of 5 to 9.

In the same way it may be inferred, on the same hypothesis, that the rate of mortality from *childbirth* and *all other causes* within the year is 1·417 at the age 25-35; 1·831 at the age 35-45; and 2·496 at the age 45-55.

The mortality in child-bearing is least (·425) at the age 25-35, when more than half of the annual children are borne by their mothers; it rises to ·633 at the decennial period (35-45), and to ·883 at the last period of all. The rates of mortality at the three periods are in nearly the same ascending ratio as 2, 3, and 4; that is, the ·633 is nearly a half more than ·425, and ·883 is a third more than ·633. The rates of mortality at intermediate years can be interpolated; for the calamitous death of mothers in childbirth is governed by a mathematical law.

It may be probably assumed that the child-bearing women of a population are, in the language of the Insurance Offices, "select lives," at least "select" in a certain sense; but it can only be determined by further researches whether they are less or more liable than other women to be attacked or to die by the diseases not incidental to childbirth. It is only well known that when they are attacked by zymotic diseases, such as cholera and small-pox, they succumb in unusually high proportions.

By taking all these considerations into account, the actuary will now be able to calculate from the foregoing Table the premiums that cover the risk of childbirth at different ages; and the physician will, from the same facts, see how much his art has to accomplish before the 3,000 English mothers who perish annually in giving birth to their offspring can be saved. Natural and adventitious difficulties are in the way, but they may in many cases be overcome; for "in sorrow" and not in death "thou shalt bring forth children," is the law of nature.

The death of young women in child-bearing points to some of the dangers to be guarded against; and many of the remaining dangers would be removed by a class of educated nurses.

III.—The CHOLERA EPIDEMIC of 1853-54.

The cholera epidemic of 1853-54 presents many interesting facts; and enables us to determine definitively the influence of certain causes on its fatality.

To the Report of the Committee of the Board of Health for Scientific Investigations, and to the reports of Dr. R. D. Thomson, Mr. Glaisher, and Dr. Hassel, I refer for a complete investigation of the course of the epidemic in London,—of the circumstances by which it was accompanied, and of the states of the air, earth, and water, so far as they can be determined by the chemistry, the microscopy, and the meteorology of the present day. I beg also to refer to the observations in your Weekly and Quarterly Reports for 1853-54, for the results of some observations and investigations which were made at the time; to the report which was submitted to you by me on the epidemic of 1848-49; and to Dr. Baly's able Report which was published by the London College of Physicians.

(1.) *Rise and Progress of the Epidemic.*

The epidemic which in the year 1849 destroyed 53,273 lives by cholera, subsided, and in the year 1850 the deaths by that disease were 887; in the next two years the deaths by cholera rose to 1132 and to 1381; until in 1853 it appeared again in the epidemic form, attacking London and some other places slightly, and ravaging Newcastle-upon-Tyne. The disease remained torpid for a season, and then it broke out, as in former times, in a second eruption, which was in the course of the year 1854 fatal to 20,097 persons of all ages.

But it is impossible to overlook the diarrhœa which has gone on gradually increasing in fatality since the year 1838, when 2482 deaths were referred to that cause; while in 1847 the deaths by diarrhœa were 11,595, in 1848 nearly the same number; in 1849 the deaths by diarrhœa were 17,831; thus making the deaths by cholera and diarrhœa in the epidemic year 71,104, or 72,180 if we add the cases of persons attacked while labouring under other fatal diseases.

Diarrhœa did not discontinue its ravages after 1849; the deaths in the three following years were 11,468, 14,728, and 17,617; in 1853 when cholera appeared in the epidemic form, the deaths from diarrhœa fell to 14,192; but in 1854 their number was 20,052. Thus the deaths by cholera and diarrhœa in this year were 40,149, exclusive of a certain number of deaths which epidemic diarrhœa caused in conjunction with other diseases.*

Diarrhœa is often a symptom of other well-marked diseases†; and it is also the effect of a class of medicines; but this diarrhœa which always prevails in hot weather, and has been so common since the year 1846, is evidently a variety of cholera, proving fatal chiefly to young children and to old people, who do not so commonly exhibit the spasms of cholera, but have nearly all the other symptoms.

Cholera itself has probably always existed in England; and it was well described by Sydenham in the seventeenth century; but the epidemic form presents some differences‡ in the symptoms, as well as in the extent of its ravages. The chief characteristic is found in the duration of the fatal cases; half of which terminate within one day (24 hours) of the first appearance of decisive symptoms, while half of the cases of common cholera terminate in *three days*, and half the cases of diarrhœa extend over *six days*.

If the deaths from cholera and diarrhœa in the two years 1848-49, and in the two years 1853-54 be added together, they will amount to 84,079 and 58,760 respectively; which after subtracting 4000 from each number

* The deaths by cholera and by diarrhœa in 1849, as returned in the Cholera Report, were 53,293 and 18,887; but as a certain number of these persons had also other fatal diseases at the time of death, the general abstracts refer only 53,273 deaths to cholera, and 17,831 to diarrhœa: 20 and 1056 deaths having been referred to the other heads. The epidemic was one of the causes of death; it killed sick and dying men.

† See Report to Registrar General on Cholera 1848-49, p. xi.

‡ See Report to Registrar General on Cholera, p. xvi.

for the ordinary deaths from diarrhoea and cholera, will leave about 80,000 and 55,000, or 135,000 deaths by the two epidemics which occurred in the brief period of *seven years*. This was in England and Wales; and it is probable that the epidemic attacked in the two forms little less than *five millions*, and killed a *quarter of a million of the people of the United Kingdom*. †

(2.) Comparison of the two Epidemics.

The great bulk of the deaths from cholera occurred in 1849 and in 1854; it is therefore proposed to make the deaths in these years the basis of the calculations which follow; and it will only be necessary to bear in mind that the mortality from cholera in the epidemic of 1848-49 is slightly understated, while the relative mortality of 1853-54 is obtained

* In calculating the results given in this and the following Tables, corrections have been made for increase of Population.

† The Mortality from Cholera to 10,000 persons living in 1853 in the Counties of Durham and Northumberland was 17 and 54 respectively.

‡ The deaths returned to the Board of Health in Scotland from cholera alone were 6848 in the year ending 31st August 1853 to 17th November 1854.

The deaths by cholera in Ireland during the year 1849 were 30,156.

Hence it may be inferred that the deaths by cholera in Scotland and Ireland together exceeded the deaths by the epidemic in England.

by adding, as is done in the notes to the Tables, the deaths in Newcastle-upon-Tyne and in Gateshead. As a set-off against the above restrictions in the numbers, may be placed the deaths from cholera and diarrhoea counted in 1849 and 1854, of the *ordinary form*, and which would have occurred if the years had not been epidemical.

The mortality from cholera and diarrhoea in 1849 was at the rate of 41 in 10,000, while the mortality in 1854 was at the rate of 22 in 10,000 of the population. If the 22 is made 23, on account of the earlier attack on Newcastle-upon-Tyne in 1853, still the rate of mortality, taking the increase of population into account, will be in the last epidemic little more than half (23) the rate (41) in the former epidemic.

The rates of mortality by *diarrhoea* in the two epidemics were equal; 11 and 11 in 10,000 of the population.

And in 1854 the rate of mortality by cholera was also 11; that is equal to the mortality (11) by diarrhoea; while in 1849 the rate of mortality by cholera, that is by the severe form of the epidemic, was 30 in 10,000, or nearly three times as high as the rate of mortality by diarrhoea, and three times as high as the rate of mortality by cholera in 1854.

The epidemic of 1853-54, which broke out with so much violence at Newcastle-upon-Tyne, was of the same character as the previous epidemics; and its intensity apparently depended chiefly on the local and meteorological circumstances.

It will be seen in the Table (8.) that the rates of mortality by diarrhoea were nearly equal in the two epidemics, and that the great differences arise under the head of cholera, in the several divisions and the counties: London and the Eastern counties being the chief exceptions.

The zymotic matter of cholera—or *cholerine* as it may be called, is evidently generated or distributed at different degrees of strength; and there is a point of strength at which it strikes down all resistance, and overwhelms a population with destruction. The causes of this destructive form of the disease fluctuate much more than the causes of the diarrhoea. I shall therefore direct especial attention to the development of cholera.

(3.) Influence of Locality.

In the first report on cholera, it was shown that the great ravages of the epidemic of 1848-49, occurred within nine well defined regions, which

TABLE (9).—AREA, POPULATION, and MORTALITY from CHOLERA in 136 Districts of England, comprising the 9 CHOLERA FIELDS of 1849.

| | Area in Square Miles. | POPULATION enumerated. | | Deaths from Cholera. | | Persons to One Square Mile. | | Deaths from Cholera to 10,000 Persons living. | |

Names of the 136 Districts:—All the London Districts (36) and Edmonton, Hitchin, Brentford, Dartford, West Ham, Romford, Rochford, Gravesend, Medway, Thanet, Brighton, Headington, Oxford, Wycombe, Yarmouth, North Wicheford, Whitbeey, Wisbeach, Portsea, Alverstoke, Southampton, Isle of Wight, Salisbury, Totnes, Plympton St. Mary, Plymouth, East Stonehouse, Stoke Damerel, Tavistock, St. German's, Liskeard, St. Austell, Truro, Falmouth, Redruth, Great Broughton, Wirral, Liverpool, West Derby, Prescot, Wigan, Bolton, Chorlton, Barton-upon-Irwell, Salford, Manchester, Bradford, Hunslet, Leeds, Dewsbury, Wakefield, Pontefract, Hemsworth, Wortley, Barnsley, Sheffield, Selby, York, Sculcoates, Hull, Stockton, Teesside, Durham, Chester-le-Street, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tyne-mouth, Alnwick, Carlisle, Cockermouth, Whitehaven, Bridgewater, Bedminster, Bristol, Clifton, Gloucester, Shrewsbury, Newcastle-under-Lyme, Wolverhampton, Stoke-upon-Trent, Nantwich, Wolverhampton, Walsall, West Bromwich, Dudley, Stourbridge, Bridgnorth, Coventry, Newport, Pontypool, Abergavenny, Crickhowell, Cardiff, Merthyr Tydfil, Bridgend, Neath, Swansea, Carmarthen.

* If the Deaths of 1853 in the Districts of Newcastle-upon-Tyne and Gateshead are included the number will be 18,222, or 23 to 10,000 living.

were designated *cholera fields*; and named from the towns which were the great centres of the attack. These cholera fields will be sufficiently indicated here by the names of their chief towns: London, Portsmouth, Plymouth, Bristol, Merthyr Tydfil, Wolverhampton, Liverpool, Hull, Tyne-mouth. Only the cholera fields of London and of Tyne-mouth (including Newcastle-upon-Tyne and Gateshead), were revisited with great severity in 1853-54. The districts of Oxford, Brackley, Towcester, Potterspury, Norwich, Milton, Thanet (containing Margate and Ramsgate), and the marshy parts of Essex and of Cambridge—all within the cholera field round London—suffered in many instances more heavily in the epidemic of 1853-54 than in the epidemic of 1848-49. The mortality in Newcastle and Gateshead by cholera was higher than it had been in either of the epidemics 1831-32 or 1848-49. Liverpool suffered to some extent in 1853-54.

In 1849 the deaths of 46,592 persons by cholera occurred in 136 districts, on an area of 8303 square miles, having in 1851 a population of 7,448,615; while 6701 died in the rest of the country on an area of 50,017 square miles inhabited by 10,478,994 people. The chief mortality in like manner in 1853-54 took place within the same regions: 16,295 died there of cholera, while 3802 died in the rest of England and Wales. Thus the mortality by cholera was at the rate of 65 in 10,000 in the year 1849, and 21 in the year 1854, in the districts of the cholera fields; in the other districts the rates in the two years were 6 and 4.

As a general rule the mortality by cholera in the same large portions of the country was low in the two epidemics; in the last epidemic it fell to two thirds (4) of the rate (6) of 1849 within these regions, whereas it fell to one third (21) of the former rate (65) in the district of the cholera fields.

In twelve districts of the country, containing a population of 121,361*,

The Table may be read thus:—In 1849—Table (a)—there were 12 districts in England in which no death from cholera or diarrhoea occurred; in these 12 districts in 1854 there were 3 deaths from cholera and 14 from diarrhoea, or to 10,000 persons living the mortality was from cholera .2, from diarrhoea 1. In 1854—Table (b)—there were 145 districts in which there was no death from cholera and 1127 deaths from diarrhoea (4 to 10,000 living); in these 145 districts in 1849 there were 1686 deaths from cholera and 1186 deaths from diarrhoea, or to 10,000 persons living the numbers were 7 and 6 respectively.

† For the names of Districts see Tables (11a) and (11b) pp. 79-81.

* The population is cited for 1851, unless it is otherwise stated in the text.

no death from cholera or diarrhœa occurred in 1849: in 1854 only 3 deaths from cholera (2 to 10,000), 14 from diarrhœa, took place in those districts.

TABLE (11a)—12 DISTRICTS in which there were NO DEATHS from CHOLERA or DIARRHŒA in 1849; 73 DISTRICTS in which there WERE DEATHS FROM DIARRHŒA, and NO DEATHS from CHOLERA, in 1849; Number of Deaths from Cholera and Diarrhœa in the same Districts in 1854; Population 1841 and 1851.

| 145 Districts in which there were Deaths from Diarrhœa, and no Death from Cholera, in 1854 - - - - | | | 2382971 | 2473859 | 1636 | - | 1136 | 1127 |

In the year 1854 *one hundred and forty-five* districts had 1127 deaths from diarrhœa, but *no death from cholera*: they had nearly the same number of deaths from diarrhœa (1136) in 1849, but in that year they had also 1636 deaths from cholera. Among these districts Bridgwater, Bridgenorth, Newcastle-under-Lyne, and Alnwick suffered severely from the epidemic of 1849.

The 159 districts which experienced no death from cholera in 1854, held 2,638,660 inhabitants, or rather more than a seventh part of the population of England and Wales; the mortality was at the rate of 6 in 10,000 by cholera and 4 by diarrhœa in 1849; and of *zero* by cholera, 4 by diarrhœa, in 1854. Diarrhœa is here also the constant, cholera the variable, quantity.

Hence it is evident that, as in 1849, the cause of the diarrhœa in 1854 was almost universally diffused over England; for it attacks great numbers and is only fatal to a few, and yet it or cholera caused a death in every district except fourteen. But the cause of the intense form of cholera is local, and circumscribed in its action.

208 of the districts of England and Wales lie along the coasts or tidal rivers; out of their population 15,671 died of cholera in 1854, or 20 in

TABLE (12).—Of the MORTALITY from CHOLERA in the INLAND and the COAST DISTRICTS in 1849 and 1854.

| | POPULATION enumerated. | | Deaths from Cholera. | | Deaths from Cholera to 10,000 Persons living. | |

Names of ONE HUNDRED Districts on the EAST COAST:—Berwick, Belford, Alnwick, Morpeth, Tynemouth, Newcastle-on-Tyne, South Shields, Gateshead, Sunderland, Easington, Stockton, Guisborough, Whitby, Scarborough, Bridlington, Skirlaugh, Patrington, Hull, Sculcoates, Howden, Selby, York, Goole, Glandford Briggs, Caistor, Gainsborough, Louth, Spilsby, Boston, Holbeach, Wisbeach, King's Lynn, Freebridge Lynn, Docking, Walsingham, Erpingham, Tunstead, Flegg, Yarmouth, Blodfeld, Norwich, Mutford, Blything, Plumegate, Woodbridge, Ipswich, Safford, Tendring, Lexden, Maldon, Rochford, Billericay, Orsett, Romford, West Ham. THIRTY-SIX London Districts, Dartford, Gravesend, North Aylesford, Hoo, Medway, Milton, Sheppey, Faversham, Blean.

Names of FORTY-SEVEN Districts on the SOUTH COAST:—Thanet, Eassey, Dover, Elham, Romney Marsh, Rye, Hastings, Battle, Eastbourne, Lewes, Brighton, Steyning, Worthing, Westhampton, Westbourne, Havant, Portsea Island, Alverstoke, Fareham, South Stoneham, Southampton, New Forest, Isle of Wight, Lymington, Christchurch, Poole, Wareham, Weymouth, Bridport, Axminster, Honiton, Exeter, St. Thomas, Newton Abbot, Totnes, Kingsbridge, Plympton St. Mary, Plymouth East Stonehouse, Stoke Damerel, St. German's, Liskeard, St. Austell, Truro, Falmouth, Helston, Penzance.

Names of SIXTY-ONE Districts on the WEST COAST:—Redruth, St. Columb, Bodmin, Camelford, Stratton, Bideford, Barnstaple, Williton, Bridgwater, Axbridge, Bedminster, Bristol, Clifton, Thornbury, Dursley, Wheatonhurst, Gloucester, Westbury-on-Tyvern, Chepstow, Newport, Cardiff, Bridgand, Neath, Swansea, Llanelly, Carmarthen, Narberth, Pembroke, Haverfordwest, Cardigan, Aberayron, Aberystwith, Machynlleth, Dolgelly, Festiniog, Pwllheli, Carnarvon, Anglesey, Bangor, Conway, St. Asaph, Holywell, Great Boughton, Wirral, Ruabon, Liverpool, West Derby, Prescot, Warrington, Ormskirk, Preston, Fylde, Garstang, Lancaster, Ulverston, Bootle, Whitehaven, Cockermouth, Wigton, Carlisle, Longtown. The above include some districts situated on navigable parts of chief rivers.

* If the Deaths in the Districts of Newcastle-upon-Tyne and Gateshead in 1853 are included, the numbers will be 22,084 in England and Wales, 17,586 in the 208 Coast Districts, and 14,766 in the 100 East Coast Districts: the proportions to 10,000 living will be 12 in England and Wales, 23 in the 208 Coast Districts, and 34 in the 100 East Coast Districts.

† Excluding London (36 Districts) from the East Coast Districts, the Mortality will be 41 in 1849 and 12 in 1854 to 10,000 persons living.

10,000 of the population, while 4426 died of cholera in the 419 inland districts, making the mortality only 4 in 10,000.

A person living on the coast districts in the same conditions as the coast population, was thus in 1854 more likely to die of cholera in the proportion of 20 to 4 (or 5 to 1), than a person living inland. In 1849 these ratios were 50 to 17 (or 3 to 1); the law then announced is thus confirmed by the new observations.

If the coast districts are divided into three classes, the mortality it will be found was at the rate of 30 on the east coast, facing the continent, 10 on the west coast, and 5 on the south coast, out of every 10,000 of the population. Exclusive of the London districts the mortality by cholera in the districts of the east coast was at the rate of 12 in 10,000.

In 1849 the rates of mortality on the east coast were 53, on the west coast 49, on the south coast 39.

In the 47 districts, including the principal seaport towns (population 2,156,625), the mortality rate by cholera in 1854 was 23; in 41 of the principal inland town districts (population 2,240,192) 6; in the remaining 503 districts of the country 2, in 10,000. The mortality rates in these districts were as 23, 6, and 2 in 1854; and as 85, 38, and 12 in 1849. London, which partakes of the characters of both classes of towns, ex-

TABLE (13a).—Of the AREA, POPULATION, DEATHS FROM CHOLERA and DIARRHŒA in SEAPORT, INLAND-TOWN, LONDON, and COUNTRY DISTRICTS.*

| | AREA in Acres. | POPULATION enumerated. | | Deaths. | | | |
|---|----------------------|---------------------------|------------|---------------|--------|----------------|-------|
| | | 1841 | 1851 | FROM CHOLERA. | | FROM DIARRHŒA. | |

| 47 Districts, including the principal Seaport Towns (except London) - - - | 2,528,234 | 1,778,814 | 2,156,625 | 17,708 | 5,337* | 3,499 | 8,008 |
| London (comprising 36 Districts) - - | 78,029 | 1,948,417 | 2,362,236 | 14,137 | 10,738 | 3,899 | 3,147 |
| 41 Districts, comprising the principal Inland Towns - - - | 1,718,918 | 1,980,871 | 2,340,192 | 8,193 | 1,470 | 3,840 | 4,682 |
| The remaining 508 Districts of the Country | 32,977,644 | 10,356,546 | 11,168,556 | 13,380 | 2,503 | 7,649 | 9,137 |

* For names of Districts see Tables 14 and 15, pp. 84-5.

† This number includes 1927 Deaths from Cholera in the Districts of Gateshead and Newcastle-upon-Tyne, which occurred in 1853.

TABLE (13b).—Of the INCREASE and DENSITY of POPULATION, MORTALITY from ALL CAUSES and from CHOLERA and DIARRHŒA in SEAPORT, INLAND-TOWN, LONDON, and COUNTRY DISTRICTS.

| | POPULATION. | | | Deaths to 10,000 living, from | | | | | |
|---|---|----------------------|------|-------------------------------|----------|------|-----------|------|--|
| | Annual Increase per Cent. 1841 to 1851. | Density. | | All Causes, 1841-50 | CHOLERA. | | DIARRHŒA. | | |
| | | Persons to 10 Acres. | | | 1849 | 1854 | 1849 | 1854 | |
| | | 1849 | 1854 | | | | | | |
| 47 Districts, including the principal Seaport Towns (except London) - | 1.983 | 9 | 9 | 232.2 | 84.9 | 23.2 | 16.8 | 15.4 | |
| London (comprising 36 Districts) - | 1.975 | 298 | 322 | 245.5 | 61.9 | 42.7 | 17.1 | 12.5 | |
| 41 Districts, comprising the principal Inland Towns - | 1.628 | 13 | 14 | 235.4 | 37.5 | 6.2 | 17.6 | 19.9 | |
| The remaining 508 Districts of the Country - | .872 | 8 | 8 | 206.4 | 12.1 | 2.2 | 7.0 | 8.0 | |

* The population used in obtaining the results given in this column is the arithmetical mean of the numbers enumerated in 1841 and 1851; in deducing the results given in the other columns a correction has been made for increase of population, based on the numbers enumerated in 1841 and 1851.

hibited in 1849 an intermediate cholera mortality rate of 62 in 10,000, but in 1854 the cholera mortality rate of London was 43, while that of the seaport towns was 23.

Diarrhoea in the year 1854 was more fatal (20) in the principal inland towns than it was in the principal seaport towns (13); while in 1849 it was nearly equally fatal in the two kinds of towns—18 and 17 in 10,000 inhabitants.

The mortality of the 41 large inland towns by cholera both in 1849 and in 1854 was higher than the mortality of the rest of the inland districts; and it fell in 1849 chiefly on six of those town districts: Wolverhampton, Merthyr Tydfil, Manchester, Salford, Leeds and Hunslet, where the mortality rate by cholera was 98 in 10,000 living, while in the 35 other town districts it was 11. In 1854 the cholera death rate was 9 in 10,000 living in the six districts; 5 in 10,000 in the other 35 town districts.

The 42 districts on the coalfields of England and Wales suffered severely from the epidemic in 1849, where to 10,000 living the deaths were 46 by cholera, and 13 by diarrhoea; while in 1854 the deaths to 10,000

TABLE (14).—Of Forty-seven SEAPORT-TOWN DISTRICTS OF ENGLAND.

| 6 large Inland Town Districts:— Wolverhampton, Merthyr Tydfil, Manchester, Salford, Leeds and Hunslet | 226,365 | 564,907 | 686,940 | 6,485 | 686 | 1,753 | 1,784 |
| 35 other Inland Towns | 1,490,653 | 1,365,464 | 1,583,252 | 1,706 | 604 | 2,067 | 2,806 |

| 6 large Inland Town Districts:— Wolverhampton, Merthyr Tydfil, Manchester, Salford, Leeds and Hunslet <th rowspan="3">Persons to 10 Acres in 1854.</th> <th rowspan="3">Annual Rate of Increase of Population per Cent. 1841-51.</th> <th colspan="4">Deaths to 10,000 Persons living.</th> | Persons to 10 Acres in 1854. | Annual Rate of Increase of Population per Cent. 1841-51. | Deaths to 10,000 Persons living. | | | |
|--|--|--|----------------------------------|------|-----------|------|
| | | | CHOLERA. | | DIARRHŒA. | |
| | | | 1849 | 1854 | 1849 | 1854 |
| 6 large Inland Town Districts:— Wolverhampton, Merthyr Tydfil, Manchester, Salford, Leeds and Hunslet | 32 | 2.013 | 96 | 9 | 26 | 24 |
| 35 other Inland Towns | 11 | 1.822 | 11 | 5 | 14 | 18 |

The two annexed tables (18*a* and 18*b*) show the relative mortality of some districts in 1832, 1849, and 1854; but as the registration of deaths and of their causes was not instituted in 1832, it is probable that the returns of that year are defective.

TABLE (17).—Of the MORTALITY from CHOLERA and DIARRHŒA on the COAL FIELDS of England in 1849 and 1854.

| | POPULATION enumerated. | | Annual Rate of Increase of Population per Cent. | Deaths. | | | | | | Mortality to 10,000 Persons living. | | | | | |

TABLE (18*b*).—Of the NUMBER of DEATHS from CHOLERA in 1854, in DISTRICTS in which the MORTALITY from CHOLERA was LESS in 1849 than in 1832.

| Place or District. | 1832 | | 1849 | | 1854 |
|-----------------------|-------------------|----------------------------|-------------------|----------------------------|-------|
| | Population, 1831. | Deaths from Cholera, 1832. | Population, 1851. | Deaths from Cholera, 1849. | |
| Exeter - - - - - | 26301 | 347 | 32323 | 44 | 10 |
| Plymouth - - - - | 31090 | 708 | 62231 | 686 | 69 |
| Gloucester - - - - | 11683 | 123 | 32045 | 110 | 48 |
| King's Lynn - - - - | 13370 | 49 | 20330 | 2 | 9 |
| Norwich - - - - - | 61110 | 120 | 66193 | 38 | 198 |
| Nottingham - - - - | 20390 | 296 | 58419 | 18 | 16 |
| Sheffield - - - - | 59011 | 402 | 108626 | 114 | 126 |
| Carlisle - - - - - | 20006 | 265 | 41537 | 51 | 21 |
| Newcastle-upon-Tyne - | 42760 | 801 | 89156 | 235 | *1431 |
| Sunderland - - - - | 17000 | 215 | 70376 | 363 | 42 |

* The 1431 include 1414 deaths in the year 1863, and only 17 deaths in 1854.

The water supply of Exeter in 1832 was derived from the Exe, and the water was impure; before the outbreak of the epidemic of 1849 better water was derived from another source. The water of Newcastle-upon-Tyne in the same way was impure in 1832 and 1854, and comparatively pure in 1849.

(4.) Sex and Age.

Males suffered more than females from cholera and diarrhoea at all ages under 25; at the ages of 25 to 45 the females suffered more than the males; at 45 to 55 the mortality rate of males was greater than the mortality rate of females in 1849, but in 1854 the rates were nearly equal; from the ages of 55 to 85 the old women suffered more than the old men; at the age of 85 and upwards the facts become too few to yield certain results, but they seem to show that proportionally more old men of 85 and

upwards die of cholera and diarrhœa, than old women at the same advanced age. It will be observed that the mortality of males and of females under 5 years of age, was nearly as high in 1854 as it was in 1849; and at the age of 75 and upwards the numbers that express the mortality in the two epidemics do not greatly differ. From the ages of 10 to 65 the mortality of 1849 was to the mortality of 1854 nearly as *three to 1* in both sexes.

(5.) *Elevation.*

It was shown by the investigations in the former report that the mortality of the cholera epidemic is highest on the land at the low mouths of rivers, and generally on the low ground of towns. It was also shown that in London the mortality increases as the ground on which the houses stand falls from Hampstead and from Norwood to the Thames. This important principle is confirmed by the observations in the present epidemic. I extract from the Weekly Report (December 2d, 1854, No. 48.) a short account of the results :—

It would be out of place, however, to discuss here fully the circumstances to which the decrease of mortality may be referred, or to attempt to resolve that important question,—perhaps the most important of the day,—“What is the cause of epidemic cholera?” Is it the effused flaky matter—from the Indian population on the delta of the Ganges, driven about like the clouds of a leavening dust in the air and in the waters,—that has reproduced itself, and has destroyed men, all over the world, either dwelling quietly in their houses, or encamped on hostile battle fields? Is it ozone, electricity, volcanic or any other agency? None of the facts in the weekly Tables affords a solution of these questions. But in the Report that was prepared at this office on the epidemic cholera of 1848-49 in England, certain conditions in which cholera is fatal were brought to light; and we have now in this second epidemic an opportunity of re-examining and testing those results.

And, first, with reference to the localities in which men live. The vast population of the Metropolis is diffused over 78,029 acres of ground, which is sub-divided into 36 districts and 135 sub-districts. The sub-districts vary in size from 25 acres to 5,057 acres; in population from 1632 persons to 47,881 persons; and in every one of these distinct sections of the population deaths from cholera occurred in 1849 and in 1854, except in the smallest, Dulwich, where, however, one person died of cholera in 1849.

The cause of cholera in its epidemic form was therefore some matter diffused over the 78,029 living acres of which London is composed; and no parish enjoys in the epidemic immunity from death by cholera, much less from the attacks either of severe cholera or of simple diarrhœa, which attend the deadlier forms of the disease.

But the fatality differed exceedingly; for in some sub-districts it destroyed 2, 4, 5, or 6 in every 10,000; in others it was fatal to 201, 206, 208, 211 or more in every 10,000 of the inhabitants. (*See Table, pp. 106-7.*)

TABLE (21).—Showing the MORTALITY by CHOLERA in 1849 and in the 1½ years 1853½-1854 of SIX PORTIONS of the POPULATION of LONDON living in SUB-DISTRICTS at Six different Elevations; and other Conditions.

| No. of Sub-Districts. | Elevation above Trinity High-water Mark of the Thames. | | Density. Persons to an Acre in 1851. | Annual Value of Houses. | Annual Rate of Increase per Cent. on Population 1841-51. | Mortality by CHOLERA and DIARRHOEA, 1853½-1854. | | | Mortality by CHOLERA. | |

| 49 | Under 30 — | 5 | 27 | 32 | 2·178 | 88 | 31 | 119 | 103 | 96 |
| ALL LONDON | { 3 ft. below to 350 ft. above } | 39 | 30 | 41 | 1·962 | 46 | 25 | 71 | 62 | 54 |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |

The column 2 shows that the mean elevation of the sub-districts ranges between 100 feet and 350 feet; and the 2d column, that upon multiplying the population of each sub-district into its elevation, and dividing all the sums thus obtained by the sum of the population, the mean elevation at which the people lived in the six highest sub-districts is about 187 feet.

The population of London is not homogeneous; in each sub-district the people, as the returns show, differ from the rest of the population in wealth, ranging from penury to abundance, and implying great variations in food, lodging, clothing, firing, medical aid; in density; in the elevation of the ground on which they live over the water-mark of the Thames; in the drainage; in the water with which they are supplied; in the exposure to contamination; in the nuisances and churchyards which surround them; in the temperature, moisture, electricity, and other atmospherical conditions.

After arranging the several districts in the order of the mortality that they suffered from cholera, in the order of the density of population, in the order of the elevation of the ground, in the order of the house rent per head,—which is one of the best gauges of the wealth of the people that statistics furnishes,—it was found that the variations of density had some connexion with the mortality,—that wealth and poverty exercised more influence,—that unclean water was pernicious, and that in dealing with large numbers and many districts there was a certain relation between the diminution of the mortality of cholera and the elevation of the ground on which the people lived.

London is built, like ancient Rome, upon several small hills, and upon low reclaimed and imperfectly drained marsh ground, which extends from Fulham to Westminster, and again to Poplar on the north side of the Thames; and on the south side, from Battersea to Lambeth, Southwark, Newington, Camberwell, Bermondsey, Rotherhithe, Deptford, and Woolwich. From the river, covering 2,245 acres at the bottom of the great valley and from this low ground, the houses rise over undulating slopes, northwards to Hampstead Heath, which is 404 feet above the Thames, and southwards up to Norwood and Sydenham.

From the new Ordnance map of London, which was prepared at the instance of the Commission of Sewers, Colonel Dawson, in 1850, estimated, for the Registrar-General, the mean elevation of the 36 districts of London; and subsequently the elevation of the ground of the 135 sub-districts has been estimated approximately. The population in 1851 was ascertained at the census; the deaths by cholera were returned each week by the Registrars; and the following resulting facts show distinctly the inverse relation that the mortality of cholera bears to the elevation of the ground.

182,560 of the people of London in 1851 lived upon sub-districts covering 2,849 acres of the marsh ground, ranging from 3 feet below to 1 foot above the high-water mark; 2,693 died there of cholera in 1849, and 2,686 in 1853-1854, or 5,379 in the two epidemics.

263,914 of the population, in sub-districts on 13,146 acres of ground of 80 feet of elevation and upwards, lost 398 persons by cholera in 1849, and 356 in 1854, or 754 in the two epidemics.

13,569 persons died of cholera in the years 1849 and 1853-1854, on the 18,429 acres of low ground under 10 feet of elevation, out of a population of 595,119; while in the same years, out of the more numerous population, 682,705 persons, living on 21,909 acres of the higher ground of 60 feet and upwards, only 3,008 persons died of cholera, including all the deaths in the district of St. James.

On the lowest ground, taking the mean of the two epidemics, nearly *fifteen* in 1,000 of the population,—on the highest ground *one* in 1,000 of the population,—were destroyed by cholera.

At the intermediate stages of elevation was the danger of dying by cholera intermediate? To solve this important question, as regarded the epidemic of 1849, London was first sub-divided into terraces differing 20 feet in elevation; and if the same course is pursued now it is found that in the two epidemic years 16,416 persons died of cholera on the first terrace under 20 feet of elevation; 3,771 on the second terrace of ground, 20 and under 40 feet high; 2,371 on the third terrace, 40 and under 60 feet; 2,254 on the fourth terrace, 60 to 80 feet high; 424 on the fifth terrace, 80 to 100 feet; 330 on the higher terraces of 100 feet up to 350 feet. The population was 850,000 on the lowest terrace; and about equal, or 400,000, on the second, the third, and the fourth terraces; while it was 142,000 on the fifth, and 121,000 on the higher terrace or terraces.

After correcting for the increase of population, it is found that in 1849 the deaths by cholera in every 10,000 inhabitants were 103, 65, 45, 25, 20, and 12, on each terrace respectively, commencing at the lowest; while on the same sites in 1853-1854, the mortality was 88, 32, 17, 28, 10, and 13. If the mean mortality is taken, the series becomes 96, 49, 31, 26, 15, and 13; which corresponds nearly with a series calculated on the hypothesis that the mortality by cholera in any two districts is, on the large scale, *inversely as their elevation*, to the numbers expressing which a certain *constant number* is added.

If we divide the mean mortality on the first or lowest terrace by 1, 2, 3, 4, 5, and 7 respectively, this series is obtained, 96, 48, 32, 24, 19, and 14; which represents closely the series exhibiting the mortality on the second, third, fourth, fifth, and the seventh terrace, each rising 20 feet in elevation. The house-ground from 100 to 350 feet is on an average about 137 feet high, and may be fairly represented by a *seventh* terrace,—120-140 feet. The sum of the hypothetical series is 233; of the other 230.

By applying this rule to the mortality of 1854 the series becomes 88, 44, 29, 22, 18, and 13. The mortality on the *first* and *seventh* terraces is in the relation of 1 and $\frac{1}{7}$; in the others there is a disturbance; the mortality on the fourth terrace is above, on the second, third, and fifth, below, that indicated by the elevation. The deviations from the law are in opposite directions; and in this single year nearly counterbalance each other.

It will be observed in the Table, that, besides the elevation, the density of the population in 1851, the annual value of houses, the rate of mortality from all causes,

and the rate at which the population increased from 1841 to 1851, are given. But no such fixed relation is found between the density of population or the annual value of their houses as is observed between the mortality by cholera and the elevation of the ground on which the people dwell.

If the ground is divided, as in Table (22), into fourteen stages or terraces, the mean mortality in the two epidemics is, if we commence on the lowest ground, 145, 108, 95, 88, 55, 44, 51, 32, 29, 31, 22, 16, 14, 13 in every 10,000 inhabitants.

Mr. Glaisher has shown that the meteorological conditions vary greatly in London at the several degrees of elevation. *Cholerae*, or any other organic matters, mechanically suspended either in the air or in the waters of London, necessarily accumulate in the lower strata.

(6.) Impure Water.

The effect of impure water has also been determined. For an account of the Indian opinion on the effects of water, and of Dr. Snow's theory,

TABLE (22).—Showing the MORTALITY by CHOLERA in 1849 and in the 14 years 1853-1854 of FOURTEEN SECTIONS of the POPULATION of LONDON living in SUB-DISTRICTS at FOURTEEN different STAGES of ELEVATION; also other Conditions.

* The numbers in this line are the sums of the numbers in the four lines below. The last line (—3—1) is to be read thus: the mean elevations of the lowest sub-districts range from three feet below to one foot above Trinity High-water Mark.

NOTE.—The numbers of deaths from cholera and diarrhœa in the epidemic of 1853-4 are now corrected from the Tables which were prepared for the Board of Health.

as well as a short account of the facts which he had collected, I refer to the Cholera Report (pp. lxxvi.—viii.)

Independently of any regard to theory, it appeared to be desirable to determine the effects of the different waters on the population of London during the impending cholera epidemic; accordingly the following circular was addressed by Mr. Mann to the Secretaries of the several Water Companies:—

Sir,

General Registrar Office, 13th October 1853.

The Registrar General will feel obliged if you will answer the accompanying inquiries for the public information.

I have the honour to be, Sir,

Your obedient servant,

(Signed) T. MANN.

To the Secretary of _____ Water Company.

1. What is the source from which the Water Company obtains the water for the supply of the London districts? If wholly or partly from a river or running stream, state at what point the supply is taken.
2. Is it the same as it was in 1849?
3. Are the methods of filtration and purification the same as those in use in 1849?
4. Is the area of supply the same?
5. If any changes have been made in either of the above particulars, what are the date and nature of those changes?
6. If any change is contemplated in the existing arrangements, what is its nature, and when is it likely to come into operation?

A detailed abstract of the answers of the secretaries was published in a supplement to the Weekly Return, No. 47. November 19, 1853; and the general result was thus summed up.

From the returns received from the Water Companies it appears that cholera finds London, as regards water, in the situation in which it left it. This holds true with reference to all except the Lambeth Waterworks Company, who changed their source of supply nearly two years ago from Lambeth to Thames Ditton; and from a Table subjoined it will be seen that the results of the present epidemic in the districts supplied by that company, as compared with some others, are rather more satisfactory than they were in 1849, an improvement which, it is hoped, in the further course of events will be maintained. But new works undertaken by other companies in accordance with recent legislation are in progress. The return of cholera at an earlier period than was anticipated furnishes a motive for increased activity in their operations. With capital, public spirit, and natural advantages of locality, London may enjoy a pure and copious supply of this first necessary of life, as well as country towns and villages, and more than some towns with municipal institutions where the burgesses are too idle, or too busy, or too poor to bring it from surrounding springs to their doors. Manchester has set a good example, and it is only necessary that the national intelligence should be generally awakened to the question, for this great end—a good water supply—to be accomplished both in town and country.

| Water Companies. | Sources of Supply. | Aggregate of Districts supplied chiefly by the respective Water Companies. | | | Deaths to 100,000 Inhabitants. |
|--------------------------|--|--|-----------------------------|---|--------------------------------|
| | | Elevation in feet above Trinity High-water Mark. | Population enumerated 1851. | Deaths from Cholera in 13 Weeks ending Nov. 13, 1853. | |
| LONDON - - - | - - - - - | - | 2,862,236 | 636 | 27 |

| West Middlesex - - | The Thames, at Barnes - | 72 | 277,700 | 73 | 26 |
| East London - - - | The river Lee, at Lee Bridge - | 20 | 484,894 | 194 | 20 |
| Lambeth and Southwark. | The Thames, at Thames Ditton and at Battersea. | 1 | 346,383 | 193 | 53 |
| Southwark - - - | The Thames, at Battersea - | 8 | 118,267 | 100 | 85 |
| Southwark and Kent - | The Thames, at Battersea, The Ravensbourne in Kent, and ditches and wells. | - | 17,906 | 18 | 101 |

It is believed that through nearly the whole of this Table the impurity of the waters with which the inhabitants of the several districts are supplied is in nearly a direct proportion to the mortality from cholera.

The water at St. Thomas's Hospital is thus described by Dr. R. Dundas Thomson, the Professor of Chemistry :—

The water as delivered at the pipe in the Laboratory of St. Thomas's Hospital on the 11th November was quite turbid, as it usually is, and contained diffused through it 1·16 grains of vegetable matter, dried at a steam heat, consisting principally of silica, the chief constituent of the shields of the lower class of plants. But as in its moist state it contained at least two thirds of its weight of water, we cannot estimate the filth in the water, which could be removed by filtration, at less than 3½ grains per gallon.

The influence of the water became more evident ; and was discussed in the supplement to the Weekly Return (December 3d, 1853), from which the following Table is taken :—

MORTALITY FROM CHOLERA IN DISTRICTS SUPPLIED BY DIFFERENT WATER COMPANIES.

| Water Companies. | Sources of Supply. | Aggregate of Districts supplied chiefly by the respective Water Companies. | | | Deaths to 100,000 Inhabitants. |
|------------------------------------|--|--|-----------------------------|---|--------------------------------|
| | | Elevation in feet above Trinity High-water Mark. | Population enumerated 1851. | Deaths from Cholera in 14 Weeks ending Nov. 29, 1853. | |
| LONDON - - - | - - - - - | 30 | 2,302,236 | 744 | 32 |
| * (1) Hampstead and (2) New River. | Springs at Hampstead and Kenwood, two artesian wells, and New River. | 80 | 106,956 | 8 | 5 |
| New River - - - | At Chadwell Springs in Hertfordshire, from river Lee, and four wells in Middlesex and Herts. | 76 | 634,468 | 56 | 9 |
| Grand Junction - - | The Thames, 360 yards above New Bridge. | 38 | 100,636 | 16 | 15 |
| Chelsea - - - | The Thames, at Battersea - | 7 | 122,147 | 22 | 18 |
| Kent - - - | The Ravensbourne in Kent - | 18 | 134,200 | 81 | 23 |
| West Middlesex - - | The Thames, at Barnes - - | 72 | 277,700 | 89 | 32 |
| East London - - - | The river Lee, at Lee Bridge - | 26 | 494,694 | 103 | 37 |
| * (1) Lambeth and (2) Southwark. | The Thames, at Thames Ditton and at Battersea. | 1 | 346,968 | 220 | 64 |
| Southwark - - - | The Thames, at Battersea - | 8 | 118,267 | 121 | 102 |
| * (1) Southwark and (2) Kent. | The Thames, at Battersea, the Ravensbourne in Kent, and ditches and wells. | - | 17,805 | 19 | 107 |

* In three cases (marked with an asterisk) the same districts are supplied by two companies.

After correcting the above Table and the tables of cholera 1848-49, for the effects of elevation, it is found that a large residual mortality remains, which is fairly referable to the impurity of the water ; for it is least where the water is known to be sweetest, greatest where the water is known to be the most impure.

After the great loss of life in 1849, and the patient investigations of two able committees of the House of Commons, the present water companies were left in the undisturbed possession of the monopoly, which they enjoy, of selling the people of London water. In the present state of engineering and sanatory science, purer waters from gathering grounds, or from springs, could probably be procured, and be supplied at cheaper rates by new companies, or by the incorporated rate-payers. But this would disturb the values of large masses of invested capital. To avoid such a result, always undesirable, the supply is left in the hands of the existing companies ; but by Act of Parliament they are prohibited from obtaining supplies from the tidal waters of the Thames and Lee, after certain fixed dates.

It is enacted, that it shall not be lawful "after those dates" to distribute the pernicious waters over London. It unfortunately happens that in the invasion of cholera with which we are threatened next year (1854), every parish, except those which the Lambeth Company supplies, may receive waters as bad as those of 1849 without a direct violation of the Act of Parliament.

But the Water Companies will do well to bear in mind that the dates in the Act are the extreme limits of time beyond which they can supply London with impure water without a direct violation of the law. They may complete the works in half the time. They can accelerate their progress. And the returns which they have furnished will enable us to appreciate their zeal and spirit in the public service under an extraordinary emergency.

Instead of the distant dates of 31st August 1855, 1856, and 1857, which were fixed when the return of cholera was not contemplated, the companies should aim at supplying London with the water which they are then bound to furnish, at a date not later than the first of July 1854. This would probably be the means of saving thousands of lives, and entitle the directors to the public gratitude.

Dates after which it will not be "lawful" for the Water Companies to supply waters from the same sources, or of the same quality, as at present (1853), to the inhabitants of London :—

| | | | | |
|----------------|---|---|---|-------------------|
| New River | - | - | - | 30th June 1857. |
| Grand Junction | - | - | - | 31st August 1855. |
| Chelsea | - | - | - | 31st August 1856. |
| West Middlesex | - | - | - | 31st August 1855. |
| East London | - | - | - | August 1856. |
| Southwark | - | - | - | 31st August 1855. |

The Grand Junction and the Southwark Companies state that they propose to complete their works in 1854, a year before the limit prescribed by the legislature.

The cholera broke out again in 1854: the effects of the bad water were watched during the epidemic; and the general results of a special inquiry are thus described in the Weekly Return (October 14th, 1854).

INFLUENCE of the WATERS of LONDON on the MORTALITY of CHOLERA.

The present epidemic of cholera in London presents a favourable opportunity for determining the influence of waters of various degrees of impurity on the mortality of cholera :

In the Report on the epidemic of 1849 the following general results were obtained :

"In the six districts which are supplied with water taken from the Thames at Kew by the Grand Junction, and at Hammersmith by the West Middlesex, 15 in 10,000 inhabitants died from cholera, and the mortality ranged from 8 to 33."

"In the twenty districts supplied by the New River, the East London, and the Kent Companies with water from springs from the Lea and the Ravensbourne, 48 in 10,000 inhabitants died of cholera, and the mortality ranged from 19 to 96."

"In the twelve districts which are supplied with water taken by the Lambeth, the Chelsea, and the Southwark Companies from the Thames between Battersea and Waterloo Bridge, 123 in 10,000 inhabitants died of cholera, and the mortality ranged from 28 to 205."

"In the second group of districts cholera was three times as fatal; in the third, *eight times* as fatal as it was in the first; one, three, and eight express the relative virulence of the epidemic in the three conditions. The density of the population was greatest in the central group, and nearly the same in the first and third groups." *Reg. Gen. Cholera Report*, p. lxi.

A part of the excessive mortality is referable to the depression of the ground in the twelve districts.

The Lambeth Company, which in 1849 took up its supply from the Thames at the part where the water is most impure, has since January 1852 drawn its water from the Thames above the tidal flow, and has thus afforded an opportunity for ascertaining the effects of this great improvement.

It was observed in the first eruption (1853) of the present epidemic that the mortality was diminished in districts which were partially supplied by that company. (Supplement to Weekly Return November 19th 1853.)

On October 13th, 1853, a circular had been sent to the London Water Companies, and the replies of all, except the Lambeth Company, showed that their new works and improvements had not then been carried out, as they were only bound under the Act of Parliament to complete them in 1855, 1856, or 1857.*

The Southwark Company, which now supplies the most impure water stated, however, that though the Act "allowed three years from August 1852 for the execution of the new works, the contracts for the whole having been made immediately after the passing of the Act, and being now [October] in a rapid course of fulfilment, the works will be completed and in operation one year within the time it prescribes," that is in September 1854.

The hopes of the Company, notwithstanding their efforts on the approach of cholera, were defeated, the officers informed Lord Palmerston, by a concurrence of various causes, and the impure water of the Thames is still supplied by this Company.

Bermondsey, one of the south districts of London, is exclusively supplied with the impure water, and the deaths by cholera are already more numerous than they were in

* The Secretary of the East London Water Company in August 1854 wrote thus to Viscount Palmerston :—
"In reply to your Lordship's inquiry, what steps have been taken by the East London Waterworks Company to effect a remedy in regard to the water supplied by them, I am instructed to state that the Company has already expended 100,000*l.* in effecting improvements; the supply has, for two months past, been taken through a newly constructed aqueduct, from a point in the valley of the Lee, nearly three miles higher up than formerly; the sewage of the valley, so far as it can effect the purity of this Company's supply, has been diverted by an intercepting drain, and the whole of the water delivered is filtered. Further works are also in progress."

1849, while in the parish of Lambeth, which is supplied partly by the Southwark Company, and partly by the Lambeth Company, the mortality is much lower than it was in 1849.

DEATHS FROM CHOLERA.

| Districts. | In the year 1849. | | In the 14 weeks ending 14th Oct. 1854. | |
|------------|-------------------|-------|--|-----|
| Bermondsey | - | 734 | - | 829 |
| Lambeth | - | 1,618 | - | 904 |

But the pipes of the two Companies which were once in active competition often run down the same streets, and through the same sub-districts, so that alternate streets or houses in the same sub districts are supplied with the pure and the impure waters.

Dr. Snow, who has devoted much time to the investigation, having procured from this office the addresses of the persons who died of cholera in Kennington and some other sub-districts, states, as the result of an inquiry from house to house where the pipes of the Lambeth Water Company are intimately mixed with those of the Southwark Company, that, in the 7 weeks ending August 26th, of 600 deaths from cholera, 475 have happened in houses supplied by the Southwark Company; 89 in houses supplied by the Lambeth Company; 13 in houses supplied by pumps, wells, and springs; 8 in houses which derived their water directly from the Thames and from ditches.

The Registrars on the south side of London were instructed to inquire, in all cases of death by cholera, whether the house in which the patient was attacked was supplied by the Southwark, the Lambeth, or the Kent Companies, or with water from pumps, wells, ditches, or other sources. The inquiry was attended with considerable difficulty, as the information could not be obtained from hospitals or workhouses, and the informants and the householders themselves were often ignorant of the source of supply, as the water rate in the worst districts is paid by the landlord. The information was thus not obtained in 766 out of 3805 instances; but it was stated that in 3039 instances 2284 deaths occurred in houses supplied with the impure Thames water, 294 in the houses supplied by the Lambeth Company with the purer filtered Thames water. The disparity was observed week after week in the progress of the epidemic.

The total number of houses supplied by the Southwark Company is stated to be 40,046; by the Lambeth Company to be 26,107; consequently there were in 6 weeks 57 deaths in every 1000 houses supplied with impure water, and 11 in every 1000 supplied with the less impure or comparatively pure water.

It is deemed right at once to state these facts now the epidemic is declining; but the important inquiry can only be made complete in all its parts by the Board of Health, who have requested the respective companies to furnish street lists in every sub-district of the houses that they supply, with which the facts in the Registers of Deaths may be compared. The effects of elevation and other causes may be thus eliminated, and the fatal effects of impure water be precisely determined.

MORTALITY BY CHOLERA in the SOUTH DISTRICTS of LONDON during the Six Weeks—August 28 to October 7, 1854.

| | Inhabited Houses. | Population enumerated 1851. | Deaths from Cholera. | Mortality to every 100,000 Inhabitants. | Mortality to every 1,000 Houses. |

INFLUENCE of the WATER SUPPLY on the MORTALITY from CHOLERA in the SOUTH DISTRICTS of LONDON during the Six Weeks from August 28th to October 7th, 1854.

| Water Company. | Source of Supply. | Houses supplied. | Estimated Population of the Houses supplied. | Deaths registered by Cholera in Houses. | Mortality to every 100,000 Inhabitants. | Mortality to every 1,000 Houses. |
|---------------------|------------------------------|------------------|--|---|---|----------------------------------|
| Southwark Company - | The Thames at Battersea. | 40,046* | 208,518 | 2,284 | 887 | 57 |
| Lambeth Company - | The Thames at Thames Ditton. | 26,107 | 172,748 | 204 | 109 | 11 |
| Kent Company - | The Ravensbourne | 14,594 | 97,127 | 188 | 194 | 18 |

* There are, exclusive of this number, 634 consumers, viz., railways, distilleries, road watering, fires, flushing sewers, and trades generally, averaging per day 2386 gallons. (See 'Parliamentary return,' 'Metropolis Water,' dated 36th July 1854, No. 415.)

Note.—The sources of water supply was not ascertained in 786 instances. The water was said to be derived from pumps, wells, rivers, and other sources in 273 instances.

At the close of the epidemic the results of the observations on the water were finally summed up in the Weekly Return, December 9th, 1854.

The deaths of 26,088 people in London, out of two millions and a half, living in 135 sub-districts at elevations rising from 3 feet below to 350 feet above the high-water mark of the Thames, have shown how much more fatal the cholera is on low ground than it is on ground of a moderate elevation.

The rate of mortality is graduated by the elevation; and diminishes as we ascend from the lowest to the highest ground. So that, to give a familiar illustration, in the two epidemics in London, a premium of 9*l.* 6*s.* would have insured 1,000*l.* in the event of the death by cholera of a person of average condition dwelling on the lowest terrace, under 20 feet of elevation; and on the second terrace (20 to 40 feet) the same sum (1,000*l.*) would have been insured by 4*l.* 9*s.*; on the third terrace (40 to 60 feet) by 3*l.* 1*s.*; on the fourth by 2*l.* 6*s.*; on the fifth by 1*l.* 5*s.*; on the seventh by 1*l.* 3*s.*; and so on as far as the observations extend.

This general result is deduced by arranging 131 sub-districts in the order of the elevation of the dwelling-ground; and it does not imply that the mortality of cholera depends on the elements alone of which elevation is the measure and the expression: for assume that several causes contribute to the result in a given sub-district, and let the power with which each acts in producing the result be represented by A, B, C, D, &c., &c.; then if A varies in intensity, and a great number of sub-districts are arranged in the order of that intensity, it is evident that, although B, C, D, &c., vary also, and in numerous instances countervail or exaggerate the effects of A, still in the whole series the agency of A, if it is at all powerful, will be rendered apparent. By this method the investigation into the causes of the mortality of cholera has been conducted; and it will be shown by the same method that the variations in the density and in the wealth of the population of London have much less influence than was at first anticipated. But the effects of these and of other causes, and the modifications of the earth and atmosphere that elevation implies, shall be discussed at another time; and as the facts that have been collected on the influence of the water stand next in practical importance they may now be briefly stated.

It has been calculated that more than four million gallons of water evaporate daily from the Thames in its course through London; and besides the supply from wells, pumps, and streams, nine water companies in their returns state that they pumped on an average 60,614,420 gallons of water into 302,428 houses and a certain number of manufactories daily, during the year 1853. The water that flows through the houses and streets daily is probably double the weight of the population. It is pumped at intervals into reservoirs until it is withdrawn for cooking, for cleansing, for washing linen, for ablution, and in some cases for drink by the people. It thus comes into contact with the body in many ways and it gives off incessantly at its temperature, ranging from the freezing point to summer heat, vapors and effluvia into the atmosphere that is breathed in every room; while the residue is discharged to carry the dirt of the houses and the town-guano of the waterclosets into the sewers and the Thames.

A certain portion of the water of London is drawn by the New River Company from distant springs and wells in the basin of the Lea river, which is a tributary of the Thames; but a large quantity of the water of this company, as well as the whole of the water of the East London Company, is drawn from the Lea lower down its channel. The Lambeth Company draws its water from the Thames at Ditton above the tidal range, but the Grand Junction at Kew, the West Middlesex at Hammersmith, and still lower down, at Battersea, the Chelsea and the Southwark Companies draw up their water from a part where the Thames is now evidently contaminated by the sewers which discharge the drainage of the population into the river. The temperature of the water of the Thames ranged from 60° to 70° during the cholera epidemics, and the chemical composition and changes of the matters in its waters undoubtedly varied to a great extent; but the microscope and chemical analysis have confirmed the evidence of the senses, in showing

that the water which the Chelsea and the Southwark Companies draw at Battersea contains the greatest quantity of organic matter; that it is the most impure; and that fragments of the muscular fibre of food exist in the Southwark water. The other waters are of a better quality.

The mortality from cholera in the sub-districts of London is shown under two aspects; thus, the mean mortality of the districts wholly or partially supplied by the New River Company in the two epidemics was at the rate of 15, 28, 28, 46, and 70 in every 10,000 living on the successive terraces of elevation; and the mortality in the sub-districts that are supplied by other companies at corresponding elevations is found to differ from this scale, some in excess, others in defect.

In the supply by all the companies extensive improvements are projected, and in some cases have been partially carried out. The New River Company states in reply to an inquiry, that "works have been since June in operation to prevent sewage from Waltham, Ponder's-end, and Tottenham running into the River Lea, which before affected the pumping station at Tottenham." On the terrace of 60 to 80 feet elevation, containing Berwick-street, the cholera was more fatal (30) in 1854 than it was in 1849 when it was 25; but on the other elevations the mortality from cholera was less than it was before, in the proportion of 18, 42, 72, and 73, in 1849; and 11, 14, 19, and 67 in 1854, to every 10,000 inhabitants, at the respective elevations, supplied with water by the New River. A similar decrease is observed in the mortality of the sub-districts supplied by the East London Company, which has latterly drawn its water three miles higher up the River Lea, than it did in 1849.

The sub-districts that were supplied by the Grand Junction and by the West Middlesex Companies suffered much less from cholera in 1849 than the sub-districts of the New River and the East London; but in 1854 the mortality increased in the districts of the two former companies, and in all the districts that derive their water from the Thames, which from Kew down to Battersea and Chelsea has every year for the last five years received an increased quantity of town sewage.

The Lambeth Company has in the interval between the two epidemics changed the source of its supply from Hungerford Bridge to Thames Ditton, where the river is unpolluted by the London sewage; but the pipes of this company run into the same districts as those of the Southwark Company, against which it was at one time in active competition, so that a special method of inquiry must be here resorted to. The Tables 1. and 2. only show that the sub-districts that were supplied wholly or partially with the impure Thames water experienced a high and extraordinary mortality from cholera in 1849, and again in 1854.

The region of London south of the Thames is divided into 11 large districts, comprising 42 sub-districts, which extend from Putney in the west to Woolwich in the east,—from the large tract of low ground along the Thames to the heights of Norwood and Sydenham. Many houses in every district derive their water supply from wells, pumps, and tidal ditches; in addition to these sources Bermondsey, St. Olave, and Wandsworth are supplied almost exclusively by the Southwark Company; the Greenwich and the Lewisham districts chiefly by the Kent Company; in the streets of the other districts the pipes of the Lambeth and the Southwark Company—the one supplying water comparatively pure, the other impure—are so intermingled that neither the informants nor the Registrars knew in 823 cases out of 4,059 whether the house in which the death from cholera occurred obtained its water from the Lambeth, Southwark, or the Kent Company. The officers of the latter company themselves have stated that they experience almost insuperable difficulties in distinguishing the houses which they supply in every street. It is therefore evident, that in the general character of the houses, the means of the householders, the density of the population, and the elevation of their dwellings, the difference is not considerable. The water supply is the chief element in which there is an evident difference; one class of houses is now supplied by water from Ditton, the other by water which the Southwark Company draws from Battersea, where the Thames is contaminated by the London sewage. And what is the result?

In the 26,107 houses that derived the water from Ditton 313 deaths from cholera occurred in ten weeks; in the 40,046 houses that received the impure water from Battersea 2,443 persons it was ascertained died from cholera in the same time. The deaths in the latter districts exceeded by nearly 2,000 the deaths that would have occurred if cholera had only been as fatal as it was in the houses that derived their water from Ditton. The Registrars were probably in some cases misinformed, but there is reason to believe that no undue proportion of the deaths is referred to houses that the Southwark Company supplies.

The deaths are given in Table 3. as they were returned by the Registrars in the eleven districts; and it will be observed, that the balance of mortality is heaviest in every district against the impure water, to an extent that leaves little room for doubt on the mind.

Thus in *St. Saviour* Southwark, 280 of the deaths by cholera were in houses supplied by the Battersea water, 59 in houses supplied with the Ditton water. In the week ending September 2d the proportions were 58 to 11; in the week ending October 14th they were 9 to 1. In *St. Olave*, containing the hospitals, and in Bermondsey, an undue proportion is perhaps referred to Southwark, as the Registrars notice no cases in houses

that derived water from wells and ditches. In *St. George Southwark* 254 persons died of cholera in houses that were supplied with water from Battersea, 79 in houses that were supplied with water from Ditton; the proportions were 303 to 47 in Newington, 349 to 95 in Lambeth, 206 to 6 in Wandsworth and Clapham, 167 to 24 in Camberwell; and so the proportions ran week after week. And it will be observed that in Bermondsey, which is not entered by the Lambeth Company, 734 persons died by cholera in 1849, and 846 in 17 weeks of 1854; while in Lambeth, which was wholly supplied with impure water in 1849, the deaths in that year by cholera were 1618, while in 17 weeks of 1854, when it was partially supplied with a comparatively purer water, the deaths by cholera were only 935; of which about 4-fifths were in houses that received impure water.

Works are now in progress for procuring better water for Southwark and for the rest of London; and the salutary effects of the changes that have been already wrought justify us in anticipating that when London is well drained, and when the water companies supply London with the cool, pure, refreshing water of the streams from the high grounds of Middlesex, Hertford, and Surrey on the system of constant supply, the health of the metropolis will be improved, and under wise medical arrangements the devastations of cholera, if they recur, will be no longer terrible.

The next Table shows the effects of the water of the different companies, and the effect of the different elevations of the dwellings in districts supplied generally by the same companies.

TABLE I.—Showing the MORTALITY from CHOLERA in SUB-DISTRICTS of different ELEVATIONS, supplied chiefly with Water by Nine Companies, in 1849 and 1853-54.

| Signature of Water Companies. | Name of Company and Source of Supply. | Years. | MORTALITY by CHOLERA to every 10,000 Inhabitants. | | | | | | |
|-------------------------------|--|--------------|---|----------------|----------------|----------------|----------------|----------------|-----------------|
| | | | 80 feet and upwards. | 60 to 80 feet. | 40 to 60 feet. | 20 to 40 feet. | 10 to 20 feet. | 3 to 10 feet. | Under 3 feet. |

* The small figures of this Table represent the number of sub-districts at each elevation supplied by the respective Companies.
The Table may be read thus:—The *New River Company* supplied 14 sub-districts on an average elevation ranging from 60 to 80 feet above high-water mark, and in those sub-districts the mortality by cholera in 1849 was on an average 25 in 10,000 inhabitants; in 1854, 30 in 10,000 inhabitants. At the lower elevation of 40 to 60 feet the mortality by cholera in 17 sub-districts was 42 in 1849, and 14 in 1854, in every 10,000 inhabitants. For the names of the Sub-districts forming the above groups see pages 106-7.

TABLE 2.—Showing the mean MORTALITY from CHOLERA in the EPIDEMICS of 1849 and 1853-1854 in 131 Sub-districts of different Elevations, supplied chiefly with Water by Nine Companies.

| Elevation in Feet. | Companies by which the Water is supplied. | | | | | | | | | | |
|-----------------------|---|--------|---------|---------|---------|---------|---------|--------|----------|---------|--------|
| | N. | H. | E. | J. | W. | C. | S. | L. | S. & L. | K. & S. | Wells. |
| | Average Deaths by Cholera to every 10,000 Inhabitants in 1849 and 1854. | | | | | | | | | | |
| 80 and upwards | (8) 15 | (4) 13 | — | (2) 5 | (10) 11 | — | — | (4) 18 | — | — | — |
| 60 — 80 | (38) 28 | (2) 17 | (2) 20 | (10) 36 | (10) 19 | — | — | (2) 96 | — | — | (3) 3 |
| 40 — 60 | (34) 28 | — | (8) 32 | (4) 15 | — | — | — | — | 47 | 31 | — |
| 20 — 40 | (18) 46 | — | (30) 46 | — | (3) 41 | — | (3) 90 | — | (2) | (2) | — |
| 10 — 20 | (4) 70 | — | (8) 67 | — | (2) 26 | (12) 41 | (4) 51 | — | — | (4) 76 | (2) 52 |
| 3 — 10 | — | — | (4) 66 | (4) 52 | (8) 53 | (2) 63 | (6) 161 | — | (10) 96 | (4) 101 | — |
| Under 3 feet | — | — | (2) 46 | — | — | (2) 63 | (6) 171 | — | (24) 125 | — | — |

The small figures indicate the number of sub-districts multiplied by 2; as the mortality is the mean of two observations for each group of sub-districts.—Thus the mortality of sub-districts of the elevation of 80 feet and upwards, supplied with water by the New River Company, was 15 in 10,000 inhabitants, this being the average of the mortality of 4 sub-districts in 1849, and of the same 4 sub-districts in 1854, making 8 observations.

3. TABLE of DEATHS from CHOLERA in the Eleven Districts of LONDON on the SOUTH SIDE of the THAMES, distinguishing the Deaths in Houses supplied with Water by Three Water Companies, or by Wells, Pumps, &c.

| DISTRICTS. | Signatures of Companies by which the water is chiefly supplied. | DEATHS from CHOLERA. | | Of the Deaths from Cholera in 17 Weeks of 1854 it was found by inquiry in 10 Weeks that the subjoined numbers occurred in Houses of which the Water Supply was inquired into. | | | | | |
|------------------------|---|----------------------|---------------------|---|--|------------------|---------------|--|---------------------------------|
| | | 1849 (Year). | 1854 (17 Weeks). | TOTAL DEATHS investigated in 1854. | Deaths in Houses supplied with Water by— | | | | |
| | | | | | Southwark Company. | Lambeth Company. | Kent Company. | Wells, Pumps, Rivers, and other Sources. | Source of Supply unascertained. |

| Greenwich | K. | 718 | 563 | 441 | 4 | — | 161 | 85 | 191 |
| Lewisham | K. | 96 | 81 | 61 | — | 5 | 15 | 12 | 31 |
| TOTAL | — | 7137 | 5719 | 4059 | 2443 | 813 | 196 | 264 | 823 |

The Southwark Water Company, which obtains its supply from the Thames at Battersea near the Red House, supplied 40,046 houses in 1853.

The Lambeth Water Company obtains its supply from the Thames at Thames Ditton, about a mile and a half above Kingston, and three miles beyond the influence of the tide. This Company supplied 26,107 houses in 1853.

The Kent Water Company obtains its supply from the Ravensbourne below the Lewisham Mills. It supplied 14,594 houses in 1853.

The further inquiry to which reference has been made in the Weekly Returns, was undertaken at the instance of the Board of Health Committee for Scientific Inquiries*; and the general result, as stated in the lucid Report of Mr. Simon, the Medical Officer of the Board of Health, is: "the population drinking dirty water accordingly appears to have suffered $3\frac{1}{2}$ times as much mortality as the population drinking other water."

The results of this conclusive investigation of the Board of Health complete the inquiry.†

We have now learnt in England that the mortality of a settled population, or of such moving bodies of men as armies, in an epidemic of

* The Committee consisted of Arnott, Baly, Farr, Owen, and Simon.

† Report on the last two Cholera Epidemics as affected by the consumption of impure water. By the Medical Officer of the Board, p. 6.

cholera, is reduced to an insignificant fraction,—when they are lodged on places of some elevation—are supplied with pure water—are kept in generally favourable hygienic conditions—and obtain, when attacked by diarrhoea, immediate medical advice.

The practical importance of these results is evident, when we reflect that the disease which they show us how to combat, destroyed within seven years, in two epidemics, little less than *a quarter of a million* of the population of the United Kingdom at home, where its visitations were less deadly than they were in our army and navy, abroad and among other nations.

It is right to state that Dr. Snow by his hypothesis*, by his researches, and by his personal inquiries; that the Registrar General, by procuring information and by promoting inquiry; as well as the Board of Health by their Report; have all contributed in various ways to establish the fact, that the cholera matter or *cholerine*, where it is most fatal, is largely diffused through *water*, as well as through other channels.

I have the honour to be,

Sir,

Your obedient and humble Servant,

WILLIAM FARR.

The Registrar General.

* The following is a very brief outline of Dr. Snow's views as expressed in his last publication, *Cholera and the Water Supply in the South Districts of London*:

"The cholera commences as an affection of the alimentary canal, and not with general illness; there is no evidence of poisoning of the blood in this disease, except in some cases where secondary fever occurs; there is conclusive evidence that cholera may be communicated from person to person, and it follows, therefore, that the morbid matter which produces the disease is applied to the interior of the alimentary canal, where it increases and multiplies during the period of so-called incubation, and passes off, during the attack, to cause fresh cases when suitable opportunities occur. Various circumstances connected with the propagation of cholera seem in accordance with the above view of its pathology. Thus, it was observed to pass frequently from person to person in the crowded habitations of the poor, who eat, drink, cook, and sleep in the same apartment, and pay little or no regard to cleanliness, who live, in fact, under circumstances where the sudden and copious evacuations of cholera, soiling the bed and body linen, would not fail to contaminate the hands of the patient and his attendants, and be thence transferred to any food they might touch. The absence of colour and odour in the evacuations could not help to favour this result."

"It occurred to me, as soon as I began to entertain the above opinions, that if the cholera excreta could reproduce the disease in the way just mentioned, they might also do so when diffused in water taken as drink, and that unless this were the case, the whole of the phenomena of cholera, as an epidemic, could not be explained."

NOTE.—The column showing the mortality from Cholera in 1853-54 to 10,000 persons living appeared in the Report of the General Board of Health (see Report of the Committee for Scientific Inquiries in relation to the cholera epidemic of 1854, pp. 111-118), and is corrected for deaths from cholera in Hospitals and Workhouses. The water supply for the thirty-one Surrey Sub-districts has also been revised from returns published by the General Board of Health.

The several water companies are designated by letters, thus:—

| Name of Water Company. | Initial. | Name of Water Company. | Initial. |
|---------------------------|----------|---|----------|
| New River Company - - - - | N. | Hampstead Company - - - - | H. |
| Grand Junction " - - - - | J. | Southwark " - - - - | S. |
| Chelsea " - - - - | C. | Lambeth " - - - - | L. |
| West Middlesex " - - - - | W. | Kent " - - - - | K. |
| East London " - - - - | E. | Wells, pumps, and other sources - - - - | (Wells.) |

It will be understood that every District is supplied to some extent with water from pumps and wells besides those marked " (Wells).

The letters placed against the names of Sub-districts denote public Institutions within their limits; W stands for Workhouse; H for Hospital; L for Lunatic Asylum; P for Prison; w indicates a workhouse not belonging to the district, though situated therein.

The minus sign (-) before the figures indicates that the level is below Trinity High-water mark.

CHILDBEARINGS at Four Periods of Life in SWEDEN (1830-35).*

| Age. | WOMEN living at Two Enumerations 1830 & 1835. | CHILDBEARINGS in Five Years 1831-35. | Proportional Numbers | |
|-------|--|---|--|--|
| | | | Of 100 Women living the Numbers bearing Children annually. † | Women living to One Annual Childbearing. |
| 1 | 2 | 3 | 4 | 5 |
| 15-25 | 516,327 | 79,225 | 6.15 | 16.26 |
| 25-35 | 438,718 | 246,609 | 23.19 | 4.31 |
| 35-45 | 368,771 | 148,610 | 15.49 | 6.46 |
| 45-55 | 298,047 | 7,189 | .96 | 103.65 |
| 15-55 | 1,623,863 | 483,613 | 11.90 | 8.40 |

* See Registrar General's Sixth Annual Report, pp. 269-71, and p. 261.

† This column is derived by multiplying the number of childbearings in the five years 1831-5 (col. 3.) by 100, and then dividing by 2½ times the women living at the two enumerations 1830 and 1835 (col. 2.).

[The following Index furnishes a reference to the *Number* of each DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced : thus, East Ashford will be found under the letter E, and not under A, as Ashford, East.]
